Geek Physics Nov 20 2021 Rhett Allain writes the popular Dot Physics blog for Wired and in this book he takes a longer, smarter look at his most popular topics, from the purely fun (How much bubble wrap would you need to safely jump off a 6th floor building?) to the completely mind-boggling (Why does a mirror reverse left to right, but not top to bottom?). Allain is a physics professor and he's become very good at finding physics questions buried in the latest movie, video game, viral video or news hook. Each chapter will not only cover interesting subjects like lightsabers and McDonald's drive-thrus, but use those questions to teach readers basic physics concepts. He'll explore questions like: Is Angry Birds using real physics? Does a heavier truck make a better snow plow? What if everyone on earth jumped at the same time? How many dollar bills would it take to stack them to the moon? Often the way he gets to the answer is more interesting than the answer itself.

Why Do Onions Make Me Cry? Sep 06 2020 Discovery Channel host and acclaimed writer Jay Ingram helps you find the answers to questions you've never really settled, like "What is déjà vu?" "Why do we blink?"

"Why are yawns contagious?" and the perennial "Do we really use only 10% of our brains?" Note that this book is a combined and abridged edition of The Science of Why and The Science of Why2. Have you ever wondered if people really do weird things during the full moon? How about whether fingernails grow faster than toenails? And do we really dream in color? Jay Ingram is here to put these and many other long-lived scientific uncertainties to rest in this whimsically illustrated guide to the science of everyday life. Combining the wit of What If? by Randall Munroe and the accessible science smarts of ASAP Science, this new collection features answers to common queries with part sections that address the supernatural, the human body, the animal kingdom, the natural world, and more. It includes fun facts, myth busters and line drawings, all with the end goal of delighting and surprising your inner science geek. Whether these questions have been on your mind constantly, or occasionally resurface like the myth of Loch Ness (is it real?), whether they ' re silly (Why does my pee smell like asparagus?) or serious (Why does time speed up as I age?) or just plain frustrating (Why do mosquitoes love me?), Ingram will settle them once and for all.

Wise Church May 15 2021 "Wise Church is about rethinking church cultures so they become more of a wisdom culture. The topics vary as widely as church life itself: letter writing as pastoral care, the work life of congregants, evangelism, music, church economics, spiritual formation as the pursuit of wisdom, racial justice, marriage, learning how to teach like Jesus, gospeling like the apostles, and the wise use of social media. These studies are by pastors and scholars pondering wisdom, but more than that, they are pondering the life we all live in a wise way. We and our churches need wisdom, not simply because we live in an ever-changing world, but because the God we worship is himself wise. Wise church cultures reflect the wisdom of God back into the world, a world looking for wisdom." With contributions from: Jeff Banman Jeremy Berg Brandon Evans Pete Goodman David Johnston Ernest F. Ledbetter III Julie Murdock Joshua Little John M. Phelps Ivan Ramirez Bill D. Shiell

Disruptive Technologies for the Militaries and Security May 27 2022 This book debates and discusses the present and future of Disruptive Technologies in general and military Disruptive Technologies in particular. Its primary goal is to discuss various critical and advanced elucidations on strategic technologies. The focus is less on extrapolating the future of technology in a strict sense, and more on understanding the Disruptive Technology paradigm. It is widely accepted that technology alone cannot win any military campaign or war. However, technological superiority always offers militaries an advantage. More importantly, technology also has a great deterrent value. Hence, on occasion, technology can help to avoid wars. Accordingly, it is important to effectively manage new technologies by identifying their strategic utility and role in existing military architectures and the possible contributions they could make towards improving overall military capabilities. This can also entail doctrinal changes, so as to translate these new technologies into concrete advantages.
