Workshop on Condition Assessment Inspection Devices for Water Transmission Mains Jun 03 2020 Many water utilities have only a limited knowledge of the structural condition of their underground assets. In order to maintain optimum serviceability, it is increasingly important that utilities gain a better understanding of the current condition and performance of these buried assets. Regular inspection and condition assessment of pipelines can greatly assist utilities with developing robust and cost-effective operational maintenance programs, which will optimize capital expenditure whilst minimizing risk. The aim of the project was to conduct a state-of-the-art literature review of non-interruptive condition assessment inspection devices for large diameter transmission mains (greater than 12 inches). In addition, an expert panel workshop was to be held to review business needs and drivers, the performance of existing technologies, and future underground asset condition assessment research needs. Originally published by AwwaRF for its subscribers in 2004.

[Chesapeake City Public Schools](#) Jul 17 2021 After living with corruption for thirty years, one would definitely have enough. Pressured by the economic status in the 1980s, the author decided to be a technician job despite being over-qualified for it. But he had never foreseen that he was putting himself and his career into the challenge of seeing the everyday narcissism, arrogance, and despotism of the people in that public school. Knowing that he was on the right side, he always spoke for the truth and for his own virtues. He always made sure that the higher-ups were informed of the mistakes in procedures and in management. But he never expected everything to go down on him; one day, he found himself the object of collusion by the management. *Chesapeake City Public Schools: The Poster Child for Bad Government*, by Barry I. Marsh, gives an idea about, and an example of, the corruption that takes place in various levels of government. About the Author Barry I. Marsh was born in Norfolk, Virginia, but grew up in central Florida where his family stayed for ten years before moving back to Virginia. He studied to become a mechanic and worked part-time as an auto mechanics teacher at Chesapeake Center for Science and Technology. He is still working for the Transportation Department at Chesapeake Schools to this day.

More Than a Numbers Game Apr 01 2020 The world certainly suffers no shortage of accounting texts. The many out there help readers prepare, audit, interpret and explain corporate financial statements. What has been missing is a book offering context and discussion for divisive issues such as taxes, debt, options, and earnings volatility. King addresses the why of accounting instead of the how, providing practitioners and students with a highly readable history of U.S. corporate accounting. *More Than a Numbers Game: A Brief History of Accounting* was inspired by Arthur Levitt's landmark 1998 speech delivered at New York University. The Securities and Exchange Commission chairman described the too-little challenged custom of earnings management and presaged the breakdown in the US corporate accounting three years later. Somehow, over a one-hundred year period, accounting morphed from a tool used by American railroad managers to communicate with absent British investors into an enabler of corporate fraud. How this happened makes for a good business story. This book is not another description of accounting scandals. Instead it offers a history of ideas. Each chapter covers a controversial topic that emerged over the past century. Historical background and discussion of people involved give relevance to concepts discussed. The author shows how economics, finance, law and business customs contributed to accounting's development. Ideas presented come from a career spent working with accounting information.
