PC Mag Jan 25 2022 PCMag.com is a leading authority on technology, delivering Labs-based, independent reviews of the latest products and services. Our expert industry analysis and practical solutions help you make better buying decisions and get more from technology.

Power Microelectronics: Device And Process Technologies (Second Edition) Jun 17 2021

'This is an excellent reference book for graduates or undergraduates studying semiconductor technology, or for working professionals who need a reference for detailed theory and working knowledge of processes in the field of power semiconductor devices.' IEEE Electrical Insulation Magazine This descriptive textbook provides a clear look at the theories and process technologies necessary for understanding the modern power semiconductor devices, i.e. from the fundamentals of p-n junction electrostatics, unipolar MOSFET and superjunction structures, bipolar IGBT, to the most recent wide bandgap SiC and GaN devices. It also covers their associated semiconductor process technologies. Real examples based on actual fabricated devices, with the process steps described in clear detail are especially useful. This book is suitable for university courses on power semiconductor or power electronic devices. Device designers and researchers will also find this book a good reference in their work, especially for those focusing on the advanced device development and design aspects.

PC Mag Sep 20 2021 PCMag.com is a leading authority on technology, delivering Labs-based, independent reviews of the latest products and services. Our expert industry analysis and practical solutions help you make better buying decisions and get more from technology.

Manual of Biological Markers of Disease Jul 31 2022 A comprehensive reference work: This looseleaf work is an authoritative compilation of methods for the detection of autoantibodies (Section A: Methods of Autoantibody Detection); the structure, function, and molecular and biochemical concepts of autoantigens (Section B: Autoantigens); and the clinical significance of measuring autoantibodies in patients with rheumatic, connective tissue and autoimmune diseases (Section C: Clinical Significance of Autoantibodies). This unique work brings together all the molecular and medical information - very difficult to retrieve otherwise - in ONE publication. The Editors and contributors are leading experts in the immunological, molecular biological, and clinical fields. The format of this looseleaf publication allows regular updating of data as well as inclusion of new advances in research on autoimmunity. Until now, the work (Basic work including Supplement 1) included Section A, and the larger part of Section B, both in an attractive and robust ringbinder. Audience: By nature and design of this exciting reference work, it is especially aimed at scientists, including immunologists, pathologists and molecular biologists, and clinical chemists, as well as clinicians specializing in rheumatic diseases and autoimmune disorders, inflammation or clinical immunology. Supplement 2: This supplement primarily contains Section C (Clinical Significance of Autoantibodies). As in the other sections, the contents are presented in a consistently structured manner, beautifully illustrated with photos and schematic figures. Extensive literature references are provided. Also, this supplement includes an addition to Section B (Autoantigens), being chapter B.1.5: The Antigens Defined by Antikeratin Antibodies (AKA).

PC Mag Jul 07 2020 PCMag.com is a leading authority on technology, delivering Labs-based, independent reviews of the latest products and services. Our expert industry analysis and practical solutions help you make better buying decisions and get more from technology.

Concise Manual of Hematology and Oncology Jun 29 2022 A real boon for medical practitioners from a number of disciplines, this is a practice-oriented manual of medical oncology and hematology for day-to-day use in caring for patients' hematologic and neoplastic diseases. It is founded on the longstanding experience of a large specialized university department accustomed to having to provide reliable advice in a broad range of circumstances. The authors have chosen not to give a comprehensive review of the various subjects but have instead focused on practical methods which have proven to be useful in their experience, with special emphasis on standardizing chemotherapy protocols.

Power Systems: Modelling and Control Applications Aug 08 2020 The control of power systems and power plants is a subject of worldwide interest which continues to sustain a high level of research, development and application. Papers pertaining to areas directly related to power systems and representing the state-of-the-art methods are included in this volume. The topics covered include security analysis, dynamic state estimation, voltage control, power plant control, stability analysis, data communication, expert systems and training simulators for power plants. This interchange between those involved in the research and those involved in the practical applications of new ideas and developments provide a comprehensive reference source for all involved in the power industry.

The PC-SIG Library Mar 27 2022 This monograph provides information about public domain and user-supported software for IBM compatible personal computers. The Personal Computer Software Interest Group (PC-SIG) has developed this software directory for people wanting to order software from, or submit software to, the PC-SIG Library. Six sections detail: an introduction to public domain and user-supported software; an introduction to the commands needed to run programs on the IBM

Disk Operating System (DOS); program descriptions; contents of available disks; indexes; and how to order disks and add programs to the PC-SIG Library. Glossary, program order forms, and software submission forms are included.

Vacuum Manual Nov 03 2022 Vacuum apparatus is widely used in research and industrial establishments for providing and monitoring the working environments required for the operation of many kinds of scientific instruments and process plant. The vacuum conditions needed range from the relatively coarse vacuum requirements in applications covering diverse fields such as food packaging, dentistry (investment casting), vacuum forming, vacuum metallurgical processes, vacuum impregnation, molecular distillation, vacuum drying and freeze drying etc. to the other extreme involving the highest possible vacuum as in particle accelerators, space technology -both in simulation and outer space, and research studies of atomically clean surfaces and pure condensed

metal films. Vacua commence with the rough vacuum region, i.e. from atmosphere to 100 Pa * passing 6 through medium vacuum of 100 Pa to 0.1 Pa and high vacuum of 0.1 Pa to 1 J.lPa (10- Pa) until ultra high vacuum is reached below 1 J.lPa to the limit of measurable pressure about 12 I pPa (10- Pa).
