Deep Learning Dec 30 2019 An  
introduction to a broad range  
of topics in deep learning,  
covering mathematical and  
conceptual background, deep  
learning techniques used in  
industry, and research  
perspectives. "Written by three  
experts in the field, Deep  
Learning is the only  
comprehensive book on the  
subject." —Elon Musk, cochair  
of OpenAI; cofounder and CEO  
of Tesla and SpaceX Deep  
learning is a form of machine  
learning that enables  
computers to learn from  
experience and understand the  
world in terms of a hierarchy of  
concepts. Because the  
computer gathers knowledge  
from experience, there is no  
need for a human computer  
operator to formally specify all  
the knowledge that the

computer needs. The hierarchy  
of concepts allows the  
computer to learn complicated  
concepts by building them out  
of simpler ones; a graph of  
these hierarchies would be  
many layers deep. This book  
introduces a broad range of  
topics in deep learning. The  
text offers mathematical and  
conceptual background,  
covering relevant concepts in  
linear algebra, probability  
theory and information theory,  
numerical computation, and  
machine learning. It describes  
deep learning techniques used  
by practitioners in industry,  
including deep feedforward  
networks, regularization,  
optimization algorithms,  
convolutional networks,  
sequence modeling, and  
practical methodology; and it  
surveys such applications as  
natural language processing,  
speech recognition, computer  
vision, online recommendation  
systems, bioinformatics, and  
videogames. Finally, the book  
offers research perspectives,  
covering such theoretical  
topics as linear factor models,  
autoencoders, representation  
learning, structured  
probabilistic models, Monte  
Carlo methods, the partition  
function, approximate  
inference, and deep generative  
models. Deep Learning can be  
used by undergraduate or  
graduate students planning  
careers in either industry or  
research, and by software  
engineers who want to begin  
using deep learning in their  
products or platforms. A  
website offers supplementary  
material for both readers and  
instructors.
