Field Guide to Polarization Jan 02 2020 The polarization of light is one of the most remarkable phenomena in nature and has led to numerous discoveries and applications. The nature and mathematical formulation of unpolarized light and partially polarized light were not readily forthcoming until the 1950s, when questions about polarized light and the mathematical tools to

deal with it began to be addressed in earnest. As a result, there is a very good understanding of polarized light today. The primary objective of this guide is to provide an introduction to the developments in polarized light that have taken place over the past half-century, and present the most salient topics of the subject matter such as Mueller matrices, Stokes polarization parameters, and Jones matrices.

The Nexus: Energy, Environment and Climate Change Oct 11 2020 This book focuses on the water–energy–climate nexus, which can be used to improve energy security and quality of life for millions of people in developing countries. It enhances the reader’s understanding of the link between energy and climate, through the development of new approaches to and methods for energy generation, energy use, and climate change adaptation and resilience. By presenting case studies and research reports, the book addresses the relevant issues needed in order to analyze and successfully implement technologies in the water–energy–climate nexus. It focuses on the contributions of higher education institutions in terms of capacity-building for energy efficiency, energy access and energy security, as they relate to climate change mitigation. The book combines results from the authors’ own research with detailed analyses, and the research presented lays the foundation for innovative new concepts and ideas, which the authors subsequently discuss. The book will appeal to all those interested in the links between energy issues, sustainability and climate change, as it focuses on the exchange between science and technology experts, as well as decision makers. It also supports students studying renewable energies and energy security, while serving as a valuable reference source for researchers, professionals, practitioners and scientists.

Isotopes in the Water Cycle Jul 20 2021 Environmental isotope and nuclear techniques provide unmatched insights into the processes governing the water cycle and its variability. This monograph presents state of the art applications and new developments of isotopes in hydrology, environmental disciplines and climate change studies. Coverage ranges from the assessment of groundwater resources in terms of recharge and flow regime to studies of the past and present global environmental and climate changes.

Diversity and Evolution of Butterfly Wing Patterns Oct 30 2019 This book facilitates an integrative understanding of the development, genetics and evolution of butterfly wing patterns. To develop a deep and realistic understanding of the diversity and evolution of butterfly wing patterns, it is essential and necessary to approach the problem from various kinds of key research fields such as “evo-devo,” “eco-devo,” “developmental genetics,” “ecology and adaptation,” “food plants,” and “theoretical modeling.” The past decade-and-a-half has seen a veritable revolution in our understanding of the development, genetics and evolution of butterfly wing patterns. In addition, studies of how environmental and climatic factors affect the expression of color

patterns has led to increasingly deeper understanding of the pervasiveness and underlying mechanisms of phenotypic plasticity. In recognition of the great progress in research on the biology, an international meeting titled “Integrative Approach to Understanding the Diversity of Butterfly Wing Patterns (IABP-2016)” was held at Chubu University, Japan in August 2016. This book consists of selected contributions from the meeting. Authors include main active researchers of new findings of corresponding genes as well as world leaders in both experimental and theoretical approaches to wing color patterns. The book provides excellent case studies for graduate and undergraduate classes in evolution, genetics/genomics, developmental biology, ecology, biochemistry, and also theoretical biology, opening the door to a new era in the integrative approach to the analysis of biological problems. This book is open access under a CC BY 4.0 license.

Computer Supported Cooperative Work in Design III Dec 25 2021 This book constitutes the thoroughly refereed post-proceedings of the 10th International Conference on Computer Supported Cooperative Work in Design, CSCWD 2006, held in Nanjing, China in May 2006. Among topics covered are CSCW techniques and methods, collaborative design, collaborative manufacturing and enterprise collaboration, Web services, knowledge management, security and privacy in CSCW systems, workflow management, and e-learning.

Mechanisms of Insulin Action Jun 30 2022 More than 18 million people in the United States have diabetes mellitus, and about 90% of these have the type 2 form of the disease. This book attempts to dissect the complexity of the molecular mechanisms of insulin action with a special emphasis on those features of the system that are subject to alteration in type 2 diabetes and other insulin resistant states. It explores insulin action at the most basic levels, through complex systems.

Handbook of Research on Engineering, Business, and Healthcare Applications of Data Science and Analytics Sep 09 2020 Analyzing data sets has continued to be an invaluable application for numerous industries. By combining different algorithms, technologies, and systems used to extract information from data and solve complex problems, various sectors have reached new heights and have changed our world for the better. The Handbook of Research on Engineering, Business, and Healthcare Applications of Data Science and Analytics is a collection of innovative research on the methods and applications of data analytics. While highlighting topics including artificial intelligence, data security, and information systems, this book is ideally designed for researchers, data analysts, data scientists, healthcare administrators, executives, managers, engineers, IT consultants, academicians, and students interested in the potential of data application technologies.

Stereoselective Synthesis of Drugs and Natural Products Dec 13 2020 Brings together the best tested and proven stereoselective synthetic methods Both the chemical and pharmaceutical industries are increasingly dependent on stereoselective synthetic methods and strategies for the generation of new chiral drugs and natural products that offer specific 3-D structures. With the publication of Stereoselective Synthesis of Drugs and Natural Products, researchers can turn to this comprehensive two-volume work to guide them through all the core methods for the synthesis of chiral drugs and natural products. Stereoselective Synthesis of Drugs and Natural Products features contributions from an international team of synthetic chemists and pharmaceutical and natural product researchers. These authors have reviewed the tremendous body of literature in the field in order to compile a set of reliable, tested, and proven methods alongside step-by-step guidance. This practical resource not only explores synthetic methodology, but also reaction mechanisms and applications in medicinal chemistry and drug discovery. The publication begins with an introductory chapter covering general principles and methodologies, nomenclature, and strategies of stereoselective synthesis. Next, it is divided into three parts: Part One: General Methods and Strategies Part Two: Stereoselective Synthesis by Bond Formation including C-C bond formation C-H bond formation C-O bond formation C-N bond formation Other C-heteroatom formation and other bond formation Part Three: Methods of Analysis and Chiral Separation References in every chapter serve as a gateway to the literature in the field. With this publication as their guide, chemists involved in the stereoselective synthesis of drugs and natural products now have a single, expertly edited source for all the methods they need.

Digital Labour and Karl Marx Jun 18 2021 How is labour changing in the age of computers, the Internet, and "social media" such as Facebook, Google, YouTube and Twitter? In Digital Labour and Karl Marx, Christian Fuchs attempts to answer that question, crafting a systematic critical theorisation of labour as performed in the capitalist ICT industry. Relying on a range of global case studies--from unpaid social media prosumers or Chinese hardware assemblers at Foxconn to miners in the

Democratic Republic of Congo--Fuchs sheds light on the labour costs of digital media, examining the way ICT corporations exploit human labour and the impact of this exploitation on the lives, bodies, and minds of workers.

The Linguistics of Newswriting Sep 02 2022 The Linguistics of Newswriting focuses on text production in journalistic media as both a socially relevant field of language use and as a strategic field of applied linguistics. The book discusses and paves the way for scientific projects in the emerging field of linguistics of newswriting. From empirical micro and theoretical macro perspectives, strategies and practices of research development and knowledge transformation are discussed. Thus, the book is addressed to researchers, teachers and coaches interested in the linguistics of professional writing in general and newswriting in particular. Together with the training materials provided on the internet www.news-writing.net, the book will also be useful to anyone who wants to become a more "discerning consumer" (Perry, 2005) or a more reflective producer of language in the media.

Growth and Development in Adulthood among Persons with Intellectual Disability Apr 28 2022 This volume advocates an optimistic new conceptual and practical approach to adulthood, aging, and education for individuals with intellectual disability (ID) across the lifespan. The compensation age theory (CAT) at the heart of this book suggests that the adulthood period in populations with ID may be characterized by processes of cognitive development, growth, and neural sprouting, rather than stagnation or even decline. Empirical findings indicate the contribution of chronological age, maturity, and accumulating life experiences to adults' continued cognitive growth and intelligence, as a result of direct mediation, cognitive intervention, and academic learning as well as exposure to indirect learning. Grounded in cumulative evidence for the CAT, the book presents comprehensive analysis of a practical holistic educational intervention model for enhancing adults' Cognition (literacy), Affect (including autonomy), and Behavior (adaptive behavior skills), including operative strategies, mediational parameters, and guidance for change agents in diverse settings. This triple CAB model offers detailed tools for promoting the cognitive improvement and invigoration of adults with ID in during ADL, vocational and leisure activities, at all severity levels ranging from mild and moderate to severe and profound, across different ID etiologies including Down syndrome, and even at advanced ages for adults with ID exhibiting comorbid Alzheimer's.

The Plasma Proteins V4 Nov 23 2021 The Plasma Proteins: Structure, Function, and Genetic Control is a systematic account of the structure, function, and genetic control of plasma proteins. Advances in the characterization and posttranslational modification of plasma proteins are discussed, along with the structure of a variety of plasma proteins such as serum albumin, glycoproteins, and serum lipoproteins, and immunoglobulins. Comprised of six chapters, this volume begins with a review of progress in plasma proteins, focusing on their three-dimensional structure, characterization, and microheterogeneity as well as genetic polymorphism and chromosomal mapping. The second chapter gives a comprehensive summary of the structure of nearly 100 proteins, from serum albumin and glycoproteins to serum lipoproteins, thyroxine-binding proteins, and immunoglobulins. The reader is then introduced to human plasma proteins of unknown function, together with high-resolution two-dimensional electrophoretic mapping. The remaining chapters explore developments in the structural study of carbon hydrates; synthesis, structure, and function of the oligosaccharides of plasma glycoproteins; and the evolution of the vertebrate plasma proteins. This monograph will be of interest to molecular biologists and biochemists.

Cellular Senescence and Tumor Suppression Apr 04 2020 As cells mature they naturally stop dividing and enter a period called senescence. But cellular senescence can also be induced prematurely by certain oncogenes involved in cancer development. Cellular senescence, a growth-arrest program that limits the lifespan of mammalian cells and prevents unlimited cell proliferation, is attracting considerable interest because of its links to tumor suppression.
