The Scientific Papers of James Clerk Maxwell, Vol. I Nov 05 2022 One of the greatest theoretical physicists of the 19th century, James Clerk Maxwell is best known for his studies of the electromagnetic field. The 101 scientific papers of this two-volume set, arranged chronologically, testify to Maxwell's profound scientific legacy and include the preliminary explorations that culminated in his most famous work, A Treatise on Electricity and Magnetism. One of the nineteenth century's most significant papers, "A Dynamical Theory of the Electromagnetic Field," appears here, along with similarly influential expositions of Maxwell's dynamical theory of gases. The author's extensive range of interests is well represented, from his discussions of color blindness and the composition of Saturn's rings to his essays on geometrical optics, ether, and protecting buildings from lightning. His less technical writings are featured as well, including items written for the Encyclopedia Britannica and Nature magazine, book reviews, and popular lectures. Striking in their originality, these papers offer a wealth of stimulating and inspiring reading to modern students of mathematics and physics.

2022 This work is the first volume of a comprehensive edition of the scientific letters and

manuscript papers of James Clerk Maxwell, covering the period from 1846 to 1862. It is edited and annotated with a full historical commentary by P.M. Harman. This is an important book for physicists, mathematicians and historians of science. A fundamental source of reference for the study of Maxwell and his work, it will be especially relevant to university and physics departmental libraries.
