**Love, Theodosia** Jan 15 2021 A Romeo & Juliet tale for Hamilton! fans. In post-American Revolution New York City, Theodosia Burr, a scholar with the skills of a socialite, is all about charming the right people on behalf of her father—Senator Aaron Burr, who is determined to win the office of president in the pivotal election of 1800. Meanwhile, Philip Hamilton, the rakish son of Alexander Hamilton, is all about being charming on behalf of his libido. When the two first meet, it seems the ongoing feud between their politically opposed fathers may be hereditary. But soon, Theodosia and Philip must choose between love and family, desire and loyalty, and preserving the legacy their flawed fathers fought for or creating their own. Love, Theodosia is a smart, funny, swoony take on a fiercely intelligent woman with feminist ideas ahead of her time who has long-deserved center stage. A refreshing spin on the Hamiltonian era and the characters we have grown to know and love. It's also a heartbreaking romance of two star-crossed lovers, an achingly bittersweet "what if." Despite their fathers' bitter rivalry, Theodosia and Philip are drawn to each other and, in what unrolls like a Jane Austen novel of manners, we find ourselves entangled in the world of Hamilton and Burr once again as these heirs of famous enemies are driven together despite every reason not to be.

**Breath** Jan 27 2022 Tim Winton's Breath, winner of the Miles Franklin Literary Award, is a story about the wildness of youth and learning to live with its passing. When paramedic Bruce Pike is called out to deal with another teenage adventure gone wrong, he knows better than his colleague, better than the kid's parents, what happened and how. Thirty years before, that dead boy could have been him. A relentlessly gripping and deeply moving novel about the damage you do to yourself when you're young and think you're immortal. 'It's unlikely Winton has ever written as well as he writes in Breath... Its seeming simplicity is deceptive, for beneath its pared-back surfaces lies all the steel of a major novelist operating at full throttle in a territory he has spent 25 years making his own.' James Bradley, The Age 'A novelist who, to a peerless degree, has learnt how to do it... Breath seems to cut through everything, and to speak with unusual honesty.' Philip Hensher, Spectator 'An absorbing, powerful and deeply beautiful novel, a meditation on surfing which becomes a rumination about the very stuff of existence.' Helen Gordon, The Observer 'This brilliant book may well turn out to be the finest thing that Winton has done.' Andrew Riemer, Sydney Morning Herald 'Breath is about moving out of your depth, getting in over your head, having your soul damaged beyond repair ... But against all this pointless sorrow, there remains the evanescent beauty of the world, and Winton matches that with limitlessly beautiful prose.' Carolyn See, Washington Post

**How Tobacco Smoke Causes Disease** Apr 05 2020 This report considers the biological and behavioral mechanisms that may underlie the pathogenicity of tobacco smoke. Many Surgeon General's reports have considered research findings on mechanisms in assessing the biological plausibility of associations observed in epidemiologic studies. Mechanisms of disease are important because they may provide plausibility, which is one of the guideline criteria for assessing evidence on causation. This report specifically reviews the evidence on the potential mechanisms by which smoking causes diseases and considers whether a mechanism is likely to be operative in the production of human disease by tobacco smoke. This evidence is relevant to understanding how smoking causes disease, to identifying those who may be particularly susceptible, and to assessing the potential risks of tobacco products.

Sustainable Work Ability and Aging Jul 09 2020 In many industrialized countries, there is a sharp increase of the aging population due to a decrease in fertility rate and an increase in life expectancy. Due to which, the age dependency ratio rises and may cause increased economic burden among working age population. One strategy to combat this problem is to prolong peoples working career. A sufficient work ability is a requirement for a sustainable and prolonged employment. Work ability is primarily a question of balance between work and personal resources. Personal resources change with age, whereas work demands may not change parallel to that, or only change due to globalization or new technology. Work ability, on average, decreases with age, although several different work ability pathways exist during

the life course. Work-related factors, as well as general lifestyle, may explain the declines and improvements in work ability during aging. A sustainable work ability throughout the life course is a main incentive for a prolonged working career and a healthy aging. Work ability and work-related factors, are therefore important occupational and public health issues when the age of the population increases. This Special Issue, "Sustainable Work Ability and Aging", includes in all 16 original articles and one opinion paper, organized in three sections. The research topics cover wide aspects of work ability, from determinants, older employee's coping with their work, methodological issues as well as results of interventions on promoting work ability.

**The Air You Breathe** May 31 2022 "[A] glorious, glittery saga of friendship and loss... I read *The Air You Breathe* in two nights. (One might say I inhaled it.)" --NPR "Echoes of Elena Ferrante resound in this sumptuous saga." --O, The Oprah Magazine "Enveloping...Peebles understands the shifting currents of female friendship, and she writes so vividly about samba that you close the book certain its heroine's voices must exist beyond the page." -People The story of an intense female friendship fueled by affection, envy and pride--and each woman's fear that she would be nothing without the other. Some friendships, like romance, have the feeling of fate. Skinny, nine-year-old orphaned Dores is working in the kitchen of a sugar plantation in 1930s Brazil when in walks a girl who changes everything. Graça, the spoiled daughter of a wealthy sugar baron, is clever, well fed, pretty, and thrillingly ill behaved. Born to wildly different worlds, Dores and Graça quickly bond over shared mischief, and then, on a deeper level, over music. One has a voice like a songbird; the other feels melodies in her soul and composes lyrics to match. Music will become their shared passion, the source of their partnership and their rivalry, and for each, the only way out of the life to which each was born. But only one of the two is destined to be a star. Their intimate, volatile bond will determine each of their fortunes--and haunt their memories. Traveling from Brazil's inland sugar plantations to the rowdy streets of Rio de Janeiro's famous Lapa neighborhood, from Los Angeles during the Golden Age of Hollywood back to the irresistible drumbeat of home, *The Air You Breathe* unfurls a moving portrait of a lifelong friendship--its unparalleled rewards and lasting losses--and considers what we owe to the relationships that shape our lives.

**Chronic Obstructive Pulmonary Disease** Mar 05 2020 This book considers chronic obstructive pulmonary disease (COPD) not as a simple inflammation of the lung but as a systemic inflammatory disease. Beginning with epidemiological studies, etiology, diagnosis and treatment, it elaborates further, illustrating some comorbidities and associations with other respiratory diseases. As such it provides numerous improved and more comprehensive treatment methods, including drug therapies as well as some non-drug therapies. There are also chapters describing the pathogenesis, genetic abnormalities and newly discovered pathogenetic mechanisms that are expected to be studied further in the future. Edited and written by pioneering researchers, each chapter summarizes the latest trends, describes future prospects and explores the unresolved and critical questions. *Chronic Obstructive Pulmonary Disease - A Systemic Inflammatory Disease* is a valuable resource to beginning researchers, physicians engaged in clinical practice, supervisors, and basic researchers whose work includes COPD.
