New Technology for Inclusive and Sustainable Growth Aug 30 2022 The book offers a multidisciplinary investigation into the economic, technological, environmental, and social impacts of Industry 4.0 technology that ensures inclusive and sustainable growth development of regions and countries. Along with identifying new opportunities that new technology provides for inclusive growth, the book aims to propose theoretical substantiation and develop economic, institutional, organizational, and information mechanisms that aid to reduce and eliminate the potential economic, social, and environmental risks. A broad multidisciplinary approach integrating research capabilities of economic and administrative sciences, artificial intelligence and computer sciences, pedagogy and linguistics, latest findings in the above mentioned scientific areas, as well as empirical evidence and pilot innovative research projects conducted by the contributors, allowed them to draw conclusions and develop recommendations for achieving inclusive growth in industrial and agricultural production, innovation and investment activities, management and environment protection, healthcare and education associated with the use of new technology. The contributors hope that empirical materials, innovative developments, and suggestions inspire scientific research, encourage applied studies, and supplement training programs in economic, administrative, social, and computer sciences at the advanced universities and research institutions, in the post-Soviet territory, in particular.

one major dilemma looms large for citizens and leaders worldwide: how can we ensure that our countries address these challenges successfully? This book demonstrates that the answer can be found in a better match between the nature of modern bureaucracy and the spirit of modern democracy, as well as by improving methods and ideas for what the author terms 'clever governance' and better governability. Moreover, it suggests potential directions for improving governability and public management against the backdrop of the tension between bureaucracy and democracy that has given rise to increasing mistrust of and lack of confidence in public institutions. Building Strong Nations enriches the discussion about moving modern nations forward despite major problems such as the clash of ideologies, the overburdening of and expectations from public administration, and the growing instability in world economics and international relations.

International Food Safety Handbook Dec 22 2021 Covers all aspects of food safety--science, regulation, and labeling requirements--integrating major developments in the fields of toxicology, analytical chemistry, microbiology, hygiene, and nutrition. Designed to be a reference that bridges the gaps between science, regulation and control of food safety. While this might have been a rather ambitious aim, in putting together this book, the editors have certainly succeeded in gathering a group of experts from industry, government agencies, academia, consumer groups and the media whose knowledge and expertise reflect the complex and multisectoral/multidisciplinary nature of food safety." ---Food Science and Technology

Thoracic Surgery for the Acute Care Surgeon Jun 27 2022

This volume is a “how-to guide” to treating thoracic trauma and emergencies for acute care surgeons. It highlights the diagnosis and management of thoracic disease and injuries, and each chapter includes algorithms that lead readers through the process of identifying and treating many common and some uncommon thoracic pathologies. The international team of authors provides readers with a unique and diverse approach to the operative and non-operative challenges encountered by ACS surgeons. The large number of figures offers readers insights into what they can expect to see when caring for these patients. The editors understand that the management of adults and children differ and have included a specific chapter on pediatrics. Given the broad audience and diverse settings in which the text

Neurodegeneration Jun 23 2019 Most textbooks on neurodegenerative disorders have used a classification scheme based upon either clinical syndromes or anatomical distribution of the pathology. In contrast, this book looks to the future and uses a classification based upon molecular mechanisms, rather than clinical or anatomical boundaries. Major advances in molecular genetics and the application of biochemical and immunocytochemical techniques to neurodegenerative disorders have generated this new approach. Throughout most of the current volume, diseases are clustered according to the proteins that accumulate within cells (e.g. tau, α -synuclein and TDP-43) and in the extracellular compartments (e.g. β -amyloid and prion proteins) or according to a shared pathogenetic mechanism, such as trinucleotide repeats, that are a feature of specific genetic disorders. Chapters throughout the book conform to a standard lay-out for ease of access by the reader and are written by a panel of International Experts Since the first edition of this book, major advances have been made in the discovery of common molecular mechanisms between many neurodegenerative diseases most notably in the frontotemporal lobar degenerations (FTLD) and motor neuron disease or amyotrophic lateral sclerosis. This book will be essential reading for clinicians, neuropathologists and basic neuroscientists who require the firm up-to-date knowledge of mechanisms, diagnostic pathology and genetics of Neurodegenerative diseases that is required for progress in therapy and management.

generated from wood and wood-derived fuels. Woody biomass needs to be preprocessed and pretreated before it is used for energy production. Preprocessing and pretreatments improve the physical, chemical, and rheological properties, making them more suitable for feeding, handling, storage transportation, and conversion. Mechanical preprocessing technologies such as size reduction and densification, help improve particle size distribution and density. Thermal pretreatment can reduce grinding energy and torrefied ground biomass has improved sphericity, particle surface area, and particle size distribution. This book focuses on several specific topics, such as understanding how forest biomass for biofuels impacts greenhouse gas emissions; mechanical preprocessing, such as densification of forest residue biomass, to improve physical properties such as size, shape, and density; the impact of thermal pretreatment temperatures on woody biomass chemical composition, physical properties, and microstructure for thermochemical conversions such as pyrolysis and gasification; the grindability of torrefied pellets; use of wood for gasification and as a filter for tar removal; and understanding the pyrolysis kinetics of biomass using thermogravimetric analyzers.

The Child Health Implications of Privatizing Africa's Urban Water Supply Mar 25 2022

Identifying policies which can improve water sector management is critically important given the global burden of water-related disease. Each year, 1 in 10 child deaths—roughly 800,000 in total—is the direct result of diarrhea. Can private-sector participation (PSP) in the urban piped water sector improve child health? The author uses child-level data from 39 African countries during 1986–2010 to show that introducing PSP decreases diarrhea among urban dwelling children under five years of age by 5.6 percentage points, or 35 percent of its mean prevalence. PSP also leads to greater reliance on piped water. To attribute causality, the author exploits time variation in the private water market share controlled by African countries' former colonizers. A placebo analysis reveals that PSP does not affect symptoms of respiratory illness in the same children, nor does it affect a rural control group unaffected by PSP.

[Does Private Sector Participation Improve Performance in Electricity and Water Distribution?](#) Jan 23 2022 This study examines the question of private versus public performance in a natural monopoly setting. It analyzes data from 301 utilities with private sector participation (PSP) and 926 utilities without PSP in 71 developing and transition economies to evaluate the impact of PSP on firm performance in electricity distribution and water and sanitation services. Private participation is shown to be associated with an increase in connections, labor productivity, and bill collection rates, and a decrease in employment and electricity distributional losses.

affording important breakthroughs. This emerging agenda poses new challenges for the region but also new opportunities for the field. This book aims to integrate the community of experts across the globe and the region, and to establish new challenges and developments for future investigation. We present research focused on neurodegenerative research in South America. We introduce studies assessing the interplay among genetic, neural, and behavioral dimensions of these diseases, as well as articles on vulnerability factors, comparisons of findings from various countries, and works promoting multicenter and collaborative networking. More generally, our book covers a broad scope of human-research approaches (behavioral assessment, neuroimaging, electromagnetic techniques, brain connectivity, peripheral measures), animal methodologies (genetics, epigenetics, proteomics, metabolomics, other molecular biology tools), species (all human and non-human animals, sporadic, and genetic versions), and article types (original research, review, and opinion papers). Through this wide-ranging proposal, we hope to introduce a fresh approach to the challenges and opportunities of research on neurodegeneration in South America.

Pressure and Temperature Sensitive Paints Aug 06 2020

Luminescent molecule sensors, called pressure-sensitive paint (PSP) and temperature-sensitive paint (TSP), measure factors essential for understanding the aerodynamic performance and heat transfer characteristics of flight vehicles. They provide a powerful tool for experimental aerodynamicists to obtain a deeper understanding of the rich physical phenomena in complex flows around a flight vehicle. This book helps the reader to understand the physics and chemistry and the capabilities of PSP and TSP. It provides an overview of the wide scope of applications and explains the system requirements for using these sensors. The book also includes an extensive table of properties of PTP and TSP. As such, it is a thorough and up-to-date coverage of the underlying physics and applications of luminescent molecules.

Survival for a Small Planet Jul 17 2021 Few scientific developments have given rise to as much controversy as biotechnology. Numerous groups are united in their opposition, expressing concern over environmental and health risks, impacts on rural livelihoods, the economic dominance of multinational companies and the ethical implications of crossing species boundaries. Among the supporters of the technology are those that believe in its potential to enhance food security, further economic development, increase productivity and reduce environmental pressures. As a result, countries - and sectors within countries - find themselves at odds with each other while potential opportunities for development offered by the use of biotechnology are seized or missed, and related risks go

With the most recent and relevant examples from around the world, *Trading in Genes* offers the reader a single-volume overview of the connections between biotechnology, trade and sustainability that is both wide-ranging and thorough.

The Political Economy of Publicly-provided Goods Dec 10

2020 This dissertation consists of three chapters which explore various aspects of the political economy of publicly-provided goods. I shed light on why governments do or do not invest in goods of different types, and also how government versus private provision affects consumers. What follows are three empirical analyses testing the implications of competing theoretical models. My first chapter addresses the question, what drives governments with similar revenues to publicly provide very different amounts of goods for which private substitutes are available? Key examples are education and health care. I compare spending by Brazilian municipalities on pre-primary education--a good that is also provided privately--with spending on public infrastructure like parks and roads, which lacks private substitutes. I find that municipalities with higher median income and more inequality are less likely to allocate revenue to education or to expand pre-primary enrollment. They are more likely to allocate revenue to public infrastructure. This seems to occur for two reasons. In rich and unequal municipalities, fewer total people support public education spending (the collective choice channel), and also, any given poor person wanting public education has less influence over policymakers there (the political power channel). My second chapter addresses the question, can private sector participation

(PSP) in the urban piped water sector improve child health? A fixed effects analysis suggests that the introduction of PSP decreases diarrhea among under-five children by between 2.2 and 2.6 percentage points, or 14-16%. An instrumental variables analysis that uses variation in the share of the world water market controlled by former colonizing countries suggests that the effects are twice as large. The difference between the OLS and the IV results can be explained by the fact that PSP is more likely when the water sector is distressed and causing health problems. Importantly, PSP appears to benefit the health of children from the poorest households the most. It also leads to higher rates of reliance on piped water as the primary water source, which is a likely channel explaining child health improvements. My third chapter, joint with John Hatfield, examines how competition between governments affects economic growth. We find that doubling the number of local governments in a metropolitan area increases the income growth rate over 1969-2006 by 18%, which implies an approximate \$3900 difference in 2006 income. Decomposing this effect, we find that 60% stems from inter-jurisdictional competition changing the composition of the workforce, while 40% comes from making existing workers more productive. The results support a formal model showing that competition for capital drives local governments to provide productive public goods at levels which maximize economic growth (Hatfield 2010).

Software Process Improvement and Management:

Approaches and Tools for Practical Development Jul 29 2022

Over the past decade, there has been an increase in attention and focus on the discipline of software engineering. Software engineering tools and techniques have been developed to gain more predictable quality improvement results. Process standards such as Capability Maturity Model Integration (CMMI), ISO 9000, Software Process Improvement and Capability determination (SPICE), Agile Methodologies, and others have been proposed.

Reforms in Drinking Water and Sanitation Aug 25 2019 With governments unable to cope with increasing demands for drinking water and sanitation services, private investment and community initiatives are needed to augment their efforts. However, the peculiarity of water and sanitation in terms of being basic necessities makes non-governmental participation complex. Recognizing this, the United Nations Development Programme, in consultation with the Department of Economic Affairs, Government of India, commissioned TERI to prepare a discussion paper that would develop a reform agenda for drinking water and sanitation in India. Building on the paper, this book presents a reform strategy for the drinking water and sanitation sectors in a market-oriented economy, addressing institutional, regulatory, and legislative aspects. This book is meant for professionals in municipal administration, a profession where the traditional focus is shifting from engineering- and planning-driven approaches to financial- and management-oriented ones. It is also directed at policymakers to help them appreciate the implications of economic liberalization and market-oriented policy approaches on the management of environmental infrastructure.

Water and Development Jul 25 2019 Development patterns, increasing population pressure, and the demand for better livelihoods in many parts of the globe all contribute to a steadily deepening global water crisis. Development redirects, consumes, and pollutes water. It also causes changes in the state of natural water reservoirs, directly by draining aquifers and indirectly by melting glaciers and the polar ice caps. Maintaining a sustainable relationship between water and development requires that current needs be balanced against the needs of future generations. The development community has transformed and broadened its approach to water since the 1980s. As stresses on the quality and availability of water have increased, donors have

begun to move toward more comprehensive approaches that seek to integrate water into development in other sectors. This evaluation examines the full scope of the World Bank's lending and grant support for water activities. More than 30 background papers prepared for the evaluation have analyzed Bank lending by thematic area and by activity type. IDA and IBRD (the Bank) have supported countries in many water-related sectors. The evaluation, by definition, is retrospective, but it identifies changes that will be necessary going forward, including those related to strengthening institutions and increasing financial sustainability. Lessons and results from nearly 2,000 loans and credits, and work with 142 countries are identified.

The Political Economy of Water and Sanitation Sep 26 2019

According to recent estimates, around 6,000 people - mostly children under five - die every day from diseases caused by inappropriate water and sanitation (WS) services. Much of the academic and political debate surrounding this issue has focused on private sector participation. By shifting the attention towards the influence of governance, Krause examines the political and sectoral institutions that are essential for the provision of WS services. Utilizing data from sixty-nine developing countries, Matthias Krause demonstrates that the level of democracy has a statistically significant positive impact on access to WS services and that low-quality governance of sub-national governments compromises the internal efficiency of providers and the widespread access to services. This book makes a critical contribution to the water and sanitation research and will help academics and policy-makers to rethink the way in which they deal with water issues.

The author reviews the role of alpha synuclein in the genesis of PD and covers tau protein and related diseases, MPTP and drug induced PD, oxidative stress, mitochondrial dysfunction, and apoptosis. He explores pharmacological approaches to the treatment of PD such as the use of COMT inhibitors and dopamine agonist and advances in technology such as devices that provide additional treatment options including deep brain stimulation and transplantation. The book concludes with new chapters covering the differential diagnosis of PD and related disorders.

Movement Disorders Rehabilitation Jul 05 2020 The aim of this book is to provide a comprehensive overview of the most important movement disorders and describe the rehabilitation tools available for each disease. The management of movement disorders is challenging since most of these diseases are not curable and hardly treatable. Many of the disorders are chronic or degenerative diseases, therefore patients develop motor complications that could improve with rehabilitation interventions. Movement Disorders Rehabilitation intends to serve as a practical guide on the field, attracting the interest of professionals and researchers on the fields of neurology, physical therapy, occupational therapy, speech therapy and other correlated therapies.

Along with the more obvious, albeit often misunderstood, contributions from Che Guevara and Raúl Castro, Kapcia looks at the many others who, over the decades, have been involved in decision-making and have often made a significant difference. [Physiotherapy for Adult Neurological Conditions](#) Apr 25 2022 This is a comprehensive book on physiotherapy for adult neurological disorders with chapters describing physiotherapy assessment and management for those adult patients in the acute care and rehabilitation units of hospitals or centers. Each chapter additionally provides brief introduction, historical background, etiology, pathophysiology, clinical manifestations, medical and surgical management. The aim is to help build a theoretical foundation on which principles of management are laid, and to improve and update the readers' clinical and therapeutic skills. Improving the overall care and management of patients suffering from adult neurological conditions such as stroke, Parkinson's disease, traumatic brain injury, and multiple sclerosis, is the key objective. Supported with ample practical contents (exercise training and therapeutic strategies) and pictures it prepares the readers to effectively manage patients with neurological conditions. The contents of this book will serve as a guide and source of knowledge of both contemporary and advanced treatment techniques for undergraduate and post-graduate students and therapists practicing worldwide in adult neurological physiotherapy.
