*Guidelines for Applying Cohesive Models to the Damage Behaviour of Engineering Materials and Structures* Aug 05 2020 This brief provides guidance for the application of cohesive models to determine damage and fracture in materials and structural components. This can be done for configurations with or without a pre-existing crack. Although the brief addresses structural behaviour, the methods described herein may also be applied to any deformation induced material damage and failure, e.g. those occurring during manufacturing processes. The methods described are applicable to the behaviour of ductile metallic materials and structural components made thereof. Hints are also given for applying the cohesive model to other materials.

*Guidelines for Thermography in Architecture and Civil Engineering* Jun 02 2020 What does it take to obtain significant measurement results in thermographic examinations? These guidelines convey in condensed form the authors' many years of experience in detecting thermal engineering defects and structural damage such as thermal bridges, air leaks or moisture penetration damage with a non-destructive and easily applicable method of measurement and investigation. As well as providing an introduction to the physical fundamentals of thermography, the book offers an up-to-date overview of the technology, structure, standards and selection criteria of common thermographic systems. Using selected examples, it shows the many possibilities and areas of application of infrared thermography as well as the limits of its use.
