The Science of the Mind Applied to Teaching May 20 2021 "It is an almost universally

accepted truth that a right education will secure virtue and power, and that virtue and power are the essentials of individual and national well-being. Education is then the supreme interest of the age. The proper interest in the cause of education is just beginning to be felt by all classes of people. It is because the principles which are presented in the following pages have been very helpful to me, and the hope that they may be so to others, that I present this volume to my fellow teachers. It has been prepared in the spirit of broadest liberality, appreciating the high aims and valuable thoughts of others. I have freely appropriated what I thought good from all sources; and I ask only the same from others--take the good and reject the spurious. The mental philosophy here employed is the system known as Phrenology. I have satisfied myself fully as to the correctness of its principles, and think that any one laying aside prejudice and investigating by observation will also be satisfied"--Preface. Drawing on his personal story, interviews and the latest scientific research Jacob Burak is on a quest 'to reduce the amount of noise in his life', the noise that comes from constantly comparing ourselves to others; the need to belong; the urge to achieve; and the anxiety and uncertainty of life itself. Burak draws on his experiences as a highly successful businessman and on in-depth interviews to explain how we perceive, process and amplify 'noise'. More importantly, he helps us identify the sources of these disturbances and the steps we can take to suppress them, so that we can lead more peaceful, more productive and happier lives. Subjects covered include: What are the ten rules for happiness that are entirely under our control? Why do negative events affect us more than positive events? Why do smart people make stupid mistakes? What
