Education as Cultivation in Chinese Culture Jan 18 2022 Given the increasing global interest in Chinese culture, this book uses case studies to describe and interpret Chinese cultivation in contemporary Taiwanese schools. Cultivation is a concept unique to Chinese culture and is characterized by different attitudes towards teaching and learning compared to Western models of education. The book starts with a discussion of human nature in Chinese schools of philosophy and levels of goodness. Following the philosophical background is a presentation of how cultivation is practiced in Chinese culture from prenatal through high school education. The case studies focus both on how students are cultivated as they become members of Chinese society, and on what role teachers play in cultivating the children in school. In addition, supports from Chinese educational institutions, including public schools, families, and organizations such as private cram schools, are introduced and explained. In closing, the book presents a critique of the modern school reform movement and the conflicts between the reform proposals and traditional practices. Based on the collective work of Taiwanese researchers in the fields of education, history and anthropology, the book identifies the purpose of education as cultivating virtue in a process of creating an ideal person who serves society, and describes the way teachers have carried on this tradition despite its faltering status in contemporary educational discourse and in the face of reform movements.

Get Real Dec 17 2021 Finally, a book for men's spiritual development that actually starts with Jesus. Not lightly baptized Jungian archetypes. Not secular stereotypes that seek to present Jesus as a "man's man." This is good stuff. —John Ortberg Pastor, Menlo Park Presbyterian Church Author of *The Life You've Always Wanted* What exactly does it mean to be a Christian in today's world? Particularly, what does it mean to be a Christian man in 21st-century American culture? Derek Maul, an award-winning columnist and men's group leader, explores these questions in *Get Real*. The emerging 21st-century Christian man is a spiritual adventurer who's unafraid to find strength in community with others, including other men. This man rejects the phony values of society—such as the incessant desire for power, youth, money, cars, gadgets—and finds courage in Jesus' invitation: "Follow me." Maul delivers straight talk to men about faith, family, and desire for God in bite-size sections. He draws on his own experiences, including stories from his weekly men's group called *The Men's Room*. Every man can have a deeper spiritual life. Find out how to follow Jesus and leave a legacy of faith. A Leader's Guide for a 10-week group study is also available.

What reviewers are saying...

MY PET WORLD

"There aren't many books out there with 1,000 photos of dogs (and also wolves) expressing themselves. You'll see signs of mild stress, which range from a paw lift to lip licking to blinking. A yawn may simply mean a dog is tired, or indicate stress. Stretching can also be a sign of stress. Dogs are constantly communicating non-verbally. This book is a must for anyone truly interested in translating what canines are saying." **Steve Dale**

MIDWEST BOOK REVIEW

Surface and Colloid Science May 22 2022 Surface science and colloid science are preeminently experimental subjects. They constitute complementary aspects of a field which has been notably active since World War II; there is every reason to expect that the level of activity will continue to rise in the coming decades, so it is timely to review certain experimental methods of surface and colloid science as they exist, and to evaluate and refine those methods. This volume, and others that will follow, are principally concerned with experimental methods. The

working scientist needs access to the latest techniques, of course. He also needs to learn of the potentialities of recently developed techniques which he may not have been aware of. Equally important, or perhaps even more so, he needs to learn of the pitfalls of existing methods. One might say, wistfully, that it would be nice to be able to pick up somebody's description of a new piece of apparatus, to go into the laboratory, to build it, and to have it work, the first time! There is, however, a serious problem of the interaction between the experiment per se and the theory for which the experiment is designed. Very often, this interaction renders problematic the interpretation of "direct" observations. An example, from experience of the senior editor of this volume, is the question of contact angle hysteresis. (See Chapters 1 and 2.
