[The Law of International Responsibility](#) Aug 05 2020 The law of international responsibility is one of international law's core foundational topics. Written by international experts, this book provides an overview of the modern law of international responsibility, both as it applies to states and to international organizations, with a focus on the ILC's work.

[ESP, Hauntings and Poltergeists](#) Aug 29 2022 This is a 30th Anniversary reprinting of a book that has been lauded by Newsweek and cited by numerous people -- from students of parapsychology to ghost hunters to celebrity paranormal investigators -- as the book that got them first interested and started on their paranormal journeys and studies. [ESP, Hauntings and Poltergeists](#), first published in 1986, is reprinted with minor changes and minimal updates [Note that the authors subsequent books have much of the update material already]. Writing the book during the height of the (now-defunct) accredited Master's degree program at John F. Kennedy University in the San Francisco Bay Area, parapsychologist Loyd Auerbach put together a true handbook for those interested in all forms of psychic phenomena and experiences, with a eye towards investigation of the paranormal (apparitions, hauntings and poltergeists). The material is presented in four sections with appendices. Section One is a "handbook" providing basic foundation knowledge of parapsychology and psychical research, psychic phenomena and experiences, and even the skeptical viewpoint. Section Two takes a look at Pop Culture -- from TV and film to science fiction and comic books -- and news and reality TV coverage of the topics. Section Three is a casebook of sorts, covering famous cases of hauntings (including an expose of the Amityville Horror case) as well as cases investigated by some of Auerbach's colleagues (and his own very first case). Section Four is the handbook for the would-be paranormal investigator / ghost hunter. It's a step by step manual that contradicts so much of what has been altered by television producers for reality TV. Coming from the 100+ years of field investigation of the paranormal by his predecessors, colleagues, and his own experience, this common sense guide will enable people to truly investigate, understand, and generally

resolve ghostly issues. Honest and direct, even if you think you know how to investigate, this section alone will enlighten you in ways you may not have imagined. Finally, the Appendices provide resources for any and all interested in the topics covered by the book. There are tools for the investigator in Appendix A. Appendix B provides an updated (2016) list of organizations and resources, a "Who Ya Gonna Call?" directory, as well as the questions you should ask to make sure the ghost hunters or parapsychologists you contact actually are trained or educated and know what they're talking about (and know what they're doing). Additional suggestions for furthering your education in Parapsychology and the paranormal is included in this section. Appendix C provides a long list of suggested reading materials. There have been a few additional more recent titles added to this appendix (2016) as a starting point for the 21st century. Once you read this book, you'll have a real understanding of what the real scientific researchers and investigators have been doing since the 19th century start of the field, how the best investigations are conducted, what parapsychologists generally think of apparitions, hauntings, and poltergeists, and so much more!

The Reality of ESP Jul 04 2020 On February 4, 1974, members of the Symbionese Liberation Army kidnapped nineteen-year-old newspaper heiress Patricia Hearst from her Berkeley, California apartment. Desperate to find her, the police called physicist Russell Targ and Pat Price, a psychic retired police commissioner. As Price turned the pages of the police mug book filled with hundreds of photos, suddenly he pointed to one of them and announced, "That's the ringleader." The man was Donald DeFreeze, who was indeed subsequently so identified. Price also described the type and location of the kidnap car, enabling the police to find it within minutes. That remarkable event is one reason Targ believes in ESP. Another occurred when his group made \$120,000 by forecasting for nine weeks in a row the changes in the silver-commodity futures market As a scientist, Targ demands proof. His experience is based on two decades of investigations at the Stanford Research Institute (SRI), which he cofounded with physicist Harold Puthoff in 1972. This twenty-million dollar program launched during the Cold War was supported by the CIA, NASA, the Defense Intelligence Agency, and Army and Air Force Intelligence. The experiments they conducted routinely presented results could have happened by chance less than once in a million. Targ describes four types of experiments: Remote Viewing, in which a person describes places and events independent of space and time. For example, while in California Price drew to scale a Soviet weapons factory at Semipalitinsk with great accuracy later confirmed by Satellite photography. In another remote viewing, Targ accurately sketched an airport in San Andreas, Columbia himself. Distant Mental Influence, where the thoughts of the experimenter can positively or negatively affect the physiology (heart rate, skin resistance, etc.) of a distant person. Whole field isolation, where someone in a state of sensory isolation accurately describes the visual experiences of someone else in another place Precognition and retrocausality, showing that the future can affect the past. That is, the elephant you see on television in the morning can be the cause of your having dreamed about elephants the previous night. Final chapters present evidence for survival after death; explain how ESP works based on the Buddhist/Hindu view of our selves as nonlocal, eternal awareness; discuss the ethics of exercising psychic abilities, and show us how to explore ESP ourselves. "I am convinced," Targ says, "that most people can learn to move from their ordinary mind to one not obstructed by conventional barriers of space and time. Who would not want to try that?"

Revisiting the Assessment of Second Language Abilities: From Theory to Practice May 02 2020

This book presents an overview of revisiting the assessment of language abilities. It also showcases how the measurement of such constructs can result in negative or positive washback and how outcomes might be conducive to repercussions that decide on the future of many stakeholders. The 23 chapters were selected among tens of chapters received from different contexts that addressed the issue of revisiting the assessment of language abilities, such as Tunisia, Ukraine, Algeria, Russia, KSA, Sudan, Egypt, Canada, Kurdistan, UK, USA, Iran, Turkey, etc. These contexts have highlighted the necessity to revisit the different constructs which should be assessed with a clear and straightforward foundation on students' learning objectives and their actual language ability. To do so, most of the chapters present hands-on use of relevant statistical tests that might serve in revisiting the construct definition both theoretically and operationally. Perhaps the sole and intricate question that the authors of these contributions ask is what it means to revisit the assessment of the construct of individualized language ability and how. In addition, the book accentuates the momentousness and significance of reflecting on test fairness and validation as the mainspring and backbone for democratization of assessment. This book appeals to a broad readership, such as English Language Teaching (ELT) practitioners, language teachers, students, testing organizations, policy-makers, test designers, writers of test specifications, testing experts, researchers, program evaluators, especially in the Middle East and North Africa (MENA) as well as other international contexts.

Chips 2020 Jan 28 2020 The chips in present-day cell phones already contain billions of sub-100-nanometer transistors. By 2020, however, we will see systems-on-chips with trillions of

10-nanometer transistors. But this will be the end of the miniaturization, because yet smaller transistors, containing just a few control atoms, are subject to statistical fluctuations and thus no longer useful. We also need to worry about a potential energy crisis, because in less than five years from now, with current chip technology, the internet alone would consume the total global electrical power! This book presents a new, sustainable roadmap towards ultra-low-energy (femto-Joule), high-performance electronics. The focus is on the energy-efficiency of the various chip functions: sensing, processing, and communication, in a top-down spirit involving new architectures such as silicon brains, ultra-low-voltage circuits, energy harvesting, and 3D silicon technologies. Recognized world leaders from industry and from the research community share their views of this nanoelectronics future. They discuss, among other things, ubiquitous communication based on mobile companions, health and care supported by autonomous implants and by personal carebots, safe and efficient mobility assisted by co-pilots equipped with intelligent micro-electromechanical systems, and internet-based education for a billion people from kindergarden to retirement. This book should help and interest all those who will have to make decisions associated with future electronics: students, graduates, educators, and researchers, as well as managers, investors, and policy makers. IoT Development for ESP32 and ESP8266 with JavaScript Jun 02 2020 This book introduces a new approach to embedded development, grounded in modern, industry-standard JavaScript. Using the same language that powers web browsers and Node.js, the Moddable SDK empowers IoT developers to apply many of the same tools and techniques used to build sophisticated websites and mobile apps. The Moddable SDK enables you to unlock the full potential of inexpensive microcontrollers like the ESP32 and ESP8266. Coding for these microcontrollers in C or C++ with the ESP-IDF and Arduino SDKs works for building basic products but doesn't scale to handle the increasingly complex IoT products that customers expect. The Moddable SDK adds the lightweight XS JavaScript engine to those traditional environments, accelerating development with JavaScript while keeping the performance benefits of a native SDK. Building user interfaces and communicating over the network are two areas where JavaScript really shines. IoT Development for ESP32 and ESP8266 with JavaScript shows you how to build responsive touch screen user interfaces using the Pui framework. You'll learn how easy it is to securely send and receive JSON data over Wi-Fi with elegant JavaScript APIs for common IoT protocols, including HTTP/HTTPS, WebSocket, MQTT, and mDNS. You'll also learn how to integrate common sensors and actuators, Bluetooth Low Energy (BLE), file systems, and more into your projects, and you'll see firsthand how JavaScript makes it easier to combine these diverse technologies. If you're an embedded C or C++ developer who has never worked in JavaScript, don't worry. This book includes an introduction to the JavaScript language just for embedded developers experienced with C or C++. What You'll Learn Building, installing, and debugging JavaScript projects on the ESP32 and ESP8266 Using modern JavaScript for all aspects of embedded development with the Moddable SDK Developing IoT products with animated user interfaces, touch input, networking, BLE, sensors, actuators, and more Who This Book Is For Professional embedded developers who want the speed, flexibility, and power of

web development in their embedded software work Makers who want a faster, easier way to build their hobby projects Web developers working in JavaScript who want to extend their skills to hardware products

How To Write ESP Materials Feb 08 2021 This is an essential title in the toolkit of any writer of English for Specific Purposes materials. No two English learners have the same requirements in the world of ESP. As a result, ESP teachers often find that generic published material doesn't work and that they need to write material for the specific needs of their students. This book examines the principle areas of concern for the ESP materials-writer: real-world tasks, authentic materials, vocabulary and ultimately the need to maximize opportunities for learners to improve language performance in their given professional environment. This book provides: - a simple but adaptable framework to help you design your own ESP materials, regardless of the area in which you teach.- examples from a wide variety of ESP fields.- practical tasks with detailed keys and a glossary.- a guide to highlight the different steps involved in producing your own ESP materials. This book forms part of the ELT Teacher 2 Writer training course. The course is designed to help you write better ELT materials, either for publication, or simply to improve the quality of your self-produced classroom materials
