Everyday Problem-Based Learning Dec 14 2020 Educators know that problem-based learning answers that perennial student question: “When will I ever use this in real life?” Faced with a meaty problem to solve, students finally “get” why they need to learn the content and are energized to do so. But here’s the exciting part: problem-based learning doesn’t require weeks of study or an end-of-year project. In this book, Brian Pete and Robin Fogarty show how you can use problem-based learning as a daily approach to helping students learn authentic and relevant content and skills. They

explain how to engage students in each of the seven steps in the problem-based learning model, so students learn how to develop good questions, launch their inquiry, gather information, organize their information, create evidence, present their findings, and assess their learning. Using practical examples, they also describe how to help students master these seven important thinking skills: develop, analyze, reason, understand, solve, apply, and evaluate. To put all this in context, the authors offer seven “PBL in a Nutshell” lessons that can easily be incorporated in a single classroom period. Depth of thinking and ease of implementation--this is problem-based learning at its best.

How Many More Questions? May 31 2022 *How Many More Questions?: Techniques for Clinical Interviews of Young Medically Ill Children* provides readers with a comprehensive framework to understand how 5-10 year old children use language to formulate and communicate their thoughts. The book then guides the reader in how to effectively elicit information about sensitive and stressful topics from young children, such as their emotions, difficulties, problems, worries, and illness. Seventeen exquisitely written chapters that include twelve developmental guidelines, techniques, case examples, and illustrative dialogues provide the reader with the tools needed to address specific communication challenges involved in speaking with young children who have pain, medical trauma, terminal illness, or specific disorders like epilepsy. *How Many More Questions?* is useful for pediatric professionals who strive to acquire exceptional clinical interviewing skills and who no longer wish to hear children say, "When are we done?" The wide range of medical and non-medical professionals who work with young ill children, such as pediatricians, neurologists, psychiatrists, psychologists, neuropsychologists, social workers, nurses, child life specialists, as well as interested parents will use this book as a reference guide.

The Deposition Tutorial: Questions, Answers, Tactics, Demonstrations Jul 01 2022 We live in an era when most litigation parties never see the inside of a courtroom. Cases are resolved by motion practice, by informal settlement, or by formal procedures such as arbitration and mediation. Rarely does an attorney get to say, "Ladies and gentlemen of the jury . . ." Does this change render deposition practice obsolete? Quite the opposite—depositions are more important than ever. Instead of a battle between attorneys who are trying to hide their evidence for trial, depositions are the place to put your best case forward, establish your case theories, explore the strengths and weaknesses of your case, and prepare your disposition strategy, be it a motion for summary judgment, a settlement offer, or mediation. Taking effective depositions in this changed environment involves a new paradigm, a whole new way of thinking about the discovery process. This book will guide you through that process, from interviewing and preparing your client through theory building and expert testimony. It also deals with concrete issues like creating a clean, understandable deposition record that will benefit your case throughout the litigation process. With its Q&A format and its many examples, The Deposition Tutorial will become the book you want on your desk for quick reference.

The William Lowell Putnam Mathematical Competition 1985–2000: Problems, Solutions, and Commentary Nov 05 2022 This third volume of problems from the William Lowell Putnam Competition is unlike the previous two in that it places the problems in the context of important mathematical themes. The authors highlight connections to other problems, to the curriculum and to more advanced topics. The best problems contain kernels of sophisticated ideas related to important current research, and yet the problems are accessible to undergraduates. The solutions have been compiled from the American Mathematical Monthly, Mathematics Magazine and past competitors. Multiple solutions enhance the understanding of the audience, explaining techniques that have relevance to more than the problem at hand. In addition, the book contains suggestions for further reading, a hint to each problem, separate from the full solution and background information about the competition. The book will appeal to students, teachers, professors and indeed anyone interested in problem solving as a gateway to a deep understanding of mathematics.

Essentials of Abnormal Psychology Mar 17 2021 Fully integrating the DSM-5, Durand, Barlow, and Hofmann describe abnormal psychology through their standard-setting integrative approach -- the most modern, scientifically valid method for studying the subject. Through this approach, students learn that psychological disorders are rarely caused by a single influence, but rooted in the interaction among multiple factors: biological, psychological, cultural, social, familial, and even political. A conversational writing style, consistent pedagogy, and real case profiles provide a realistic context for the scientific findings. This eighth edition highlights groundbreaking updates to research findings and the latest innovations in the treatment of mental disorders. Developing Students' Statistical Reasoning Oct 24 2021 Increased attention is being paid to the need for statistically educated citizens: statistics is now included in the K-12 mathematics curriculum, increasing numbers of students are taking courses in high school, and introductory statistics courses are required in college. However, increasing the amount of instruction is not sufficient to prepare statistically literate citizens. A major change is needed in how statistics is taught. To bring about this change, three dimensions of teacher knowledge need to be addressed: their knowledge of statistical content, their pedagogical knowledge, and their statistical-pedagogical knowledge, i.e., their specific knowledge about how to teach statistics. This book is written for mathematics and statistics educators and researchers. It summarizes the research and highlights the important concepts for teachers to emphasize, and shows the interrelationships among concepts. It makes specific suggestions regarding how to build classroom activities, integrate technological tools, and assess students' learning. This is a unique book. While providing a wealth of examples through lessons and data sets, it is also the best attempt by members of our profession to integrate suggestions from research findings with statistics concepts and pedagogy. The book's

message about the importance of listening to research is loud and clear, as is its message about alternative ways of teaching statistics. This book will impact instructors, giving them pause to consider: "Is what I'm doing now really the best thing for my students? What could I do better?" J. Michael Shaughnessy, Professor, Dept of Mathematical Sciences, Portland State University, USA This is a much-needed text for linking research and practice in teaching statistics. The authors have provided a comprehensive overview of the current state-of-the-art in statistics education research. The insights they have gleaned from the literature should be tremendously helpful for those involved in teaching and researching introductory courses. Randall E. Groth, Assistant Professor of Mathematics Education, Salisbury University, USA

Behavior Therapy with Children II Oct 12 2020 The term behavior modification refers to the systematic analysis and change of human behavior and the principal focus is on overt behavior and its relationships to environmental variables. Behavior modification can be applied in many settings, the nature of which helps to define its subsets. Thus, applied in clinical settings, toward clinical goals, it encompasses the subset behavior therapy. In Behavior Therapy with Children, Volume 2, Anthony M. Graziano focuses on behavior therapy--specifically, the behavioral treatment of children's clinical problems. The field of behavior modification encompasses an astonishingly wide and varied spectrum of concepts about and approaches to education, clinical problems, social programming, and rehabilitation efforts. A conceptually and technologically rich medium, it has been nourished by the psychology laboratory, the school, and the psychiatric clinic. It is an area with diffuse boundaries surrounding a highly active center, within which apparently solid landmarks have already been worn away by the dissolving action of corrective self-criticism--immeasurably aided by the catalysts stirred in by the field's many critics. The activity continues, the dynamic field boils, and the medium enriches itself. There appears to be a tendency, particularly among new behavior therapists, to limit their focus too narrowly to the client's systems of overt behavior. In this project, psychological therapy begins with a personal, interactive social situation in which the generally expected human response of interest, sympathy, and support, is the minimum condition. Graziano maintains that these clinical sensitivity skills must be preserved in behavior therapy and enhance its important contribution to advancing the therapeutic endeavor. Anthony M. Graziano is professor emeritus in the Department of Psychology, State University of New York at Buffalo. He has published a number of articles in journals on subjects such as teaching machine programs, behavior therapy with children, diagnostic testing, the history of psychology, and evaluations of the contemporary mental health professions. He has been on the editorial board of Behavior Modification and on the board of directors for the Eastern Psychological Association.
