**George Tooley's Beginner's Book on How to Handle Firearms Safely** Mar 04 2020 Written by a veteran firearms instructor, this book addresses the profound need for basic instruction in safe firearms use by the beginner—the new firearms owner, as well as the police cadet or correctional officer trainee in the academy—in dire need of instruction in how to safely handle and care for their new weapons; and not only to use them safely, but effectively, accurately and with good judgment and skill. With 45 years of experience, much of it in training others to use firearms, no one was better equipped for writing this book than the late George L. Tooley. His down-to-earth insistence on addressing the basics, his continual attention to safety, and his detailed explanations of the inner workings of firearms make this book unique in its field.

**A Beginner's Book of TEX** Jul 08 2020 The last two decades have witnessed a revolution in the realm of typography, with the virtual disappearance of hot-lead typesetting in favor of the so-called digital typesetting. The principle behind the new technology is simple: imagine a very fine mesh superimposed on a sheet of paper. Digital typesetting consists in darkening the appropriate pixels (tiny squares) of this mesh, in patterns corresponding to each character and symbol of the text being set. The actual darkening is done by some printing device, say a laser printer or phototypesetter, which must be told exactly where the ink should go. Since the mesh is very fine—the dashes surrounding this sentence are some six pixels thick, and more than 200 pixels long—the printer can only be controlled by a computer program, which takes a "high-level" description of the page in terms of text, fonts, and formatting commands, and digests all of that into "low-level" commands for the printer. TEX is such a program, created by Donald E. Knuth, a computer scientist at Stanford University.
