British Diesel Locomotives of the 1950s and '60s Jan 02 2020 After the Second World War, the drive for the modernisation of Britain's railways ushered in a new breed of locomotive: the Diesel. Diesel-powered trains had been around for some time, but faced with a coal crisis and the Clean Air Act in the 1950s, it was seen as a part of the solution for British Rail. This beautifully illustrated book, written by an expert on rail history, charts the rise and decline of Britain's diesel-powered locomotives. It covers a period of great change and experimentation, where the iconic steam engines that had dominated for a century were replaced by a series of modern diesels including the ill-fated 'Westerns' and the more successful 'Deltics'.

Marine Diesel Basics 1 Sep 29 2019 Seeing is Understanding. The first VISUAL guide to marine diesel systems on recreational boats. [Göttingen Six-component Scale Measurements on a Junkers A 35 Airplane Model](#) Jul 08 2020 The suggestion for the measurements collected in this report was prompted by the results of spinning experiments. For the theoretical spinning investigations there was a lack of data on lateral force, yawing, and rolling moment of airplanes.

[Internal Combustion Engines](#) Sep 02 2022 Internal combustion engines are among the most fascinating and ingenious machines which, with their invention and continuous development, have positively influenced the industrial and social history during the last century, especially by virtue of the role played as propulsion technology par excellence used in on-road private and commercial transportation. Nowadays, the growing attention towards the de-carbonization opens up new scenarios, but IC engines will continue to have a primary role in multiple sectors: automotive, marine, offroad machinery, mining, oil & gas and rail, power generation, possibly with an increasing use of non-fossil fuels. The book is organized in monothematic chapters, starting with a presentation of the general and functional characteristics of IC engines, and then dwelling on the details of the fluid exchange processes and the definition of the layout of intake and exhaust systems, obviously including the supercharging mechanisms, and continue with the description of the injection and combustion processes, to conclude with the explanation of the formation, control and reduction of pollutant emissions and radiated noise.

[Dictionary of Scientific and Technical Terminology](#) May 18 2021 Scientific and technical contacts between nations: have necessitated the publication of various language textbooks, manuals and reference books. Particularly important among them are multilingual scientific and technical dictionaries. This English-German-French-Dutch-Russian Dictionary of Scientific and Technical Terms contains some 9000 entries. The main feature of the Dictionary is that it includes first and foremost general scientific terms needed by an engineer working in any branch of science and technology. Besides, the Dictionary includes the basic terms used in physics, mathematics, the fundamentals of electrical engineering and chemistry, and also the most essential terms pertaining to manufacturing processes, machine design, testing methods, etc. The Compilers were confronted with a difficult task, as nowadays science and technology are developing rapidly and the minimum scientific and technical vocabulary required by a specialist is increasing accordingly. The Compilers have taken special pains to include the entire basic modern technical vocabulary, omitting superfluous words and phrases. They have tried to solve this problem by selecting mainly those scientific and technical terms which constitute the basic of a specialised vocabulary. Therefore, the Dictionary includes the vocabulary pertaining to general study courses in mathematics, physics and chemistry, and also in electrical engineering, electronics and machine design, given in technical colleges irrespective of their specification. This lends the Dictionary an «all-purpose» character, making it equally useful to scientists and engineers of different countries, who have graduated from colleges with different curricula.
