Chapter 5 is findings : After going through with the data collected from source such as; learned courts, Hon'ble High Court and from the other institutions in which judges where posted and analyzed the following manner : According to age, legal domain, personal library, specialization etc.

Cybersecurity: Continued Federal Efforts are Needed to Protect Critical Systems and Information Aug 20 2021 Federal laws and policy have assigned important roles and responsibilities to the Dept. of Homeland Security (DHS) and the Nat. Inst. of Standards and Tech. (NIST) for securing computer networks and systems. DHS is charged with coordinating the protection of computer-reliant critical infrastructure -- much of which is owned by the private sector -- and securing its own computer systems, while NIST is responsible for developing standards and guidelines for implementing security controls over information and information systems. This report describes cybersecurity efforts at DHS and NIST -- including partnership activities with the private sector -- and the use of cybersecurity performance metrics in the fed. gov¿t. Table and graphs.

Assessing Information Needs Oct 22 2021 Provides a systematic method of identifying, evaluating and comparing information needs, as well as a framework to enable information services to gather information from users to aid information system design, and monitor the effectiveness of an information service. Examines the role of the Internet in meeting information needs.The section on collecting data now includes web log analysis and focus group interviews. Introduces the concept of the I-player, the digital information user.

Assessing Information Needs in the Age of the Digital Consumer Nov 22 2021 Aiming at ensuring that everyone obtains the rich rewards available in today's information-centred society, this book seeks to provide a systematic method for the understanding, appreciation and evaluation of information needs, which alone can guarantee the value of information to the consumer. Based on the insights gained from research projects involving hundreds of thousands of people, it sets out to provide a framework, firmly grounded in theory but nevertheless highly practical, for information needs analysis. The book is written both for librarians, publishers, archivists, records managers, journalists and other information professionals, to help them in their efforts to design improved systems and monitor the effectiveness of their services on an ongoing basis, and for individual information consumers, to

enable them better to meet their own information needs in the expanding sphere of virtual information.

Based on a tested model for community analysis, this book offers a guide to the management of client-centered transformative information services that can be applied in any type of library or information agency. • A case study of a community analysis for a county library system, illustrating how the model can be applied • 13 tables presenting information collected from the case study • Several graphic models, presented and described • References at the end of each chapter • A bibliography at the end of the book

Information Needs for Postattack Recovery Management Apr 27 2022 The study is concerned primarily with information needed for monitoring the effects of actions taken by governmental bodies at federal, state, and local levels in a postulated postattack period and for providing business management with the overall information it needs for making business decisions in the absence of undistorted indicators of economic developments. The break in traditional economic time series and the need for drastic reorientation of industrial efforts in the postattack period would greatly restrict the amount of information available and expand the amount needed. The imposition of controls; the need for well-directed investment by government, business, and private individuals; and the dominating economic significance of government public works expenditures for projects in the general interest would all complicate the decision process. These factors would all be highly relevant to information requirements for policy determination and for day-to-day operations in the first several months of the postattack period. Information requirements have thus been studied with such factors in mind and in the light of available information on plans for emergency agencies such as ODR (Office of Defense Resources); OES (Office of Economic Stabilization); and other relevant government agencies at federal, state, and local levels.

Exploring Information Needs for Wildland Fire and Fuels Management Aug 08 2020 We report the results of a questionnaire and workshop that sought to gain a better and deeper understanding of the contemporary information needs of wildland fire and fuels managers. Results from the questionnaire indicated that the decision to suppress a wildland fire was most often influenced by factors related to safety and that the decision to allow a fire to burn was influenced by a variety of factors that varied according to land management objectives. We also found that managers anticipated an increase in the use of wildland fire, but that these increases will be moderate due to a variety of constraints that will continue to limit the use of wildland fire. From the workshop, we learned that managers will need to become increasingly strategic with their fire and fuels management planning, and that the information used to support tactical fire operations may prove to be insufficient. Furthermore, the managers participating in the workshop indicated the functional linkage between land management and fire management planning is lacking. We suggest that effective fire management planning requires information on the benefits and risks to a wide variety of values at landscape scales, integration with land management objectives, and a long-term perspective.

Meeting Health Information Needs Outside of Healthcare addresses the challenges and ethical dilemmas concerning the delivery of health information to the general public in a variety of non-clinical settings, both in-person and via information technology, in settings from public and academic libraries to online communities and traditional and social media channels. Professionals working in a range of fields, including librarianship, computer science and health information technology, journalism, and health communication can be involved in providing consumer health information, or health information targeting laypeople. This volume clearly examines the properties of health information that make it particularly challenging information to provide in diverse settings. Addresses professional challenges and ethical problems of communicating health information to lay people in non-clinical settings Focuses on health information as a challenge for different professionals providing health information in different settings Emphasizes the shared challenges of information practice across different settings as well as those facing professionals in different roles

Information needs and Information seeking behaviour of Namibian pastors Oct 10 2020 This study investigates the information needs and seeking behaviour of pastors in Namibia. The purpose of this study is to establish the information required by pastors to carry out their work, how they seek information and the problems they encounter in doing so. A mixed-method approach research was used to meet the objectives of the study. A stratified quota sample of 200 pastors was used based on Walpole's formula for proportions. One hundred and thirty-eight (69%) participants responded to the questionnaire, while 16 pastors from different denominations in Windhoek, purposively selected as key informants, were interviewed. The Statistical Package for Social Sciences (SPSS) basic level descriptive statistics were used to analyse quantitative data from the questionnaires, while content analysis was used to analyse qualitative data from the interviews.

If you want to provide an information service that truly fulfils your users' needs, this book is essential reading. Analysing and assessing the information needs of clients is key to the provision of effective service and appropriate collections in both face-to-face and virtual library services. The importance of information needs analysis is widely recognized by information professionals, but currently there is little substantive, detailed work in the professional literature devoted to this important topic. This new book is designed to fill that gap, by supporting practitioners in developing an information needs analysis strategy, and offering the necessary professional skills and techniques to do so. It will offer guidance to team leaders and senior managers in all areas of library work, especially those involved in collection management, service provision and web development, and is equally applicable to the needs of academic, public, government, commercial and other more specialized library and information services. The text adopts a hands-on, jargon-free approach, and includes relevant examples, case studies, reader activities and sources of further reading. Key areas covered include: - what is information needs analysis? - how is needs analysis conducted? - what are the varieties of needs analysis? - how are analyses evaluated and reported? Readership: The book will be essential reading for library and information practitioners, team leaders and senior managers. It will also be a core text on

course reading lists in departments of library and information studies.
