Artificial Intelligence in Education May 02 2020 This publication covers papers presented at AIED2009, part of an ongoing series of biennial international conferences for top quality research in intelligent systems and cognitive science for educational computing applications. The conference provides opportunities for the cross-fertilization of techniques from many fields that make up this interdisciplinary research area, including: artificial intelligence, computer science, cognitive and learning sciences, education, educational technology, psychology, philosophy, sociology, anthropology, linguistics, and the many domain-specific areas for which AIED systems have been designed and evaluated. AIED2009 focuses on the theme "Building learning systems that care: from knowledge representation to affective modelling". The key research question is how to tackle the complex issues related to building learning systems that care, ranging from representing knowledge and context to modelling social, cognitive, metacognitive, and affective dimensions. This requires multidisciplinary research that links theory and technology from artificial intelligence, cognitive science, and computer science with theory and practice from education and the social sciences.

Metacognition Mar 24 2022 Metacognition is the first textbook to focus on people's extraordinary ability to evaluate and control their cognitive processes. This comprehensive text covers both theoretical and empirical metacognitive research in educational, developmental, cognitive and applied psychology. Authors John Dunlosky and Janet Metcalfe address many of the key questions that have inspired scientists to pursue research in this domain. To answer these and many other questions, the authors assess major theoretical themes and programmatic research in the field. The authors also include chapters that define the scope of metacognition and cover its historical origins. Not only do they describe well-received theories about the nature of metacognition, but they also highlight unresolved mysteries currently on the cutting-edge of research. Key Features Emphasizes the practical relevance of theory and research in metacognition to learning with the use of "Application" boxes Introduces students to important questions that have yet to be answered by the metacognitive research literature with the inclusion of "Mystery" boxes Provides three easy-to-conduct demonstrations (e.g., tip-of-the-tongue experience, delayed-judgment-of-learning effect, etc.) that students can try themselves Offers brief biographies that introduce students to some of the most influential leaders in metacognition Includes a general summary at the

end of each chapter Intended Audience This text is an ideal resource for undergraduate cognitive psychology students. It also serves as comprehensive handbook for more advanced students and psychological scientists engaged in the study of metacognitive processes.
