The Insects Jan 28 2020 Insects represent over half of the planet's biological diversity. This popular textbook provides a comprehensive introduction to this extraordinary diversity, and places entomology central to the theory and practice of evolutionary and ecological studies. Fully revised, this fifth edition opens with a chapter concerning the popular side of insect studies, including insects in citizen science, zoos and butterfly houses, and insects as food for humans and animals. Key features of insect structure, function, behaviour, ecology and classification are integrated with appropriate molecular studies. Much of the book is organized around major biological themes: living on the ground, in water, on plants, in colonies, and as predators, parasites/parasitoids and prey insects. A strong evolutionary theme is maintained throughout. There is major revision to the chapter on systematics and a new chapter, *Insects in a Changing World*, includes insect responses to, and the consequences of, both climate change and human-assisted global alterations to distributions. Updated 'Taxoboxes' demonstrate topical issues and provide concise information on all aspects of each of the 28 major groupings (orders) of insects, plus the three orders of non-insect hexapods. New boxes describe a worrying increase in insect threats to landscape and commercial trees (including eucalypts, palms and coffee) and explain the value of genetic data, including evolutionary developmental biology and DNA barcoding, in insect biodiversity studies. The authors maintain the clarity and conciseness of earlier editions, and extend the profuse illustrations with new hand-drawn figures. Over 50 colour photographs, together with the informative text and an accompanying website with links to video clips, appendices, textboxes and further reading lists, encourage a deeper scientific study of insects. The book is intended as the principal text for students studying entomology, as well as a reference text for undergraduate and graduate courses in the fields of ecology, agriculture, fisheries and forestry, palaeontology, zoology, and medical and veterinary science.

Against the Death Penalty Feb 08 2021 It was discovered in the late 1980's among the papers of the descendants of his adopted daughter, and was published in Italian in 2014. In *Against the Death Penalty*, Peter Garnsey, a historian of the Roman Empire and Italy, provides the first English translation of this important yet forgotten text. Although Beccaria attacked the whole criminal justice system of his time, Pelli's work was singular in its focus on attacking on just the death penalty. As such, it was the first attack of any substance that appeared in Europe, and although unfinished, it is a work of considerable sophistication and depth. It is a comprehensive critique, considerably longer and more thorough than that of Beccaria. Pelli was also a man of religious convictions and operated within the Catholic tradition: for his key arguments he drew on the writings of the natural jurists, in particular Grotius and Pufendorf.
