**How to Train Language Teacher Trainers** Dec 27 2019 In recent decades, considerable European investment has been devoted to the training of language assistants, full-time teaching staff and mentors, while the new figure of the professional “language teacher trainer” (LTT) has emerged. It is becoming increasingly important that future LTTs are not simply more expert teachers, or scholars

competent in the various relevant disciplines, but professionals who are aware of their role, who know the development of teacher training in Europe and beyond, and who are able to compare various experiences in different training contexts. This volume is aimed at LTTs who wish to become aware of the main issues, tools and research now available for their daily practice and professional role, and for lecturers who teach prospective language teachers. Language teachers with long experience might also find

useful information on how they can develop into LTTs. The book also offers an overview of recent European projects that could be relevant to principals of language departments who are involved in the assessment and performance management of their staff. Finally, the volume contains research suggestions for academic and PhD students who are investigating current issues in language teaching methodology, teacher training, lifelong learning and professional development. Companies by K.K. Jain provides an up-to-date overview of the gene therapy industry. It contains a wealth of very practical information on 105 companies. For each company, information is available on the people to contact, their contact details, a corporate history, the company's technologies and products, financial data, patents held, products in clinical trials, collaborations with other companies and selected publications from the company's scientists. Almost 200 companies were initially considered for inclusion but just over 100 companies were finally selected as they fulfilled the necessary criteria to be

classified as a 'Gene Therapy Company,' defined broadly to include cell therapy companies. Not all of the companies devote their activity exclusively to gene therapy but they have sufficient relevance to be included. As part of this project, new companies were discovered that have not been reported in other publications or on the internet. Dr. Jain has spared no effort to ensure that the information is up-to-date and accurate at the time of publishing. In most instances, the information was reviewed by the companies to correct any outdated information or to add any complementary or recent information. In addition to the detailed descriptions of

each company, the data is also presented in summary tabular form so that at a glance the reader can identify collaborations within the gene therapy industry, or determine which companies are pursuing strategies involving viral, non-viral or other approaches to gene therapy, and which diseases are being targetted. Given that much of the gene therapy research and development is currently being carried out within the industrial sector, it is important for scientists, managers and investors to have the relevant information at their fingertips. This special report provides that information in one accurate, easy to consult and

up-to-date source.
