Ultra-precision High Performance Cutting Oct 03 2022 This book contains the research report of the DFG Research Unit FOR 1845 (2014-2020) of the Universities of Bremen and Hannover. The thematic focus lies on speeding up ultra-precision machining technology by following a holistic approach to high-performance cutting. This includes ultra-precision milling at high spindle speeds (>10000 rpm), precision tool setting mechanisms for multi-cutting-edge diamond milling tools, magnetic levitation technology for high velocity feed axes, and dedicated control strategies for error identification and compensation at high speeds. Furthermore, automation and measurement aspects of the machine setup process especially for precision balancing of the spindle rotors are presented. Finally, it is demonstrated that how the developed technologies may be integrated into a common machine tool setup. The target audience primarily comprises research experts and practitioners in production engineering, but the book may also be of interest to graduate students alike.

Model Predictive Control System Design and Implementation Using MATLAB® Sep 02 2022 Model Predictive Control System Design and Implementation Using MATLAB® proposes methods for design and implementation of MPC systems using basis functions that confer the following advantages: - continuous- and discrete-time MPC problems solved in similar design frameworks; - a parsimonious parametric representation of the control trajectory gives rise to computationally efficient algorithms and better on-line performance; and - a more general discrete-time representation of MPC design that becomes identical to the traditional approach for an appropriate choice of parameters. After the theoretical presentation, coverage is given to three industrial applications. The subject of quadratic programming, often associated with the core optimization algorithms of MPC is also introduced and explained. The technical contents of this book is mainly based on advances in MPC using state-space models and basis functions. This volume includes numerous analytical examples and problems and MATLAB® programs and exercises.

Gas Production Operations May 06 2020 Book thoroughly treats the properties of natural gases and gas condensates, discusses the existing methods for calculating reservoir properties and predicting inflow performance. Flow through the piping system, including tubing and gathering lines is discussed as is the effects of two-phase flow and gas well dewatering. The steps involved in selecting gas compressors, including power requirements and number of stages is outlined. A total system analysis describes the total system approach to optimizing the entire production system with numerous examples illustrating the effects of tubing size, perforations, separator pressure, and compression. Information essential in day-to-day operations covers flow measuring, gas condensate reservoir behavior, field operations problems, and field gas processing. Detection of abnormal well performance, separator selection, and prediction of hydrate formation are illustrated.

Medical Anthropology Oct 23 2021 Intended as the primary text for introductory courses on medical anthropology, this book integrates human biological data relevant to health and disease with both evolutionary theory and the social environments that more often than not produce major challenges to health and survival. Because students who take this fastest-growing anthropology course come from a variety of disciplines (anthropology, biology, especially pre-med students, and health sciences, especially), the text does not assume anything beyond a basic high-school level familiarity with human biology and anthropology. The authors first present basic biological information on a particular health condition and then expand their analysis to include evolutionary, historical, and cross-cultural perspectives. Among the topics covered are nutrition, infectious disease, stress, reproductive health, behavioral disease, aging, race/racism and health, mental health, and healers and healing.

Hearing Impairment and Disability Dec 01 2019 "Much research has been conducted to provide researchers and hearing healthcare professionals with updated information in regard to hearing assessments, results interpretation and case management. This ongoing research is particularly imperative to guide clinicians with optimized methods in assessing and managing pediatric patients with hearing impairment and disability. As such, tremendous research efforts have been made in determining the most optimum methods in assessing hearing using both subjective and objective tests. Since hearing loss can occur due to disrupted peripheral and/or central auditory pathway, there is also a growing interest to study children with auditory processing disorder (APD). Even though notable achievements have been observed in understanding APD, more research is required, particularly in establishing a gold standard APD test and its specific interventions. Additionally, having an objective test such as speech-evoked auditory brainstem response is beneficial to understand how speech sounds are encoded within the brainstem region in hearing-impaired children, as well as in those with compromised neural function. In this book, we have gathered research from Malaysia and India in this field and hope it will be of interest to our readers"--

The Longing in Me Sep 09 2020 Do your desires have you going around in circles? You may be looking for fulfillment in all the wrong places. You vowed you'd never repeat the same mistakes—yet you find yourself right where you started. What is it that keeps drawing you back into the same old traps? The fact is, your longings are built from the blueprint of your needs: for protection, for love, for God. And those needs aren't going anywhere. Sheila speaks candidly about the trials in her life, including the heartache of her first marriage, and intertwines her story with the biblical saga of King David. As both Sheila's and David's stories make clear, some cravings are misguided, but they all stem from the same hunger—and they will haunt you until that hunger gets satisfied properly. If you keep reaching out to the wrong people at the wrong times in your own life, *The Longing in Me* will help you understand that your cravings are not the problem. It's where they lead you that makes all the difference.
