**Ensuring Competent Performance in Forensic Practice** May 11 2021 The Need for Professional Competence For all the attention given to the forensic sciences in the media and the law, there is a glaring deficiency in the promotion of standards of competence. In the midst of fascinating scientific advances in the field, forensic science still suffers embarrassments from highly publicized scientific controversies and shoddy or fraudulent practices. The enactment of the Daubert ruling, which questions the qualification of a scientific “expert”, demonstrates the courts’ attempt to regulate a profession that ought to be self-regulating. Libraries of books on

technique can do nothing to promote forensic science without common governing standards of practice that ensures professional competence. **Common Ground** The first book of its kind, **Ensuring Competent Performance in Forensic Practice: Recovery, Analysis, Interpretation, and Reporting** promotes a common understanding of competence and demonstrates the application of standards and practice in all aspects of forensic science. Authors Fereday and Hadley, esteemed forensic scientists with forty and fifty years experience respectively, address the method and benefit of establishing occupational standards for collection of evidence, interpretation of scientific analysis, and appropriate methods of testimony. **Training and Assessment** The authors stress the standardization of proper training and testing procedures to ensure that every scientist employed in public and private practice has the credentials they require. They give clear guidelines for effective training programs based on occupational standards that support the development of competent practitioners. The book examines the importance of workplace assessments of competence against occupational standards and emphasizes the role and quality of those involved in the assessment process. The authors include several case studies demonstrating competence in practice and the methods to ensure consistent high standards in the future.

**Find Your Focus Zone** Nov 05 2020 Being able to perform any task with full attention has become one of the great unspoken-about challenges of modern life. As our culture has become more high-speed, techno-stressed, information-cluttered and media-saturated, we are getting pushed out of our focus zones without even realising it. If you work in a modern office, it is likely you are suffering from 'information fatigue syndrome', which means that even naturally bright and creative people are rendered incapable of making swift decisions, problem-solving efficiently or able to maintain appropriate energy levels. Award-winning psychologist Lucy Jo Palladino offers practical solutions for anyone juggling too much, who finds themselves in a state of 'continuous partial attention', seemingly unable to do any one task with full concentration. In order to help people combat the negative aspects of 'always-on' information culture, Palladino has come up with a new set of skills that will help readers beat distraction and win the fight against information overload. She provides eight sets of 'keys' that will unlock your best attention and help you balance adrenaline levels, even when you are under pressure or facing dull tasks. Rooted in sports performance psychology, yet practical and user-friendly, Palladino's cutting-edge methods will help you stay focused and enhance your performance in all areas of daily life where concentration is required.

**The Making of an Expert Engineer** Oct 24 2019 This book sets out the principles of engineering practice, knowledge that has come to light through more than a decade of research by the author and his students studying engineers at work. Until now, this knowledge has been

almost entirely unwritten, passed on invisibly from one generation of engineers to the next, what engineers refer to as “experience”. This is a book for all engineers. It distils the knowledge of many experts in one volume. The book will help engineers enjoy a more satisfying and rewarding career and provide more valuable results for their employers and clients. The book focuses on issues often seen as “non-technical” in the world of engineering, yet it shows how these issues are thoroughly technical. Engineering firms traditionally have sought expert advice on these aspects from management schools, often regarding these aspects of engineering practice as something to do with psychology or organisational behaviour. The results are normally disappointing because management schools and psychologists have limited insight and understanding of the technical dimensions in engineering work. Little if any of the material in this book can be obtained from management texts or courses. Management schools have avoided the technical dimension of workplace practices and that is precisely what characterises engineering practice. The technical dimension infuses almost every aspect of an engineer’s working day and cannot be avoided. That’s why this book is so necessary: there has not yet been any authoritative source or guidance to bridge the gap between inanimate technical issues and organisational behaviour. This book fills this gap in our knowledge, is based on rigorous research, and yet is written in a style which is accessible for a wide audience.

**Technological Change and Skill Development in Sudan** Apr 22 2022 With the ongoing restructuring in Sudan, structural issues such as the need for skill development and interaction with technological change need an in-depth analysis that this book offers. The central themes of this book are- required skill formation, upskilling of the workers, and their interaction with

technological change in lieu of a deficient educational system and its implications. An empirical investigation of the causes and consequences of low skill and technology indicators using a primary survey at macro and micro levels is undertaken. This is followed by an examination of the interaction between the low skill and technology indicators, the relationships between skill, upskilling and technology indicators, skills mismatch, the uses and impacts of ICT and differences at firm as well as industry level as well as knowledge transfer effects. A set of recommendations towards the need for implementation of consistent policies, increasing incentives and collaboration between public and private institutions completes the book. ?

### **Science/Technology/Society as Reform in Science Education** Aug 02 2020

Science/Technology/Society (S/T/S) is a reform effort to broaden science as a discipline in schools and colleges; to relate science to other facets of the curriculum; and to relate science specifically to technology and to the society that supports and produces new conceptualizations of both. S/T/S is also defined as the teaching and learning of science/technology in the context of human experience. It focuses on a method of teaching that recognizes the importance that experience in the real world has on the learning process. And it recognizes that real learning can occur only when the learner is engaged and able to construct her or his own meaning.

Science/Technology/Society As Reform in Science Education is rich with examples of such teaching and learning. It includes impressive research evidence that illustrates that progress has been made and goals have been met. For teachers and administrators alike, this book provides and validates new visions for science education.

Expert Advice for Policy Choice Jan 19 2022 Economic reasoning has thus far dominated the field of public policy analysis. This new introduction to the field posits that policy analysis should have both a broader interdisciplinary base—including criteria from such fields as political science, sociology, law, and philosophy, as well as economics—and also a broader audience in order to foster democratic debate. To achieve these goals, MacRae and Whittington have organized their textbook around the construction of decision matrices using multiple criteria, exploring the uses of the decision matrix formulation more fully than other texts. They describe how to set up the matrix, fill in cells and combine criteria, and use it as an aid for decision making. They show how ethical assessment of the affects that alternatives have on various parties differs from political analysis, and then they extend the use of the decision matrix to consider alternatives by affected parties, periods of time, or combined factors. The authors also thoughtfully address the role of expert advice in the policy process, widening the scope of the field to describe a complex system for the creation and use of knowledge in a democracy. An extended case study of HIV/AIDS policy follows each chapter (in installments), immediately illustrating the application of the material. The book also contains a glossary. Expert Advice for Policy Choice provides a new basis for graduate education in public policy analysis and can also serve as a text in planning, evaluation research, or public administration. In addition, it will be of

interest to students and professionals wishing to aid policy choice who work in such fields as sociology, political science, psychology, public health, and social work.

*A Web-Based Approach to Measure Skill Mismatches and Skills Profiles for a Developing Country: Sep 27 2022* "Several interdisciplinary studies highlight imperfect information as a possible explanation of skill mismatches, which in turn has implications for unemployment and informality rates. Despite information failures and their consequences, countries like Colombia (where informality and unemployment rates are high) lack a proper labour market information system to identify skill mismatches and employer skill requirements. One reason for this absence is the cost of collecting labour market data. Recently, the potential use of online job portals as a source of labour market information has gained the attention of researchers and policymakers, since these portals can provide quick and relatively low-cost data collection. As such, these portals could be of use for Colombia. However, debates continue about the efficacy of this use, particularly concerning the robustness of the collected data. This book implements a novel mixed-methods approach (such as web scraping, text mining, machine learning, etc.) to investigate to what extent a web-based model of skill mismatches can be developed for Colombia. The main contribution of this book is demonstrating that, with the proper techniques, job portals can be a robust source of labour market information. In doing so, it also contributes to current knowledge by developing a conceptual and methodological approach to identify skills, occupations, and skill mismatches using online job advertisements, which would otherwise be too complex to be collected and analysed via other means. By applying this novel methodology, this study provides new empirical data on the extent and nature of skill mismatches in Colombia

for a considerable set of non-agricultural occupations in the urban and formal economy. Moreover, this information can be used as a complement to household surveys to monitor potential skill shortages. Thus, the findings are useful for policymakers, statisticians, and education and training providers, among others."

**EBOOK: Professionalism Social Work Skills in Practice** Oct 04 2020 Dr Godfred Boahen is a Policy and Research Officer at the British Association of Social Workers (BASW), UK. Dr Fran Wiles is a qualified social worker registered with the Health and Care Professions Council and Senior Lecturer in Social Work at the Open University, UK. What does it mean to be 'professional' in social work? Which professional skills and values should you develop as a social worker or student of the field? Can developing self-management help social workers to refine their professional skills? This accessible yet rigorous text, written by authors with extensive social work experience, advances the theory that there is one guiding thread behind the skills and capabilities associated with professionalism: self-management. This novel insight gains its relevance from the fact that social workers are increasingly expected to demonstrate high standards of professionalism when working with service users and colleagues but often lack

the support to achieve this end. The authors also show that professionalism entails the deployment of appropriate skills to motivate and empower service users to change problematic behaviours. Whether the reader is a student of social work, working with children and families or with adults, or looking to draw on self-management skills in planning their continuing professional development (CPD), this concise effort offers the reader a rich exploration of professional practice. Divided into theory and practice, the book includes:

- Sociological theories on professionalization and the role of values in practice.
- Advice for developing self-management, emotional intelligence and self-efficacy through an exploration of evidence-based literature, research notes and case studies.
- Guidance on professional social work communication skills, with particular attention to power relations in selecting appropriate communication methods in different contexts and with diverse people.
- Safeguarding in the light of professionalism and critical analysis.
- Leadership skills, and professional development to achieve leadership within a wider team or agency.

\*\*\* This book forms part of the Social Work Skills in Practice series. The series focuses on key social work skills required for working with children and adult service users, families and carers. The books offer both theoretical and evidence-informed knowledge, alongside the application of skills relevant to day-to-day social work practice. They are an invaluable resource for pre-qualifying students, newly-qualified social workers, academics teaching and researching in the field, as well as social work practitioners, including practice educators, pursuing continuing professional development.

The Declining Need for Human Resource Professionals in Our Jobless Recovery Sep 22 2019  
While government vote buyers continue to rant and rave, scream and yell about all kinds of

current politically correct or politically incorrect discrimination in the business and corporate world, these very same politicians totally ignore the real government created discrimination practiced every day, that of the inferior education provided by most public school systems throughout every city and state in America. The business of business is business. It is also often stated that any action undertaken or performed by a corporation that does not make the maximum amount of profit for that corporation, is a crime committed against the business owners/stockholders. We have now had five years of a micro-managing, over-controlling federal government whose only stated goal is: To put every American business out of business, and every American worker out of work. Good Job Guys!

*The Teaching of Science in Primary Schools* Jun 24 2022 *The Teaching of Science in Primary Schools* provides essential information for all concerned with primary school education about all aspects of teaching science. It pays particular attention to inquiry-based teaching and learning because of the more general educational benefits that follow from using this approach. These benefits are often expressed in terms of developing general scientific literacy and fostering the ability to learn and the motivation to continue learning. This book also aims to help teachers focus on the 'big' or powerful ideas of science rather than teaching a series of unrelated facts. This leads children to an understanding of the nature, and limitations, of scientific activity. This fully expanded and updated edition explores: The compelling reasons for starting science in the primary school. Within-school planning in the context of less prescriptive national requirements.

The value of having in mind the ‘big ideas’ of science. The opportunities for children to learn through greater access to the internet and social networking. The expanding sources of materials and guidance now available to teachers on-line. Greater attention to school and teacher self-evaluation as a means of improving provision for children’s learning. The importance for both teachers and learners of reflecting on the process and content of their activities. Other key aspects of teaching, such as:- questioning, the importance of discussion and dialogue, the formative and summative roles of assessment and strategies for helping children to develop understanding, skills, positive attitudes and enjoyment of science, are preserved. So also is the learner-centred approach with an emphasis on children learning to take some responsibility for their activities. This book is essential reading for all primary school teachers and those on primary education courses.
