Survey of Semiconductor Physics Apr 13 2021 Any book that covers a large variety of subjects and is written by one author lacks by necessity the depth provided by an expert in his or her own field of specialization. This book is no exception. It has been written with the encouragement of my students and colleagues, who felt that an extensive card file I had accumulated over the years of teaching solid state and semiconductor physics would be helpful to more than just a few of us. This file, updated from time to time, contained lecture notes and other entries that were useful in my research and permitted me to give to my students a broader spectrum of information than is available in typical textbooks. When assembling this material into a book, I divided the top ics into material dealing with the homogeneous semiconductor, the subject of the previously published Volume 1, and the inhomogeneous semiconductor, the subject of this Volume 2. In order to keep the book to a manageable size, sections of tutorial character which can be used as text for a graduate level class had to be interwoven with others written in shorter, reference style. The pointers at the right-hand page header will assist in distinguishing the more difficult reference parts of the book (with the pointer to the right) from

the more easy-to-read basic educational sections (with the pointer tending to the left).

The Law and Policy of Air Space and Outer Space Jan 29 2020 This is a policy oriented and comparatively oriented textbook on air and space law for students and practitioners. It covers the history and development in air and space law; their interrelationships with the law of the seas and the law of Antarctica; institutions working in the field of air and space law; sovereignty in national penal air law; private international air law, especially liability law; and public and private space law Much attention is devoted to the law of air commerce: bilateral air services agreements; inter-airline co-operation; the effect of competition, antitrust and European Union law; deregulation, privatization and commercialization of air transport; ownership and control of airlines, and airline alliances; multilateralisation of air transport; and congestion and environmental controls. The last chapter of the book briefly deals with the legal aspects of commercial outer space application. Increasingly, air transport, both in fact and in law, is becoming an ordinary industry like any other and is being treated as such. Rapidly, commercial outer space activities are being privatized and commercialized.
