Permanent Magnet Synchronous Machines Oct 01 2020 Interest in permanent magnet synchronous machines (PMSMs) is continuously increasing worldwide, especially with the increased use of renewable energy and the electrification of transports. This book contains the successful submissions of fifteen papers to a Special Issue of Energies on the subject area of "Permanent Magnet Synchronous Machines". The focus is on permanent magnet synchronous machines and the electrical systems they are connected to. The presented work represents a wide range of areas. Studies of control systems, both for permanent magnet synchronous machines and for brushless DC motors, are presented and experimentally verified. Design studies of generators for wind power, wave power and hydro power are presented. Finite element method simulations and analytical design methods are used. The presented studies represent several of the different research fields on permanent magnet machines and electric drives.

The Perfect Summer Aug 31 2020 The talented trio that brought you The Perfect Present is back...with summer stories that will brighten your day, warm your heart, and prove that life is one of the greatest teachers there is. In Too Big for Teacups, Gabrielle Simone introduces us to the Fernandez family, who is on their way to Disney for a vacation. Marlena, the oldest, would rather stay home and practice with her dance team. But her parents make her go, and Marlena trudges through a miserable week of what was supposed to be a family bonding experience. In the midst of her complaining, her best friend, Jennifer, helps her learn a valuable life lesson and a new outlook on family time. In Jackie Lee's A Lesson for Summer, 14-year-old twins, Vanessa and Teresa, had planned their ideal summer vacation. But when their father announces that he's taking over a new church in a new city, the girls find their summer ruined! Instead of spending their days shopping, talking about boys, and going to the movies, they were going to be moving and volunteering to mentor a bunch of snotty-nosed seven-year-olds. The twins do everything in their power to sabotage their parents' plans for them. However, in the end, they learn life lessons that truly make this the perfect summer for both of them. Morgan Billingsley is back with twins, Max and Mickey in A Country Summer. And this time, the suburban duo is unplugging from their iPads, Wi-Fi, and Netflix, to spend the summer with their extended family in a small Arkansas town. This was not at all Mickey's idea of fun. In fact, she hates the boring country and her "classless" relatives. While Max fits right in with his cousins, Mickey soon feels left out and learns a valuable lesson about life - it doesn't matter what you have...what matters is who you have. These three young writers will inspire and entertain...and leave you with a lesson or two yourself.

Pricing and Revenue Optimization Apr 26 2020 This is the first comprehensive introduction to the concepts, theories, and applications of pricing and revenue optimization. From the initial success of "yield management" in the commercial airline industry down to more recent successes of markdown management and dynamic pricing, the application of mathematical analysis to optimize pricing has become increasingly important across many different industries. But, since pricing and revenue optimization has involved the use of sophisticated mathematical techniques, the topic has remained largely inaccessible to students and the typical manager. With methods proven in the MBA courses taught by the author at Columbia and Stanford Business Schools, this book presents the basic concepts of pricing and revenue optimization in a form accessible to MBA students, MS students, and advanced undergraduates. In addition, managers will find the practical approach to the issue of pricing and revenue optimization invaluable. Solutions to the end-of-chapter exercises are available to instructors who are using this book in their courses. For access to the solutions manual, please contact marketing@www.sup.org.

Modern Cardiac Surgery Oct 21 2019 Modern Cardiac Surgery is based on, but does not consist completely of, papers submitted at the annual course of cardiac surgery run by the combined Institutes and Post-Graduate Hospitals involved in cardiac surgery in London (1977). The subjects which have been chosen and included fulfil one of

two criteria; either they are subjects which were not included in the previous book, *The Current Status of Cardiac Surgery*, or they cover subjects which needed to be updated. Because this is a teaching course and not a symposium, the emphasis has been on being informative rather than on presenting masses of results. The book has been prepared partly from manuscripts submitted by the authors and partly from annotated tapes of the proceedings of the meeting. Through out the editing and production of this book careful consideration has been given to the requirements of the readership. The book is aimed at all students of cardiac surgery and cardiology at all levels, and as much information as possible has been packed into it. Nevertheless, the editor wishes to thank the authors for the efforts they have made to be concise and clear in their presentation and for their tremendous co-operation in alterations which have been incorporated to make it a more readable treatise. This means that this is a book which is of value to nurses interested in cardiology in intensive care, to physiotherapists and students wishing to look up particular topics before their final examinations.

Jazz Musicians, 1945 to the Present May 28 2020 From its very beginnings, the nature of jazz has been to reinvent itself. As the musical genre evolved from its roots—blues, European music, Voodoo ceremonies, and brass bands that played at funerals, parades and celebrations—the sound reflected the tenor of the times, from the citified strains of the Roaring '20s to the Big Band swing of pre-World War II to the bop revolution that grew out of the minimalist sound the war forced upon the art form. That the music continued to develop and evolve is a tribute to the power and creativity of its musicians. Charlie Parker, Thelonious Monk, Sarah Vaughan, Art Blakey, Dave Brubeck, Sun Ra, John Coltrane, Miles Davis, Diana Krall, Archie Shepp, Chick Corea, Branford Marsalis, Larry Coryell, and Kenny Kirkland are just some of the jazz greats profiled here. The five major periods of jazz—the bop revolution, hard bop and cool jazz, the avant-garde, fusion, and contemporary—form the basis for the sections in this reference work, with a brief history of each period provided. The artists who were integral to the evolution of each period are then profiled. Each biographical entry focuses on the artist's life and his or her influence on jazz and on music as a whole. A complete discography for each musician is also provided.
