Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles Feb 02 2020 The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current

vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. *Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles* estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards.

Lemon-Aid New Cars and Trucks 2012 Apr 29 2022 Phil Edmonston, Canada's automotive "Dr. Phil," pulls no punches. He says there's never been a better time to buy a new car or truck, thanks to a stronger Canadian dollar and an auto industry offering reduced prices, more cash rebates, low financing rates, bargain leases, and free auto maintenance programs. In this all-new guide he says: Audis are beautiful to behold but hell to own (biodegradable transmissions, "rodent snack" wiring, and mind-boggling depreciation) Many 2011-12 automobiles have "chin-to-chest head restraints, blinding dash reflections, and dash gauges that can't be seen in sunlight, not to mention painful wind-tunnel roar if the rear windows are opened while underway) Ethanol and hybrid fuel-saving claims have more in common with Harry Potter than the Society of Automotive Engineers) GM's 2012 Volt electric car is a mixture of hype and hypocrisy from the car company that "killed" its own electric car more than a decade ago) You can save \$2,000 by cutting freight fees and "administrative" charges) Diesel annual urea fill-up scams can cost you \$300, including an \$80 "handling" charge for \$25 worth of urea) Lemon-Aid's 2011-12 Endangered Species List: the Chinese Volvo, the Indian Jaguar and Land Rover, the Mercedes-Benz Smart Car, Mitsubishi, and Suzuki

The Moral Responsibility of Firms Aug 29 2019 Individuals are generally considered morally responsible for their actions. Who or what is responsible when those individuals become part of business organizations? Can we correctly ascribe moral responsibility to the organization itself? If so, what are the grounds for this claim and to what extent do the individuals also remain morally responsible? If not, does moral responsibility fall entirely to specific individuals within the organization and can they be readily identified? A perennial question in business ethics has

concerned the extent to which business organizations can be correctly said to have moral responsibilities and obligations. In philosophical terms, this is a question of "corporate moral agency." Whether firms can be said to be moral agents and have the capacity for moral responsibility has significant practical consequences. In most legal systems in the world, business firms are recognized as "persons" with the ability to own property, to maintain and defend lawsuits, and to self-organize governance structures. However to recognize that these "business persons" can also act morally or immorally as organizations would justify the imposition of other legal constraints and normative expectations on organizations. In the criminal law, for example, the idea that an organized firm may itself have criminal culpability is accepted in many countries (such as the United States) but rejected in others (such as Germany). This book presents contributions by leading business scholars in business ethics, philosophy, and related disciplines to extend our understanding of the "moral responsibility" of firms.
