*Interconnecting the Network of Networks May 02 2020 This book describes the transformation of telecommunications from national network monopolies to a new system, the "network of networks," and the glue that holds it together, interconnection. By their very nature, monopoly-owned networks provided a small number of standardized, nationwide services. Over the past two decades, however, new forces in the world economy began to unravel this traditional system. The driving force behind the change was the shift toward an information-based economy. Especially for large organizations, the price, control, security, and reliability of telecommunications became variables requiring organized attention. Thus, monopoly began to give way to the "network of networks," the foundation of today's telecommunications and Internet infrastructure. Taking a broad, multidisciplinary perspective Eli Noam discusses the importance and history of interconnection policy, as well as recent policy reforms both within the United States and around the globe. Other important topics he discusses include interconnection prices, the unbundling of interconnection, and the technology of interconnection. He concludes with an examination*

of social and policy issues, including the free flow of content, universal service and privacy protection, and the future of telecommunications.

*Factory-Constructed Housing Developments* Oct 07 2020 An attractive, lower-cost alternative to site-built homes, factory-constructed housing is becoming increasingly popular. New, more sophisticated methods of construction and strict federal, state, and local codes have resulted in safer, more attractive, and more affordable homes. Written by a specialist with over 20 years of experience in the field, *Factory-Constructed Housing Developments: Planning, Design, and Construction* fills the gaps in existing literature on the subject. Although some information on the design of small subdivisions and manufactured home communities can be found scattered throughout various government documents, until now there has been no single guide to the creation of new developments. This reference assembles and cites the existing literature, and adds to it useful information from the author's two decades of practical field experience. This one-stop reference explains the planning, development, and construction processes for factory-constructed housing, including everything from the roles of municipal boards, to roads and development configurations, to water and sewerage. The book also considers factors unique to manufactured home communities and modular home subdivisions. No other single volume contains the information in this book.
