Examination of the U.S. Air Force's Aircraft Sustainment Needs in the Future and Its Strategy to Meet Those Needs Mar 13 2021

The ability of the United States Air Force (USAF) to keep its aircraft operating at an acceptable operational tempo, in wartime and in peacetime, has been important to the Air Force since its inception. This

is a much larger issue for the Air Force today, having effectively been at war for 20 years, with its aircraft becoming increasingly more expensive to operate and maintain and with military budgets certain to further decrease. The enormously complex Air Force weapon system sustainment enterprise is currently constrained on many sides by laws, policies, regulations and procedures, relationships, and organizational issues emanating from Congress, the Department of Defense (DoD), and the Air Force itself. Against the back-drop of these stark realities, the Air Force requested the National Research Council (NRC) of the National Academies, under the auspices of the Air Force Studies Board to conduct and in-depth assessment of current and future Air Force weapon system sustainment initiatives and recommended future courses of action for consideration by the Air Force. Examination of the U.S. Air Force's Aircraft Sustainment Needs in the Future and Its Strategy to Meet Those Needs addresses the following topics: Assess current sustainment investments, infrastructure, and processes for adequacy in sustaining aging legacy systems and their support equipment. Determine if any modifications in policy are required and, if so, identify them and make recommendations for changes in Air Force regulations, policies, and strategies to accomplish the sustainment goals of the Air Force.

Determine if any modifications in technology efforts are required and, if so, identify them and make recommendations regarding the technology efforts that should be pursued because they could make positive impacts on the sustainment of the current and future systems and equipment of the Air Force. Determine if the Air Logistics Centers have the necessary resources (funding, manpower, skill sets, and technologies) and are equipped and organized to sustain legacy systems and equipment and the Air Force of tomorrow. Identify and make recommendations regarding incorporating sustainability into future aircraft designs.

The Cambridge Berlioz Encyclopedia Feb 09 2021 With over forty international specialist authors, this Encyclopedia covers all aspects of the life and work of Hector Berlioz. One of the most original composers of the nineteenth century, he was also internationally known as a pioneer of modern conducting, and as an entertaining author of memoirs, fiction, and criticism. His musical reputation has fluctuated, partly because his works rarely fit into conventional categories. As this Encyclopedia demonstrates, however, his influence on other composers, through his music and his orchestration treatise, was considerable, and extended into the twentieth century. The volume also covers Berlioz's connections with government officials and Paris concert societies and theatres, and contains information on his wide social circle including important literary figures. The Encyclopedia explores his fascination with foreign authors such as Shakespeare, Moore, and Goethe, and treats fully his promotion of his own and others' music, often at his own financial risk.
