**Designing Templates and Formatting Documents Nov 03 2022** Aesthetics isn't the only thing that you should be striving for when you design a template. When creating technical documentation, such as user manuals and online help systems, usability, readability, and simplicity are just as crucial. The design must please the eye and at the same time communicate the content clearly. Paragraph styles and character styles should be efficient to use when writing the document. The layout process should be automated as much as possible. As user assistance documents are

frequently updated, an automated layout process is much more important here than in other kinds of books. For example, when you insert a new paragraph into a document, this shouldn't result in you having to manually tweak all subsequent page breaks-not to mention page numbers, cross-references, the table of contents, and the index. Setting up templates and style sheets that are efficient to use when creating and updating a document requires a lot of experience in technical writing. The rules presented in this book are the essence of this experience. All chapters provide various examples that you can use for inspiration and as starting points for your own designs. Topics covered: Layout basics; Setting the type area; Choosing fonts and spacing; Avoiding manual formatting; Creating semantic styles; Organizing styles hierarchically; Recommended screen layouts; Recommended page layouts; Recommended table designs; Recommended paragraph styles; Recommended character styles. Audience: technical writers, developers, marketing professionals, product managers, designers.

***Perl Template Toolkit Jan 31 2020 Among the many different approaches to "templating" with Perl--such as Embperl, Mason, HTML::Template, and hundreds of other lesser known systems--the Template Toolkit is widely recognized as one of the most versatile. Like other templating systems, the Template Toolkit allows programmers to embed Perl code and custom macros into HTML documents in order to create customized documents on the fly. But unlike the others, the Template Toolkit is as facile at producing HTML as it is at producing XML, PDF, or any other output format. And because it has its own simple templating language, templates can be written and edited by people who don't know Perl. In short, the Template Toolkit combines the best features of its competitors, with ease-of-use and flexibility, resulting in a technology that's fast, powerful and extensible, and ideally suited to the production and maintenance of web content and other dynamic document systems. In Perl Template Toolkit you'll find detailed coverage of this increasingly popular technology. Written by core members of the technology's development team, the book guides you through the entire process of installing, configuring, using, and extending the Template Toolkit. It begins with a fast-paced but thorough tutorial on building web content with the Template Toolkit, and then walks you through generating and using data files, particularly with XML. It also provides detailed information on the Template Toolkit's modules, libraries, and tools in addition to a complete reference manual. Topics in the book include: Getting started with the template toolkit The Template language Template directives Filters Plugins Extending the Template Toolkit Accessing databases XML Advanced static web page techniques Dynamic web content and web applications The only book to cover this important tool, Perl Template Toolkit is essential reading for any Perl programmer who wants to create dynamic web content that is remarkably easy to maintain. This book is your surefire guide to implementing this fast, flexible, and powerful templating system.***
