New Developments in Asthma Research Apr 04 2020

Asthma is a disease that affects the lungs. It causes repeated episodes of wheezing, breathlessness, chest tightness, and night-time or early morning coughing. Tens of millions of people throughout the world suffer from asthma.

Airways are the paths that carry air to the lungs. As the air moves through the lungs, the airways become smaller, like branches of a tree. During an attack, the sides of the airways in the lungs become inflamed and swollen.

Muscles around the airways tighten, and less air passes in and out of the lungs. Excess mucus forms in the airways, clogging them even more.

The attack, also called an episode, can include coughing, chest tightness, wheezing, and trouble breathing. Environmental exposures, such as house dust mites and environmental tobacco smoke, are important triggers of an attack. This book presents important new research on the causes on asthma as well as its diagnosis and treatment.

Diesel Performance Handbook for Pickups and SUVs

Nov 11 2020 With gas prices rising (always), alternative fuels look like an answer. Hybrids sound good, but what

about the batteries? And fuel cells still seem to be pie-in-the-sky. Which leaves us with good old diesel. This book shows how to get the most out of the diesel engine, at a time when its fuel efficiency is almost as important as its massive torque. Although most diesel truck owners probably aren't planning to break any land speed records, advances in diesel technology, such as ultra-low-sulfur fuel, high-pressure common-rail fuel injection, electronic fuel management and variable geometry turbocharging, are bringing diesel engines into the performance arena. And this book is the ideal guide for

Cobra Mar 16 2021

This book tells the complex saga of a sports car that was created in the early 1960s as a result of an unlikely collaboration between a plain-talking ex-racing driver from Texas and a conservative British automobile manufacturer, funded by one of the giants of the industry, the Ford Motor Company. Carroll Shelby, AC Cars, and Ford came together to create a car called the Cobra, based on the AC Ace roadster that had been in production since 1954. When the Shelby Cobra was created, it was far from state-of-the-art, but the use of a

V8 engines saw the lightweight car annihilate the Chevrolet Corvette in American sports car racing. By adding aerodynamic bodywork, the Daytona Cobra Coupe arrived in Europe to contest the FIA World Championship and took victory in the GT category in 1965, making Shelby American the first (and only) USA-based manufacturer to achieve this feat. In order to capitalize on this success, even greater power was required and the car was developed to take a huge 7-liter engine that proved to be a triumph of horsepower over handling - thus the 427 Cobra became

an overnight legend, establishing new performance records and creating a reputation for being more than a little tricky to drive. The era of the Cobra was brief - production ended at Shelby American during 1966 and at AC Cars in 1968 where they built their own final version, the AC289 Sports. Just over 1000 Cobras were built during that time but the final cars proved difficult to sell, their vintage qualities deterring potential owners. Carroll Shelby closed his company and went to Africa while AC developed other models, but the Cobra was not quite finished yet. Within a matter of a few years, Access Free

market for the car was created as the demand for affordable kit cars grew. The most popular model by far was the Cobra and many thousands were built, with the result that both AC Cars and Carroll Shelby put their own versions back into production. And then the arguments really started... If it was an improbable car over forty years ago, it is even more implausible today, but the remarkable Cobra, in one form or another, is still with us. It may be dead, but it just won't lie down!

These processes offer promising possibilities for improving student learning, transforming educational systems, and developing robust partnerships that build on the resources, expertise, and cultural practices of non-dominant
