Shinran's Conversion in the Light of Paul's Conversion Apr 29 2020 Shinran (1173-1262) is the founder of the Jodo Shinshu (or True Pure Land Sect) which is said to have over thirteen million believers today. The life of Shinran was that of a pilgrim in which he gradually deepened and purified his faith in Amida Buddha. His life was marked by conversion(s), which he had existentially experienced. In studying the texts dealing with Shinran's conversion and Paul's conversion, the author has employed the hermeneutic approach taken up by Luis Alonso Schokel, Paul Ricoeur, Hans-Georg Gadamer and others. The originality of this work consists in its reading of the Buddhist and Christian texts, by following the hermeneutic approach, in order to discover some structural similarities between the two conversions.

Demystifying Opioid Conversion Calculations Oct 16 2021 Have you ever wondered if you calculated your patient's dosage correctly? Against a backdrop of the growing scrutiny of appropriate dosages, this textbook takes a fresh, new approach to helping health professionals strengthen care to and possibly save the lives of patients living with pain. This easy-to-understand and often humorous book is the most comprehensive to-date on opioid calculations for pain management and palliative care. It carefully walks clinicians through a five-step process for performing opioid conversion calculations in the real-world situations they often see. The book has case examples, simple charts and tables, and practice problems throughout on topics such as: difficult conversions for methadone, fentanyl, PCA, and neuraxial opioid therapy; conversions between routes and dosage formulations of the same opioids and different opioids; titrating opioid dosages up and down to include dosage change and timing; calculating doses for rescue opioid therapy Written by pain management expert Dr. Mary Lynn McPherson, the book gives helpful tips that practitioners should incorporate into their practices. It is a must for clinicians at all levels: hospice and palliative care physicians, physician's assistants, nurses, nurse practitioners, and pharmacists. Clinicians will come away with more confidence in doing the calculations, and higher service levels from the improvement in care.

A Natural Introduction to Computer Programming with C++ Jul 21 2019 Computer programming means that you make those machines operate so that they can perform various useful activities for you and others. The skills of computer programming are very important in our present world, and these skills are likely to become even more important in the future. On the pages of this book, the reader is introduced in a natural way to the world of computer programming. The reader does not require any previous knowledge of the subject. The basic operating principles of computers are taught before the actual studies of computer programming begin. All the examples of computer programs are written so that the reader encounters a lot of natural-language expressions instead of the traditional abbreviations of the computer world. This approach aims to make learning easier. The pages of the book are designed to maximize readability and understandability. Examples of computer programs are presented in easy-to-read graphical descriptions. Because the pages of the book are large, example programs can be presented in more reader-friendly way than in traditional programming books. In addition, pages are written so that the reader does not need to turn them unnecessarily. This book uses a programming language called C++ (pronounced "see plus plus") to teach computer programming. C++ is suitable for beginners in the field of computer programming because with C++ it is possible to make simple programs, and build a solid understanding of the basics of computing and programming. Plenty of programming exercises are included in the book. The reader can work with the exercises by using free programming tools on a personal computer. The book explains how to download the free programming tools from the Internet. This book is a new kind of book to learn computer programming. Making things clear and eliminating risks for misunderstanding have been primary concerns in the design of the book. Because in some ways the book is less mathematical than other programming books, some experienced computer programmers may hesitate to use it. However, for a beginner in the field of computer programming, this book offers a possibility to make learning easier. Also more experienced people can benefit from the book if they are prepared to discard the traditional abbreviations in computer programs, and follow the programming style that is advocated in the book.

Condominium and Cooperative Conversion: Overview hearings continued Feb 08 2021

When the State Winks Nov 17 2021 Religious conversion is often associated with ideals of religious sincerity. But in a society in which religious belonging is entangled with ethnonational citizenship and confers political privilege, a convert might well have multilayered motives. Over the last two decades, mass non-Jewish immigration to Israel, especially from the former Soviet Union, has sparked heated debates over the Jewish state's conversion policy and intensified suspicion of converts' sincerity. When the State Winks carefully traces the performance of state-endorsed Orthodox conversion to highlight the collaborative labor that goes into the making of the Israeli state and its Jewish citizens. In a rich ethnographic narrative based on fieldwork in conversion schools, rabbinic courts, and ritual bathhouses, Michal Kravel-Tovi follows conversion candidates—mostly secular young women from a former Soviet background—and state conversion agents, mostly religious Zionists caught between the contradictory demands of their nationalistic and religious commitments. She complicates the popular perception that conversion is a "wink-wink" relationship in which both sides agree to treat the converts' pretenses of observance as real. Instead, she demonstrates how their interdependent performances blur any clear boundary between sincere and empty conversions. Alongside detailed ethnography, When the State Winks develops new ways to think about the complex connection between religious conversion and the nation-state. Kravel-Tovi emphasizes how state power and morality is managed through "winking"—the subtle exchanges and performances that animate everyday institutional encounters between state and citizen. In a country marked by tension between official religiosity and a predominantly secular Jewish population, winking permits the state to save its Jewish face.
