Neglected Tropical Diseases and Conditions of the Nervous System Mar 29 2022 A number of diseases and conditions that occur primarily in remote rural or poor urban areas of low-income countries have traditionally been neglected by the neuroscience research community. These diseases and conditions affect the nervous system directly (sometimes with lethal consequences) and/or are associated with severe neurological sequelae such as epilepsy, cognitive deficits, and sleep disruption. Several diseases also have the effect of promoting poverty by leaving sufferers unable to lead economically productive lives due to cognitive and behavioral disturbances or severe stigmatization. The pathogenesis of neural dysfunction in the diseases addressed in this book and their sequelae remains unclear. Neuroscience of Neglected Diseases and Conditions makes available much needed information about how these diseases affect the human nervous system as well as to promote interest in further research. Further research into neglected diseases and conditions will uncover information that sheds light on more general topics of interest to the neuroscience research community.

Equine Anesthesia and Co-Existing Disease Oct 24 2021 *Equine Anesthesia and Co-Existing Disease* offers practical guidance on anesthetizing horses with pre-existing diseases or other unique conditions. Diseases and Disorders in Contemporary Fiction Apr 17 2021 The essays in this collection address the current preoccupation with neurological conditions and disorders in contemporary literature by British and American writers. The book places these fictional treatments within a broader cultural and historical context, exploring such topics as the two cultures debate, the neurological turn, postmodernism and the post-postmodern, and responses to September 11th. Considering a variety of materials including mainstream literary fiction, the graphic novel, popular fiction, autobiographical writing, film, and television, contributors consider the contemporary dimensions of the interface between the sciences and humanities, developing the debate about the post-postmodern as a new humanism or a return to realism and investigating questions of form and genre, and of literary continuities and discontinuities. Further, the essays discuss contemporary writers' attempts to engage the relation between the individual and the social, looking at the relation between the "syndrome syndrome" (referring to the prevalence in contemporary literature of neurological phenomena evident at the biological level) and existing work in the field of trauma studies (where explanations tend to have taken a psychoanalytical form), allowing for perspectives that question some of the assumptions that have marked both these fields. The current literary preoccupation with neurological conditions presents us with a new and distinctive form of trauma literature, one concerned less with psychoanalysis than with the physical and evolutionary status of human beings.
