The Hot Shoe Diaries Nov 22 2021 When it comes to photography, it's all about the light. After spending more than thirty years behind the lens—working for National Geographic, Time, Life, and Sports Illustrated—Joe McNally knows about light. He knows how to talk about it, shape it, color it, control it, and direct it. Most importantly, he knows how to create it...using small hot shoe flashes. In The Hot Shoe Diaries, Joe brings you behind the scenes to candidly share his lighting solutions for a ton of great images. Using Nikon Speedlights, Joe lets you in on his uncensored thought process—often funny, sometimes serious, always fascinating—to demonstrate how he makes his pictures with these small flashes. Whether he's photographing a gymnast on the Great Wall, an alligator in a swamp, or a fire truck careening through Times Square, Joe uses these flashes to create great light that makes his pictures sing.

*Made by Taiwan* Feb 11 2021 Many nations and states have tried to build successful technological industries, but failed. Taiwan is an exception. Indeed, it is the third-largest production center for integrated circuits and personal computers. How has Taiwan made it, and how to do business successfully with Taiwan? This book aims to provide answers to those questions and to share the successful experience of Taiwan with others. If Taiwan could make it, then other nations, by learning from its experiences and patterns of development, can also make it, or even excel Taiwan. The book presents historical and analytical views covering most aspects of Taiwan's development patterns, including innovations of management and technology, production and business infrastructures, capital and human resources, education and government policies, and competitive characteristics of people and cultures.

Special considerations must be observed when working at such scenes, whether they are the result of acts of terrorism, accidents, or nat

*Karl Popper, Science and Enlightenment* Apr 27 2022 Here is an idea that just might save the world. It is that science, properly understood, provides us with the methodological key to the salvation of humanity. A version of this idea can be found in the works of Karl Popper. Famously, Popper argued that science cannot verify theories but can only refute them, and this is how science makes progress. Scientists are forced to think up something better, and it is this, according to Popper, that drives science forward. But Nicholas Maxwell finds a flaw in this line of argument. Physicists only ever accept theories that are unified – theories that depict the same laws applying to the

range of phenomena to which the theory applies – even though many other empirically more successful disunified theories are always available. This means that science makes a questionable assumption about the universe, namely that all disunified theories are false. Without some such presupposition as this, the whole empirical method of science breaks down. By proposing a new conception of scientific methodology, which can be applied to all worthwhile human endeavours with problematic aims, Maxwell argues for a revolution in academic inquiry to help humanity make progress towards a better, more civilized and enlightened world.

**Beyond the Boundaries of Science** May 29 2022 Is the origin of life a lucky roll of cosmic dice? Who is behind the origin of the universe? What do the latest scientific discoveries say about the origin of space and time? *Beyond the Boundaries of Science* explores the cosmic puzzles that accompany our greatest scientific advances. It suggests that there is more, beyond the reach of science--a super-intelligent Designer behind these mysteries. It takes both science and the Bible seriously, comparing the latest scientific theories with the account in Genesis, interpreted as a revelation of the sequence of our origins.

*The Parmenidean Ascent* May 17 2021 For the Parmenidean monist, there are no distinctions whatsoever--indeed, distinctions are unintelligible. In *The Parmenidean Ascent*, Michael Della Rocca aims to revive this controversial approach on rationalist grounds. He not only defends the attribution of such an extreme monism to the pre-Socratic philosopher Parmenides, but also embraces this extreme monism in its own right and expands these monistic results to many of the most crucial areas of philosophy, including being, action, knowledge, meaning, truth, and metaphysical explanation. On Della Rocca's account, there is no differentiated being, no differentiated action, knowledge, or meaning; rather all is being, just as all is action, all is knowledge, all is meaning. Motivating this argument is a detailed survey of the failure of leading positions (both historical and contemporary) to meet a demand for the explanation of a given phenomenon, together with a powerful, original version of a Bradleyan argument against the reality of relations. The result is a rationalist rejection of all distinctions and a skeptical denial of the intelligibility of ordinary, relational notions of being, action, knowledge, and meaning. Della Rocca then turns this analysis on the practice of philosophy itself. Followed to its conclusion, Parmenidean monism rejects any distinction between philosophy and the study of its history. Such a conclusion challenges methods popular in the practice of philosophy today, including especially the method of relying on intuitions and common sense as the basis of philosophical inquiry. The historically-minded and rationalist approach used throughout the book aims to demonstrate the ultimate bankruptcy of the prevailing methodology. It promises--on rationalist grounds--to inspire much soul-searching on the part of philosophers and to challenge the content and the methods of so much philosophy both now and in the past.

Theory and Reality Jun 17 2021 How does science work? Does it tell us what the world is “really” like? What makes it different from other ways of understanding the universe? In *Theory and Reality*, Peter Godfrey-Smith addresses these questions by taking the reader on a grand tour of more than a hundred years of debate about science. The result is a completely accessible introduction to the main themes of the philosophy of science. Examples and asides engage the beginning student, a glossary of terms explains key concepts, and suggestions for further reading are included at the end of each chapter. Like no other text in this field, *Theory and Reality* combines a survey of recent history of the philosophy of science with current key debates that any beginning scholar or critical reader can follow. The second edition is thoroughly updated and expanded by the author with a new chapter on truth, simplicity, and models in science.

Ockham's Razors Nov 03 2022 This book uses philosophy, science and probability to analyse why simpler theories are better than theories that are more complex.

Religious Implications of Atheism Dec 24 2021 This book is devoted to finding answers to the main existential questions of every human's life: who am I ontologically, do I have a higher purpose? These are the very “eternal questions” that make a human being human, the ability to ask them distinguishes a human from all other creatures in the universe. From time immemorial, people have argued about the criteria of truth, about the meaning of human life, and about the nature of things. Usually this was expressed in disputes between religions. About two hundred years ago, atheism arose in Christian Europe and began to take part in these controversies. For two hundred years, there have already been thousands of disputes on the topic “Religion and Atheism”, in which, as a rule, representatives of Christianity or Islam speak about religion. However, to analyze them abstractly, in general, would not be entirely correct. Therefore, here we will comment on one specific dispute, by the example of which we will try to reveal the essence of all similar disputes. This is a debate between a representative of Atheism and a representative of Islam. In addition, we will comment on the basis of the Christian worldview. Thus, a triologue will be presented here—three points of view, and the discussed problems will be shown as if “three-dimensionally”. This book formulates the Particular Principle of Causality (the Phenomenon of Creativity), which serves as a solid foundation for any kind of evidence of the existence of God. It's almost impossible to dispute. This principle is formulated for the first time in the book. The book also explores aspects of theodicy that have been a stumbling block for theologians throughout the centuries. In addition, many other important theological topics here are illuminated from unusual perspectives. Quite often, atheists oppose their concept to religions. However, a detailed analysis of the metaphysics of the atheistic worldview shows that atheism has all the properties and features of religion. This book intelligently explains that Atheism is a religion of unbelief. The book is written in simple language and can be useful to many people who hesitate on the verge of faith and unbelief.

**Evidence, Respect and Truth Sep 20 2021** Can we rely solely on statistics when we judge what is true and just? This book takes a holistic approach to addressing this question. It considers the legal trial as its paradigmatic case study before analysing a wide range of different cases, including profiling, the use of algorithms to predict students' grades, and the authorisation of automated cars. The book suggests that when we make judgements about the truth or about justice, approximations are not good enough. Truth and justice are uncompromising. They must be so, because the value that underlies them both is respect; and respect takes no compromise. Thus, in the search for truth as in the search for justice, a body of evidence that imposes a statistical compromise will not do. Only evidence that in principle allows reaching the truth and doing justice is good evidence. Once such evidence has been traced, the burden is on us to make good use of the evidence and reach truth and justice. We might or might not succeed, but once we have done our best on evidence that allows success, our judgements are justified; and as such, they can resolve conflicts over the truth and over justice.

**Occam's Razor Aug 27 2019** The Sisterhood of WaunetaNeb lives by The Exhortation: "The only good intact male is a dead intact male." OUTREACH II, manned by the seventh generation born in space, is on her way home; a home the crew has never seen. Where Ardyth dreams of a love she's only ever read about, but prosecutes fornicators. Where Gwyn tries to solve the Sisterhood's reproductive problems using only radiation-damaged frozen semen. Where Lissa risks everything to have an illegal baby. The "first contact" shuttle crashed. Its lone survivor, Dr. Pelly Hawke, could be the simplest solution to all of WaunetaNeb's problems, if he lives that long.

**Doing Bayesian Data Analysis Oct 29 2019** Doing Bayesian Data Analysis: A Tutorial with R, JAGS, and Stan, Second Edition provides an accessible approach for conducting Bayesian data analysis, as material is explained clearly with concrete examples. Included are step-by-step instructions on how to carry out Bayesian data analyses in the popular and free software R and WinBugs, as well as new programs in JAGS and Stan. The new programs are designed to be much easier to use than the scripts in the first edition. In particular, there are now compact high-level scripts that make it easy to run the programs on your own data sets. The book is divided into three parts and begins with the basics: models, probability, Bayes' rule, and the R programming language. The discussion then moves to the fundamentals applied to inferring a binomial probability, before concluding with chapters on the generalized linear model. Topics include metric-predicted variable on one or two groups; metric-predicted variable with one metric predictor; metric-predicted variable with multiple metric predictors; metric-predicted variable with one nominal predictor; and metric-predicted variable with multiple nominal predictors. The exercises found in the text have explicit purposes and guidelines for accomplishment. This book is intended for first-year graduate students or advanced undergraduates in statistics, data analysis, psychology, cognitive science, social sciences, clinical sciences, and consumer sciences in business. Accessible, including the basics of essential concepts of probability and random sampling Examples with R programming language and JAGS software Comprehensive coverage of all scenarios addressed by non-Bayesian textbooks: t-tests, analysis of variance (ANOVA) and comparisons in ANOVA, multiple regression, and chi-square (contingency table analysis) Coverage of experiment planning R and JAGS computer programming code on website Exercises have explicit purposes and guidelines for accomplishment Provides step-by-step instructions on how to conduct Bayesian data analyses in the popular and free software R and WinBugs

An unlikely participant in the events that begin to unfold, Anderson and his team, pursued by those who don't want this new information out, realize they have stumbled upon the greatest and most terrifying cover-up in the history of the human race. Occam's Razor is a chilling speculative fiction thriller which ties together several well-known, and some not so famous controversial theories concerning alien visitation, human evolution, ancient legends, and the cosmos. The novel explains how it could be very plausible to imagine that the powers that be may already know about an impending disaster and caught between all this are the novel's unfortunate characters as they struggle to figure out what to do in the face of unstoppable catastrophe.

**Fault Analysis in Cryptography Mar 15 2021** In the 1970s researchers noticed that radioactive particles produced by elements naturally present in packaging material could cause bits to flip in sensitive areas of electronic chips. Research into the effect of cosmic rays on semiconductors, an area of particular interest in the aerospace industry, led to methods of hardening electronic devices designed for harsh environments. Ultimately various mechanisms for fault creation and propagation were discovered, and in particular it was noted that many cryptographic algorithms succumb to so-called fault attacks. Preventing fault attacks without sacrificing performance is nontrivial and this is the subject of this book. Part I deals with side-channel analysis and its relevance to fault attacks. The chapters in Part II cover fault analysis in secret key cryptography, with chapters on block ciphers, fault analysis of DES and AES, countermeasures for symmetric-key ciphers, and countermeasures against attacks on AES. Part III deals with fault analysis in public key cryptography, with chapters dedicated to classical RSA and RSA-CRT implementations, elliptic curve cryptosystems and countermeasures using fault detection, devices resilient to fault injection attacks, lattice-based fault attacks on signatures, and fault attacks on pairing-based cryptography. Part IV examines fault attacks on stream ciphers and how faults interact with countermeasures used to prevent power analysis attacks. Finally, Part V contains chapters that explain how fault attacks are implemented, with chapters on fault injection technologies for microprocessors, and fault injection and key retrieval experiments on a widely used evaluation board. This is the first book on this topic and will be of interest to researchers and practitioners engaged with cryptographic engineering.
