Written predominantly for a psychoanalytic audience Kohut's work is often difficult to interpret. Siegel uses examples from his own practice to show how Kohut's innovative theories can be applied to other forms of treatment.

Geometric Analysis of the Bergman Kernel and Metric Jul 18 2021 This text provides a masterful and systematic treatment of all the basic analytic and geometric aspects of Bergman's classic theory of the kernel and its invariance properties. These include calculation, invariance properties, boundary asymptotics, and asymptotic expansion of the Bergman kernel and metric. Moreover, it presents a unique compendium of results with applications to function theory, geometry, partial differential equations, and interpretations in the language of functional analysis, with emphasis on the several complex variables context. Several of these topics appear here for the first time in book form. Each chapter includes illustrative examples and a collection of exercises which will be of interest to both graduate students and experienced mathematicians. Graduate students who have taken courses in complex variables and have a basic background in real and functional analysis will find this textbook appealing. Applicable courses for either main or supplementary usage include those in complex variables, several complex variables, complex differential geometry, and partial differential equations. Researchers in complex analysis, harmonic analysis, PDEs, and complex differential geometry will also benefit from the thorough treatment of the many exciting aspects of Bergman's theory.

**Key Concepts in Social Gerontology** Jun 16 2021 "Far from a dictionary, the concepts are portrayed as complex, and conflicting definitions and usages are both noted and evaluated... Each article includes a (necessarily selective) set of references, and cross-references to other concepts included in the book... Moreover, the coverage and evaluation of the concepts is right at the current leading edge in a rapidly moving field." - Victor Marshall, Department of Sociology and Institute on Aging, University of North Carolina at Chapel Hill "The concepts are very clear and very relevant, and fantastic for my group of undergraduate students... I found each concept to be succinctly and simply captured, holding enough information to satisfy initial cravings and complex enough to tempt further reading... I had originally thought that this book would provide supplementary reading as part of my 'Healthy Ageing' course, but have changed my mind to essential reading now I have had the opportunity to read the entire book." - Dr Meredith Tavener, Groningen University Social gerontology is a new and dynamic field reflecting the increasing interest in ageing across the world. This book provides a readily accessible guide to well established and contested issues, as well as new concepts emerging through cutting edge research in the discipline. The entries give concise, lucid knowledge on what constitutes the 'building blocks' of social gerontology and sets out a clear review of the core concepts, both classic and emerging, in this subject area. Each concept is explored in terms of its history, application, usefulness to theory and research, and significance in practice. They go beyond simple definitions of the concepts to look at how each issue has shaped the discipline of social gerontology today. This book is authored by social gerontologists from the UK and the USA. Together they present an interdisciplinary perspective and reflect a global approach to the presentation of key concepts in social gerontology.
