Increasing Student Engagement and Retention Using Classroom Technologies Nov 30 2019 Classroom mediated discourse technologies are reshaping and reframing the practice of teaching and learning in higher education. This volume critically examines new research on how classroom mediation technologies like Learning Catalytics are being used in higher education to increase learner engagement and social leaning in the classroom.

Software Technologies Jun 29 2022 This book constitutes the thoroughly refereed proceedings of the 8th International Joint Conference on Software Technologies, ICISOFT 2013, held in Reykjavik, Iceland, in July 2013. The 19 revised full papers presented were carefully reviewed and selected from 121 paper submissions. The papers focus on the following research topics and applications: new software paradigm trends and mainstream software engineering and applications.

A Reader's Guide to Contemporary Literature May 29 2022

Advances in Computers Aug 27 2019 *Advances in Computers* covers new developments in computer technology. Most chapters present an overview of a current subfield within computers, with many citations, and often include new developments in the field by the authors of the individual chapters. Topics include hardware, software, theoretical underpinnings of computing, and novel applications of computers. This

current volume includes six chapters on hardware development in the educational market, intelligent search strategies, domain specific languages and trustworthiness and risks in computer technology. The book series is a valuable addition to university courses that emphasize the topics under discussion in that particular volume as well as belonging on the bookshelf of industrial practitioners who need to implement many of the technologies that are described. Trustworthiness and risks in computer technology K-12 educational use of inexpensive handheld devices Domain specific languages

Energy Abstracts for Policy Analysis Jan 13 2021

Force Method Optimization II. Volume II. User's Manual Sep 01 2022 This technical paper describes the Table Computation Program (TCP) developed to facilitate the manipulation and presentation of tabular information for analysis and analysis reporting purposes. This document includes an overview of how the program functions and instructions on how to use it. In addition, technical information is provided for those who may wish to modify or expand the program to satisfy unique requirements.

The Baptist Manual Jul 19 2021

What is Democracy and How Do We Study It? Jul 07 2020 Zooming in on one single research question - what is democracy?- this book highlights the unique ways that different approaches and methodologies grapple with developing answers.

Informatics Abstracts Sep 20 2021

Effective Polynomial Computation Oct 29 2019 Effective Polynomial Computation is an introduction to the algorithms of computer algebra. It discusses the basic algorithms for manipulating polynomials including factoring polynomials. These algorithms are discussed from both a theoretical and practical perspective. Those cases where theoretically optimal algorithms are inappropriate are discussed and the practical alternatives are explained. Effective Polynomial Computation provides much of the mathematical motivation of the algorithms discussed to help the reader appreciate the mathematical mechanisms underlying the algorithms, and so that the algorithms will not appear to be constructed

out of whole cloth. Preparatory to the discussion of algorithms for polynomials, the first third of this book discusses related issues in elementary number theory. These results are either used in later algorithms (e.g. the discussion of lattices and Diophantine approximation), or analogs of the number theoretic algorithms are used for polynomial problems (e.g. Euclidean algorithm and p-adic numbers). Among the unique features of Effective Polynomial Computation is the detailed material on greatest common divisor and factoring algorithms for sparse multivariate polynomials. In addition, both deterministic and probabilistic algorithms for irreducibility testing of polynomials are discussed.

Interlibrary Loan/Document Delivery and Customer Satisfaction Jan 25 2022 This book contains the results of the first and only multi-institution study of interlibrary loan and document delivery customer satisfaction among academic library patrons. By examining customer perceptions and ILL/DD activities, Interlibrary Loan/Document Delivery and Customer Satisfaction: Strategies for Redesigning Services allows library administrators and managers to better understand service needs and shows them where to best allocate resources. The volume includes current reports on workload and staffing in ILL, analysis of current ILL statistical software packages, reports of on-site software development, and suggestions for the future of ILL/DD services. As ILL and DD are the fastest growing services in academic libraries, having a tool that provides so much comparative data on service quality, efficiency, and effectiveness is crucial for librarians in search of solutions to an array of ILL/DD problems. Interlibrary Loan/Document Delivery and Customer Satisfaction is a valuable resource for academic librarians, public and special librarians struggling with ILL/DD issues, DD providers (commercial or otherwise), and students in the field of library and information studies. Readers become immersed in the issues as this book: describes the development of local software to reduce the tedious tasks involved in request fulfillment, freeing office personnel to tackle more difficult requests analyzes how important delivery speed is to academic ILL/DD requestors and suggests when investing additional

resources in improving delivery speed may be a waste of money provides comparative data on how many requests can be processed by the typical ILL office staff member debunks some long-held assumptions about delivery speed sets guidelines for efficiency and effectiveness proposes two strategies for redesigning ILL services to incorporate new developments in technology and innovative approaches toward long-standing, traditional services Interlibrary Loan/Document Delivery and Customer Satisfaction is useful not only to administrators interested in redesigning ILL and DD, but also to other libraries interested in comparing the speed and effectiveness of their service with some positively evaluated services provided by high-volume libraries. The software review helps providers implement the best choice of software for their offices and provides in-depth discussions about the strategies needed to further develop one's own software to reduce workload. At a time when the tenets of Total Quality Management and customer satisfaction are the focus of many managers, interlibrary loan and document delivery are transforming from peripheral services to primary services in the academic library. Interlibrary Loan/Document Delivery and Customer Satisfaction reflects the convergence of these trends and provides a great snapshot of services provided by a representative group of academic libraries.

Scientific and Technical Aerospace Reports Sep 08 2020

Robot Colonies Aug 08 2020 Robots in groups or colonies can exhibit an enormous variety and richness of behaviors which cannot be observed with singly autonomous systems. Of course, this is analogous to the amazing variety of group animal behaviors which can be observed in nature. In recent years more and more investigators have started to study these behaviors. The studies range from classifications and taxonomies of behaviors, to development of architectures which cause such group activities as flocking or swarming, and from emphasis on the role of intelligent agents in such groups to studies of learning and obstacle avoidance. There used to be a time when many robotics researchers would question those who were interested in working with teams of robots: 'Why are you worried about robotic teams when it's hard enough to just get one to work?'. This issue responds to that question. Robot Colonies provides a new approach to task problem-solving that is similar in many ways to distributed computing. Multiagent robotic teams offer the possibility of spatially distributed parallel and concurrent perception and action. A paradigm shift results when using multiple robots, providing a different perspective on how to carry out complex tasks. New issues such as interagent communications, spatial task distribution, heterogeneous or homogeneous societies, and interference management are now central to achieving coordinated and productive activity within a colony. Fortunately mobile robot hardware has evolved sufficiently in terms of both cost and robustness to enable these issues to be studied on actual robots and not merely in simulation. Robot Colonies presents a sampling of the research in this field. While capturing a reasonable representation of the most important work within this area, its objective is not to be a comprehensive survey, but rather to stimulate new research by exposing readers to the principles of robot group behaviors, architectures and theories. Robot Colonies is an edited volume of peer-reviewed original research comprising eight invited contributions by leading researchers. This research work has also been published as a special issue of *Autonomous Robots* (Volume 4, Number 1).

A Performance-related Specification for Hot-mixed Asphalt Nov 22 2021 TRB's National Cooperative Highway Research Program (NCHRP) Report 704: A Performance-Related Specification for Hot-Mixed Asphalt provides a proposed performance-related specification (PRS) for hot-mix asphalt (HMA) in the form of the Microsoft Windows-based Quality-Related Specification Software (QRSS). The QRSS is a stand-alone program for Microsoft Windows (versions XP and 7) that employs a database of pre-solved solutions of the Mechanistic-Empirical Pavement Design Guide. The program is capable of (1) calculating the predicted rutting, fatigue cracking, and low-temperature (thermal) cracking of an HMA pavement from the mix volumetric and binder and aggregate properties of the as-designed HMA (typically the job mix formula) and (2) comparing them with predictions calculated from the contractor's lot or sub-lot quality assurance data for the same properties.

GhostStalkers P.R.S. Guide into the paranormal Nov 03 2022 This is a manual for the new and young paranormal investigator beginner explaining the tool's of the trade and how to utilize them for a proper investigation, how to receive a class a evp, orb's what they are, and more to help the new paranormal investigator..

What is e-book? Oct 22 2021 The e-book guide for publishers: how to publish, EPUB format, ebook readers and suppliers. An electronic book (also e-book, ebook, electronic book, digital book) is a book-length publication in digital form, consisting of text, images, or both, and produced on, published through, and readable on computers or other electronic devices. An e-book can be purchased/borrowed, downloaded, and used immediately, whereas when one buys or borrows a book, one must go to a bookshop, a home library, or public library during limited hours, or wait for a delivery. Electronic publishing or ePublishing includes the digital publication of e-books and electronic articles, and the development of digital libraries and catalogues. EPUB (short for electronic publication; alternatively capitalized as ePub, ePUB, EPub, or epub, with "EPUB" preferred by the vendor) is a free and open e-book

standard by the International Digital Publishing Forum (IDPF). Self-publishing is the publication of any book or other media by the author of the work, without the involvement of an established third-party publisher. One of the greatest benefits brought about by ebooks software is the ability for anyone to create professional ebooks without having to fork out thousands of dollars to design and publish a book. People can easily become authors overnight and earn income from selling online ebooks.

Interactive Systems. Design, Specification, and Verification Dec 24 2021 This book constitutes the thoroughly refereed post-proceedings of the 10th International Workshop on Design, Specification, and Verification of Interactive Systems, DSV-IS 2003, held in Funchal, Madeira Island, Portugal, in June 2003. The 26 revised full papers and 5 revised short papers presented together with an invited paper have passed through two rounds of reviewing, selection, and improvement. The papers are organized in topical sections on test and evaluation, Web and groupware, tools and technologies, task modeling, model-based design, mobile and multiple devices, UML, and specification languages.

Supporting Air and Space Expeditionary Forces Aug 20 2021 RAND was asked by the U.S. Air Force to carry out analyses needed to determine alternatives for the use of CONUS Centralized Intermediate Repair

Facilities (CIRFs) that would provide increased maintenance efficiency (compared with traditional, decentralized structures) without reducing combat support capability. These CIRFs would provide off-equipment repair of propulsion and avionics components for the F-15, F-16, and A/OA-10. RAND developed an optimization-based analytic method for CIRF network design that identifies a range of cost-effective alternatives. Aircraft force structure bed-downs resulting from the 2005 Defense Base Closure and Realignment (BRAC) recommendations were used in the analyses, and all CONUS active duty bases and Air National Guard and Air Force Reserve Command installations were included, considering support to three tasking scenarios--normal peacetime training and readiness, Air and Space Expeditionary Force (AEF) deployment, and major regional conflicts (MRCs). General results from the analyses are: CONUS CIRF is a cost-effective maintenance strategy for nearly all commodities analyzed; potential manpower cost savings more than offset increased transport costs; CONUS CIRF total pipeline requirements generally are not excessive; many network designs are virtually equivalent in cost and performance; and large user bases are naturally attractive CONUS CIRF locations. The monograph also provides

commodity-specific results and recommendations.

User's Manual for IDA Feb 11 2021

Managing Software Deliverables Dec 12 2020 Managing Software Deliverables describes a set of proven processes for establishing an effective Software Program Management Office (SPMO) function in a corporate setting. Every business that has people performing Software Project Management (PM) activities has a need for these processes. In some instances, an organization may already have a PMO chartered with overall responsibility for each project managed in an enterprise. In those cases, this book will either provide validation of their efforts or it will provide some techniques and useful approaches that can be utilized to further improve on their overall implementation of the PMO. In the vast majority of cases in business, however, a PMO is unheard of. Each project managed in the enterprise is unfortunately managed separately from all others (at great cost in both time and money to the enterprise). Phase Roadmaps clearly depict what is expected by all parties at each phase of effort Pre-built Intranet is ready to deploy in a corporate setting and provides immediate use Process Methodology adheres to proven best-practices for software development
