**Evaluating Information Retrieval and Access Tasks** Dec 24 2019 This open access book summarizes the first two decades of the NII Testbeds and Community for Information access Research (NTCIR). NTCIR is a series of evaluation forums run by a global team of researchers and hosted by the National Institute of Informatics (NII), Japan. The book is unique in that it discusses not just what was done at NTCIR, but also how it was done and the impact it has achieved. For example, in some chapters the reader sees the early seeds of what eventually grew to be the search engines that provide access to content on the World Wide Web, today's smartphones that can tailor what they show to the needs of their owners, and the smart speakers that enrich our lives at home and on the move. We also get glimpses into how new search engines can be built for mathematical formulae, or for the digital record of a lived human life. Key to the success of the NTCIR endeavor was early recognition that information access research is an empirical discipline and that evaluation therefore lay at the core of the enterprise. Evaluation is thus at the heart of each chapter in this book. They show, for example, how the recognition that some documents are more important than others has shaped thinking about evaluation design. The thirty-three contributors to this volume speak for the many hundreds of researchers from dozens of countries around the world who together shaped NTCIR as organizers and participants. This book is suitable for researchers, practitioners, and students--anyone who wants to learn about past and present evaluation efforts in information retrieval, information access, and natural language processing, as well as those who want to participate in an evaluation task or even to design and organize one.

**Hall's Manual of Skin as a Marker of Underlying Disease** Apr 20 2022 Stop, look and learn with us as we gather information through the mirror called the skin. The skin has much to tell us about where to look for illness, how grave that illness may be, and what strategies for therapy might be most advantageous. The skin is also the organ most easily accessible for obtaining tissue for pathological examination, culture, and examination of debris. These tools will also be discussed and expanded upon. This book classifies the skin conditions from the standpoint of organ involved as well as specific disease. The text makes use of many illustrations and photographs.

**Manual of Pediatric Neurology** Jul 23 2022 "Manual of Pediatric Neurology" is an easy-to-read and easy-to-access text based on clinical scenarios. The book comprises a collection of chapters that address frequently encountered conditions in all clinical settings. These include the management of seizures in the emergency department, treatment of epilepsy in the outpatient setting, acute and chronic management of headaches, tic disorder, neuromuscular illnesses, CNS infections, and many more.
