Tupelov Tu-22 'Blinder' Tu-22M 'Backfire' Sep 23 2019 Prior to the development of the Tu-22, NATO planners had long feared the idea of the Soviets developing a long-range supersonic nuclear bomber. The Tu-22 'Blinder' never really gave the USSR what they were looking for but Tu-22M 'Backfire' did! This information-packed volume reveals Soviet tactics for destroying NATO warships using 'Blinders', and its use by Libya and Iraq.

[Perfecting the American Steam Locomotive](#) Dec 07 2020 Perfecting the American Steam Locomotive documents the role played by mechanical engineers in the development of locomotive design. The steam engine and the mechanical engineering profession both grew directly out of the Industrial Revolution's need for sources of power beyond that of men and animals. Invented in England when coal mining was being developed, the practical steam engine eventually found numerous applications in transportation, especially in railroad technology. J. Parker Lamb traces the evolution of the steam engine from the early 1700s through the early 1800s, when the first locomotives were sent to the United States from England. Lamb then shifts the scene to the development of the American steam locomotive, first by numerous small builders, and later, by the early 20th century, by only three major enterprises and a handful of railroad company shops. Lamb reviews the steady progress of steam locomotive technology through its pinnacle during the 1930s, then discusses the reasons for its subsequent decline.

Tupolev TU-22 Oct 25 2019 This historic Russian aircraft was first delivered to the Soviet Air Force at the height of the Cold War in 1961. It remained in service until replaced by the much modified Tu-22M Backfire which was introduced in the early 1970s and still remains in service. It was the first Soviet supersonic bomber and was used for reconnaissance and bombing, in the latter role carrying either conventional or nuclear bombs. The early aircraft had a range of 1,800 miles but later models had a much increased radius of action through the introduction of in-flight refuelling. This book looks at the design and development of the aircraft up to the introduction of the type M Backfire. Details of construction, weapon systems, photo-reconnaissance and jamming equipment are included to cover the several variant models. Operational use is explained and the text includes many first-hand accounts from Russian aircrew of the period. The book will be superbly illustrated by unique official photographs and manuals.
