Cochrane Handbook for Systematic Reviews of Interventions Oct 19 2021 Healthcare providers, consumers, researchers and policy makers are inundated with unmanageable amounts of information, including evidence from healthcare research. It has become impossible for all to have the time and resources to find, appraise and interpret this evidence and incorporate it into healthcare decisions. Cochrane Reviews respond to this challenge by identifying, appraising and synthesizing research-based evidence and presenting it in a standardized format, published in The Cochrane Library ([www.thecochranelibrary.com](#)). The Cochrane Handbook for Systematic Reviews of Interventions contains methodological guidance for the preparation and maintenance of Cochrane intervention reviews. Written in a clear and accessible format, it is the essential manual for all those preparing, maintaining and reading Cochrane reviews. Many of the principles and methods described here are appropriate for systematic reviews applied to other types of research and to systematic reviews of interventions undertaken by others. It is hoped therefore that this book will be invaluable to all those who want to understand the role of systematic reviews, critically appraise published reviews or perform reviews themselves.

**Theology of My Life** Aug 24 2019 This book is an autobiographical memoir. It tells the story of how God prepared me for the work of theology during childhood and during my schooling at Princeton, Westminster, and Yale. It focuses on those events that shaped my theological convictions and led me to develop my distinctive emphases in theology, apologetics, and philosophy. It seeks to honor God's providence in leading me from one point to another in my life as a son, husband, father, theologian, apologist, and churchman. My goal in the book is to show how one's theological convictions are products, not only of logic and reasoning, but also of the events of one's life and the people one interacts with.

**Introduction to Rubrics** Sep 05 2020 "This wonderfully compact introduction to rubrics will serve higher education teachers well [and] when departments or groups of faculty use rubrics as described in this book, they will indeed achieve the 'academic currency' sought today in higher education." -- Amy Driscoll, director of Teaching, Learning and Assessment CSU, Monterey Bay. You need rubrics if: \* You find yourself repeating the same comments on most student papers\* You worry that you're grading the latest papers differently from the first\* You're concerned about communicating the complexity of a semester-long assignment\* You question the consistency of your and your colleagues' grading scales \* Grading is taking up far too much of your valuable timeResearch shows that rubrics save professors' time while conveying meaningful and timely feedback for students, and promoting self-regulated and independent learning. The reason rubrics are little used in higher education is that few faculty members have been exposed to their use.At its most basic a rubric is a scoring tool that divides an assignment into its component parts and objectives, and provides a detailed description of what constitutes acceptable and unacceptable levels of performance for each part.Rubrics can be used to grade any assignment or task: research papers, book reviews, participation in discussions, laboratory work, portfolios, oral presentations, group work, and more.This book defines what rubrics are, and how to construct and use them. It provides a complete introduction for anyone starting out to integrate rubrics in their teaching.The authors go on to describe a variety of processes to construct rubrics, including some which involve student participation. They demonstrate how interactive rubrics -- a process involving assessors and the assessed in defining the criteria for an assignment or objective -- can be effective, not only in involving students more actively in their learning, but in establishing consistent standards of assessment at the program, department and campus level. "A valuable resource for the new user in a content discipline and belongs in every faculty developer's library." -- Edward Nuhfer, Director, Center for Teaching and Learning, Idaho State University
