**The Internet to the Inner-Net** Jun 07 2020 The Internet has become humanity's invisible central nervous system, connecting us at the speed of thought. More people today have access to mobile phones than have access to clean drinking water. Yet the most important technology is still the one within us: our brain, body, and consciousness. A fast-paced career in the high-tech industry combined with a deep yoga and meditation practice has allowed Gopi Kallayil—Google's Chief Evangelist for Brand Marketing and one of the leading voices encouraging yoga and mindfulness in the workplace today—to integrate his inner and outer technologies to a remarkable degree. Wisdom from his yoga mat and meditation cushion guides his professional career, and his work life provides the perfect classroom to deepen his wisdom practice. The Internet to the Inner-Net guides the rest of us to do the same. In some three dozen wide-ranging, sometimes provocative essays, Gopi shares his experiments in conscious living and offers insight, inspiration, and rituals—including yoga, mindful eating, and even napping—to help us access our own inner worlds. If you're looking for grounded practical wisdom that might simultaneously help you become more creative, adaptable, enthusiastic, effective, or resilient, you'll find it in this user's manual for the technology within—along with colorful insight into the successful Google culture. In five sections, from "Log In" (which offers mindful ways of connecting and engaging) to "Clear Out Your In-Box" (shedding what doesn't serve you to make space for what does) to "Thank You for Subscribing" (a reminder to live with gratitude), Gopi lays out practices and perspectives that you can use starting right now to live with more purpose, fulfillment, and joy.

**Mixed Integer Nonlinear Programming** May 31 2022 Many engineering, operations, and scientific applications include a mixture of discrete and continuous decision variables and nonlinear relationships involving the decision variables that have a pronounced effect on the set of feasible and optimal solutions. Mixed-integer nonlinear programming (MINLP) problems combine the numerical difficulties of handling nonlinear functions with the challenge of optimizing in the context of nonconvex functions and discrete variables. MINLP is one of the most flexible modeling paradigms available for optimization; but because its scope is so broad, in the most general cases it is hopelessly intractable. Nonetheless, an expanding body of researchers and practitioners — including chemical engineers, operations researchers, industrial engineers, mechanical engineers, economists, statisticians, computer scientists, operations managers, and mathematical programmers — are interested in solving large-scale MINLP instances.

**Making Sense** May 07 2020 Fiction is fascinating. All it provides us with is black letters on white pages, yet while we read we do not have the impression that we are merely perceiving abstract characters. Instead, we see the protagonists before our inner eye and hear their voices. Descriptions of sumptuous meals make our mouths water, we feel physically repelled by depictions of violence or are aroused by the erotic details of sexual conquests. We submerge ourselves in the fictional world that no longer stays on the paper but comes to life in our imagination. Reading turns into an out-of-the-body experience or, rather, an in-another-body experience, for we perceive the portrayed world not only through the protagonist's eyes but also through his ears, nose, tongue, and skin. In other words, we move through the literary text as if through a virtual reality. How does literature achieve this trick? How does it turn mere letters into vividly experienced worlds? This study argues that techniques of sensuous writing contribute decisively to bringing the text to life in the reader's imagination. In detailed interpretations of British novels of the 1980s and 1990s by writers such as John Berger, John Banville, Salman Rushdie, Jeanette Winterson, or J. M. Coetzee, it uncovers literary strategies for turning the sensuous experience into words and for conveying it to the reader, demonstrating how we make sense in, and of, literature. Both readers interested in the contemporary novel and in the sensuousness of the reading experience will profit from this innovative study that not only analyses the interest of contemporary authors in the senses but also pin-points literary entry points for the sensuous force of reading.

**Modernity's Classics** Jun 27 2019 This book presents critical studies of modern reconfigurations of conceptions of the past, of the 'classical', and of national heritage. Its scope is global (China, India, Egypt, Iran, Judaism, the Greco-Roman world) and inter-disciplinary (textual philology, history of art and architecture, philosophy, gardening). Its emphasis is on the complexity of the modernization process and of reactions to it: ideas and technologies travelled from India to Iran and from Japan to China, while reactions show tensions between museumization and the recreation of 'presence'. It challenges readers to rethink the assumptions of the disciplines in which they were trained

**How Reliable is Your Product?** Oct 12 2020 Traditionally, the way to test a product's reliability was to build it--and then try to break it. As systems and technologies improved, TAAF (Test, Analyze and Fix) methodologies were developed and adopted. In today's global economy, with its short, technologically-intense product life cycles, TAAF cannot suffice. Reliability can no longer be a step or a series of steps in product development; it is something that needs to be acknowledged up front and built into the product from its very conception. Reliability, in other words, must be 'designed in.' Product developers now have many tools--software and hardware--at their disposal for building reliability in from the get go. From the organizational point of view, what better way to design in reliability than to make designers themselves responsible for the reliability of their designs? As "Mike Silverman" explains in "How Reliable is Your Product?," this is why the role of the reliability engineer is changing to one of mentor. Product developers are now responsible for going out and finding the best testing tools and then training the designers on their use, so that designers factor and build in reliability at every stage of product design. Mike has focused on reliability throughout his 25-year career, and has observed the position of reliability in the organization evolve. In this book, he condenses his expertise and experience into a volume of immense practical worth to the engineering and engineering management communities including designers, manufacturing engineers and reliability/quality engineers. Among other things, Mike discusses how reliability fits, or should fit, within the product design cycle. He provides a high-level overview of reliability techniques available to engineers today. He lucidly discusses the design of experiments and the role of failure management. With case studies and narratives from personal experience, Mike discusses optimal ways to utilize different reliability techniques. He highlights common errors of judgment, missteps and sub-optimal decisions that are often made within organizations on the path to total reliability. With "How Reliable is Your Product?" "Mike Silverman" has delivered what few have done before--a comprehensive yet succinct overview of the field of reliability engineering and testing. Engineers and engineering managers will find much in this book of immediate, practical value.

*The IEEE Guide to Writing in the Engineering and Technical Fields* Feb 13 2021 Helps both engineers and students improve their writing skills by learning to analyze target audience, tone, and purpose in order to effectively write technical documents This book introduces students and practicing engineers to all the components of writing in the workplace. It teaches readers how considerations of audience and purpose govern the structure of their documents within particular work settings. The IEEE Guide to Writing in the Engineering and Technical Fields is broken up into two sections: "Writing in Engineering Organizations" and "What Can You Do With Writing?" The first section helps readers approach their writing in a logical and persuasive way as well as analyze their purpose for writing. The second section demonstrates how to distinguish rhetorical situations and the generic forms to inform, train, persuade, and collaborate. The emergence of the global workplace has brought with it an increasingly important role for effective technical communication. Engineers more often need to work in cross-functional teams with people in different disciplines, in different countries, and in different parts of the world. Engineers must know how to communicate in a rapidly evolving global environment, as both practitioners of global English and developers of technical documents. Effective communication is critical in these settings. The IEEE Guide to Writing in the Engineering and Technical Fields Addresses the increasing demand for technical writing courses geared toward engineers Allows readers to perfect their writing skills in order to present knowledge and ideas to clients, government, and general public Covers topics most important to the working engineer, and includes sample documents Includes a companion website that offers engineering documents based on real projects The IEEE Guide to Engineering Communication is a handbook developed specifically for engineers and engineering students. Using an argumentation framework, the handbook presents information about forms of engineering communication in a clear and accessible format. This book introduces both forms that are characteristic of the engineering workplace and principles of logic and rhetoric that underlie these forms. As a result, students and practicing engineers can improve their writing in any situation they encounter, because they can use these principles to analyze audience, purpose, tone, and form.

**LEED® for Homes-- Pilot Study** Dec 02 2019 Army participation in the LEED(registered name) for Homes Pilot Program is intended to facilitate preparations and transition from SPiRiT to LEED for Homes as soon as it is ready for adoption. The pilot program will coincide with U.S. Green Building Council (USGBC) development of the LEED for Homes evaluation tool. The Office of the Assistant Chief of Staff (Installation Management) Housing Division has overall responsibility for the transition and has selected Norfolk District, Center of Standardization for Family Housing to facilitate and coordinate participation in the LEED for Homes Pilot Program. A team consisting of Army personnel experienced in Army Family Housing (AFH) and/or sustainability conducted site visits to AFH at Fort Lee, VA and Fort Huachuca, AZ. Both installations have a history of successful AFH projects and current projects under construction that used SPiRiT as a sustainability rating tool. LEED for Homes was applied to each AFH project. Further, each credit was evaluated for applicability to Army projects and its ease of application using current design guidelines. Where appropriate, feedback was provided to the USGBC regarding issues, concerns, or clarifications on particular credits. The team also defined several Innovation and Design credits that could universally apply to AFH projects.
