Advances in Engineering Design and Optimization III Nov 04 2022 These are the proceedings of the third International Conference on Engineering Design and Optimization (ICEDO 2012), held on May 25-27th 2012 in Shaoxing (P.R. China). Volume is indexed by Thomson Reuters CPCI-S (WoS). The 278 peer-reviewed papers are grouped into 4 chapters: Engineering Design - Theory and Practice; Product Design and Development;

Manufacturing Systems Modeling and Optimization; Advanced Machining and Materials Processing Technology

**"Smart Technologies" for Society, State**

**and Economy** Sep 29 2019 This proceedings book presents a comprehensive view of "smart" technologies and perspectives of their application in various areas of economic activity. The authors of the book combined the results of the cutting-edge research on the topic of "smart" technologies in the digital economy and Industry 4.0 and developed a unified scientific concept. The current experience has been considered, and the prospects for the application of "smart" technologies in society to promote social advance have been identified. "Smart" technologies in public administration and law, as well as the experience in development of e-government, have been examined. "Smart" technologies in business activity have been studied, and the transition from digital business to business 4.0 has been justified. The book contains the collection of the best works following the results of the 13th International Research-to-Practice Conference "Smart Technologies" for society, state and economy which was run by the Institute of Scientific Communications (ISC) and was held on July 2-3, 2020. The target audience of this book includes researchers investigating fundamental and applied problems of development of "smart" technologies, as well as concerned parties outside the academic community, in particular, representatives of the digital society, high-tech business entities and officials

regulating the digital economy and Industry 4.0.

**Technology Transfer and Economic Growth in Sub-Sahara African Countries** Dec 13

2020 This book provides a pragmatic analytical model grounded on the solid idea that technologies and the accompanying implementation efforts only make sense if they are successfully deployed in markets. The analytical model also provides an exhaustive analysis of all critical variables at the global, regional and national levels, which contribute to failure or success of technology transfer efforts. The model is validated by an incisive analysis of technology transfer experiences of Japan, Korea, Singapore, Taiwan (province of China), and Malaysia. While this book finds that these East Asian countries have had both diverging and converging models, and experiences with technology transfer, the enduring and fundamental aspects of technology transfer in specific industrial sectors and economic growth in these countries is then used to draw lessons for African countries. This book therefore is a timely and compelling piece of research work that provides valuable answers to the increasingly urgent question of how African countries can industrialize through technology transfer to meet their economic development and growth ideals.

*The Korean Automotive Industry, Volume 1* Dec 25 2021 In 1962, South Korea assembled just 1,100 new automobiles. By 1996, this total had soared to 2,812,714. What explains this remarkable growth? The answer is complex, and involves a combination of a supportive State, timely technology alliances, a skilled but historically low-paid workforce, aggressive pricing, savvy entrepreneurs, and fortuitous circumstances. Despite this amazing ascent, comparatively little has been written about the Korean auto industry in English. In the first of a two-volume set, this 11-chapter book seeks to help fill this void by providing in-depth examinations of all six of Korea's automakers from their beginnings through 1996. Uniquely written from the perspective of industry analysts at the time (without knowledge of the Asian Fiscal Crisis), the book should prove informative to practitioners, scholars, and students interested in automotive history,

international political economy, Asian studies, and more. A.J. Jacobs is Professor of Sociology at East Carolina University, USA.

**Issues in Transportation Research and**

**Application: 2013 Edition** Sep 02 2022

Issues in Transportation Research and Application: 2013 Edition is a ScholarlyEditions™ book that delivers timely, authoritative, and comprehensive information about Transport Geography. The editors have built Issues in Transportation Research and Application: 2013 Edition on the vast information databases of ScholarlyNews.™ You can expect the information about Transport Geography in this book to be deeper than what you can access anywhere else, as well as consistently reliable, authoritative, informed, and relevant. The content of Issues in Transportation Research and Application: 2013 Edition has been produced by the world's leading scientists, engineers, analysts, research institutions, and companies. All of the content is from peer-reviewed sources, and all of it is written, assembled, and edited by the editors at ScholarlyEditions™ and available exclusively from us. You now have a source you can cite with authority, confidence, and credibility.

More information is available at <http://www.ScholarlyEditions.com/>.

Internal Combustion Engines Jan 02 2020 This book presents the papers from the Internal Combustion Engines: Performance, fuel economy and emissions held in London, UK. This popular international conference from the Institution of Mechanical Engineers provides a forum for IC engine experts looking closely at developments for personal transport applications, though many of the drivers of change apply to light and heavy duty, on and off highway, transport and other sectors. These are exciting times to be working in the IC engine field. With the move towards downsizing, advances in FIE and alternative fuels, new engine architectures and the introduction of Euro 6 in 2014, there are plenty of challenges. The aim remains to reduce both CO2 emissions and the dependence on oil-derivate fossil fuels whilst meeting the future, more stringent constraints on gaseous and particulate material emissions as set by EU, North American and

Japanese regulations. How will technology developments enhance performance and shape the next generation of designs? The book introduces compression and internal combustion engines' applications, followed by chapters on the challenges faced by alternative

fuels and fuel delivery. The remaining chapters explore current improvements in combustion, pollution prevention strategies and data comparisons. presents the latest requirements and challenges for personal transport applications gives an insight into the technical advances and research going on in the IC

Engines field provides the latest developments in compression and spark ignition engines for light and heavy-duty applications, automotive and other markets
