Leadership and Growth Nov 01 2022 Does leadership affect economic growth and development? Is leadership an exogenous determinant or an endogenous outcome of growth and development processes? Can we differentiate between the two? Do leaders decisions and actions vary in importance over various stages in the process, at least in successful cases? How important is choosing the right economic model? To what extent does leadership affect the explicit or implicit time horizons of policy choices? Is leadership an important determinant of inclusiveness in growth? In what ways do leaders build consensus or institutions to allow time for the economic plan to work? What challenges does economic success generate? How do successful leaders adapt to new problems such as income inequality and a rising middle class? Does the creation of new institutions play any role in solving these problems? Why do leaders often choose second best political economic compromises in economic development? This book has been prepared for the Commission on Growth and Development to evaluate the state of knowledge on the relationship between leadership and economic growth. It does not pretend to provide all the answers, but does review the evidence, identify insights and offers examples of leaders making decisions and acting in ways that enhance economic growth. It examines a variety of topics including leaders roles in: promoting national unity, building good solid institutions, choosing innovative and localized policies, and creating political consensus for long run policy implementation. Written by prominent academics and actual policy makers, Leadership and Growth seeks to create a better understanding of the role of leadership in growth and to encourage further studies of the role of leadership in economic growth.

Minimalism and Beyond Mar 01 2020 The Minimalist Program is just that, a "program". It is a challenge for syntacticians to reexamine the constructs of their models and ask what is minimally needed in order to accomplish the essential task of syntax – interfacing between form and meaning. This volume pushes Minimalism to its empirical and theoretical limits, and brings together some of the most innovative and radical ideas to have emerged in the attempt to reduce Universal Grammar to the bare output conditions imposed by these conceptually necessary interfaces. The contributors include both leading theoreticians and well-known practitioners of minimalism; the papers thus both respond to broad questions about the nature of human language and the architecture of grammar, and provide careful analyses of specific linguistic problems. Overarching issues of syntactic computation are considered, such as the role of formal features, the mechanics of movement and the property of displacement, the construction of words and phrases, the nature of Spell-Out, and, more generally, the forces driving operations. The volume has the potential to reach a wide audience, favoring inter-theoretical debate with a concise state-of-the-art panorama on Minimalism and advances about its future developments.

40 Sonnets Sep 26 2019 This collection, which won the 2015 Costa Poetry Award, is an exhibition of the Dundee-born poet's stunningly accomplished adoption of the sonnet's ancient structure This collection from Don Paterson, his first since the Forward Prize – winning Rain in 2009, is a series of forty luminous sonnets. Some take a traditional form, while others experiment with the reader's conception of the sonnet, but they all share the lyrical intelligence and musical gift that has made Paterson one of our most celebrated poets. Addressed to friends and enemies, the living and the dead, children, musicians, poets, and dogs, these poems are as ambitious in their scope and tonal range as in the breadth of their concerns. Here, voices call home from the blackout and the airlock, the storm cave and the s é ance, the coal shed, the war, the highway, the forest, and the sea. These are voices frustrated by distance and darkness, which ring with the "sound that fades up from the hiss, / like a glass some random downdraught had set ringing, / now full of its only note, its lonely call." In 40 Sonnets, Paterson returns to some of his central themes—contradiction and strangeness, tension and transformation, the dream world, and the divided self—in some of the most powerful and formally assured poems of his career.

Biodiversity and Natural Product Diversity Jan 11 2021 This, the most recent contribution to the Tetrahedron Organic Chemistry series, provides an integrated evaluation of the diversity of natural products in relation to biodiversity. The ongoing exploitation of biological resources, while maintaining an effective equilibrium on Earth, depends much on the conservation of biodiversity. To this end, parts one and two focus on biodiversity from all viewpoints, while explaining the link with natural products. The third section concentrates on the molecular-shape level, as a link to ecosystem and biodiversity, while the fourth section tackles actual functionalization, as a link to biodiversity at species level. Part five addresses the diversification of these resources from biotechnology and chemical technology, while the final part is concerned with maintaining natural product diversity on Earth.

Glial Cell Function (Paperback) Apr 13 2021 Although knowledge of the development and differentiation of glial cells has significantly increased in recent years, there are still many questions unanswered. The first section of the book is devoted to this very active topic and includes contributions on Schwann cells, oligodendrocytes, astroglia and microglia. The second section of the book covers cellular interactions, the role they play on myelination and remyelination, how these interactions take place and the molecules involved. The third section of this volume focuses on the interactions of neurons with glial cells and their role in brain function. Neuron-glia cross talk appears to be fundamental for synaptic transmission and several chapters in this section address this topic. The topic of how glial cells react to brain injury and how they participate in neuroprotection and brain repair is covered in section four of this book. As our knowledge about the molecules involved in the regenerative properties of glia increases, new avenues are open for the use of genetically modified glia with therapeutic purposes. The final section of the book is devoted to therapeutic approaches to tumours, viral and prion infections. Gene therapy is a promising approach for the treatment of gliomas, one of the most devastating forms of cancer. A chapter on prion diseases and microglia addresses a question of tremendous actuality, since prion diseases in cows is at this moment the major veterinary problem in Europe and has created a considerable social alarm.

The third section deals with early embryonic development and the methods used to investigate and manipulate the embryo. Further chapters deal with aestivation, megapodes and oviparity. International experts in each field have contributed to this extensively referenced volume and it will be of great interest not only to research biologists, but also to bird and reptile breeders, whether in commercial organisations or in zoos.

Linearization of Chains and Sideward Movement Feb 09 2021 This highly original monograph treats movement operations within the Minimalist Program. Jairo Nunes argues that traces are not grammatical primitives and that their properties follow from deeper features of the system, and, in particular, that the phonetic realization of traces is determined by linearization computations coupled with economy conditions regarding deletion. He proposes a version of the copy theory of movement according to which movement must be construed as a description of the interaction of the independent operations Copy, Merge, Form Chain, and Chain Reduction. Empirical evidence to support this claim includes instances of "sideward movement" between subtrees in a derivation. According to this analysis, the linearization of chains in the phonological component constrains sideward movement so that it is possible to account for standard properties of multiple gap constructions, including parasitic gap and ATB constructions, without construction-specific operations or principles that are not independently motivated. Theoretical linguists will find Linearization of Chains and Sideward Movement of great interest both theoretically and empirically. The version of the copy theory of movement proposed by Nunes will stir debate and shape future research in the field.

Language and Language Acquisition Sep 18 2021 F. LOWENTHAL University of Mons Mons, Belgium In September 1980, researchers from many different countries and working in disciplines as varied as philosophy, psychology, neurology, mathematics, education, linguistics, sociology, and others we forget to mention, again met in Mons to discuss problems concerning Language and Language Acquisition. Conflicting opinions among researchers not only from different disciplines, but also within a same discipline, led to many a lively discussion. This book attempts to recreate the atmosphere of the conference, by reproducing the different papers, some of which were rewritten after the initial presentation and discussion-session, and by giving a summary of each discussion session to enable the reader to understand how each participant reacted. Obviously, we accept full responsibility for these summaries: we hope we have understood correctly what each participant meant. This also holds for the special session devoted to an attempt to define the concept of "language". We suggest that further meetings should study language and context simultaneously, within the framework of a "CONTEXTUAL LINGUISTICS".
