Environmental Security and Ecoterrorism Sep 30 2022 In recent years, the concept of environmental security has been adapted to include preparedness for acts of ecoterrorism. This latter term has now become synonymous with environmental terrorism where the perpetrator uses the environment as a weapon to harm an opponent. The intended outcome is usually large-scale deaths, severe damage to the environment, and instilling fear in the general population. This book explores various facets of ecoterrorism including the role of the state in pursuing and maintaining environmental security, a review of the concept of ecoterrorism, food security challenges and weaknesses, technological countermeasures to enable rapid detection or response, and existing pollution sources and hazards that may serve as targets for terrorist acts. In sum, this volume provides a useful overview for both the layperson and experienced researchers.

The Myths of Security Oct 08 2020 If you think computer security has improved in recent years, *The Myths of Security* will shake you out of your complacency. Longtime security professional John Viega, formerly Chief Security Architect at McAfee, reports on the sorry state of the industry, and offers concrete suggestions for professionals and individuals confronting the issue. Why is security so bad? With many more people online than just a few years ago, there are more attackers -- and they're truly motivated. Attacks are sophisticated, subtle, and harder to detect than ever. But, as Viega notes, few people take the time to understand the situation and protect themselves accordingly. This book tells you: Why it's easier for bad guys to "own" your computer than you think Why anti-virus software doesn't work well -- and one simple way to fix it Whether Apple OS X is more secure than Windows What Windows needs to do better How to make strong authentication pervasive Why patch management is so bad Whether there's anything you can do about identity theft Five easy steps for fixing application security, and more Provocative, insightful, and always controversial, *The Myths of Security* not only addresses IT professionals who deal with security issues, but also speaks to Mac and PC users who spend time online.

Nanoscience Advances in CBRN Agents Detection, Information and Energy Security Nov 28 2019 The preparation and characterization of various nano-scaled materials and their applications in diverse security and safety-related fields. Readers are provided with a broad overview on the topic as it combines articles addressing the preparation and characterization of different nano-scaled materials (metals, oxides, glasses, polymers, carbon-based, etc.). The contributions derive from the lectures and contributions of the NATO Advanced Study Institute meeting "Nanoscience Advances in CBRN Agents Detection, Information and Energy Security" held in Sozopol, Bulgaria, 29 May - 6 June, 2014. In addition, it presents an interdisciplinary approach, utilizing Nanoscience and Nanotechnology research from different disciplines including; physics, chemistry, engineering, materials science and biology. A major advantage of this book, which represents the knowledge of experts from 20 countries, is the combination of longer papers introducing the basic knowledge on a certain topic, and brief contributions highlighting specific applications in different security areas.

Plasma for Bio-Decontamination, Medicine and Food Security Oct 20 2021 Non-thermal (cold) plasmas at atmospheric pressure have recently found many breakthrough applications in biology, medicine, and food security. Plasmas can efficiently kill bacteria, yeasts, moulds, spores, biofilms and other hazardous microorganisms, including potential bio-terrorism agents. They can be employed for bio-decontamination and sterilization of surfaces, medical instruments, water, air, food, even of living tissues without causing their damage. Direct or indirect plasma interaction with living cells of microorganisms or even humans enables novel bio-medical applications, e.g. treatment of skin diseases and ulcers. Plasma-enhanced blood coagulation coupled with its antiseptic properties proved success in wound healing and opens new possibilities in surgery, emergency medicine and military applications. Plasma treatment allows cell manipulations, their removal and targeted transfer into the injured area, which can accelerate wound healing. Plasma induced apoptosis (programmed cell death) of tumor cells brings forth a great potential for cancer treatment. Besides, plasma enables painless treatment of dental caries, root canal disinfection, and other dentistry applications. This book is a selection of reviewed manuscripts issuing from the NATO Advanced Research Workshop Plasma for bio-decontamination, medicine and food security held in Jasná, Slovakia, on 15-18 March 2011. It provides a comprehensive overview of the current knowledge and research activities focused at the plasma applications in areas such as bio-decontamination, water chemistry, effects on cells; biofilm inactivation, UV sterilization, and medicine, especially tissue treatment and wound healing, as well as dentistry and food security.
