The Strategy and Tactics of Pricing Feb 21 2022 For undergraduate introduction to Market Pricing courses. A comprehensive and practical, step-by-step guide to pricing analysis and strategy development. The Strategy and Tactics of Pricing shows readers how to manage markets strategically—rather than simply calculate pricing based on product and profit—in order to improve their competitiveness and the profitability of their offers. The fifth edition contains a new chapter on price implementation and several updated examples on pricing challenges in today's markets. Features: NEW! Show students how proper pricing can increase profitability—New Chapter on Price Implementation. A completely new chapter on implementing pricing strategy identifies the challenges involved in embedding strategic pricing principles within an organization. This chapter also describes how managers can lead a structured change process to build a more profitable commercial organization. NEW! Offer access to pricing software—Three-Month Trial of LeveragePoint Software. This edition is now available with software for creating and communicating economic value estimations systematically—from LeveragePoint Innovations Inc. While versions of this software that enable sharing require corporate contracts for access, versions for individual student and practitioner use are available without charge for three months with the purchase of The Strategy and Tactics of Pricing. NEW! Make pricing theory relative—Updated Examples of Pricing. Helping connect pricing theory to what students are familiar with, this edition includes updated examples with more topical illustrations of current pricing challenges such as: • iPhone pricing • New models for pricing music • Services pricing NEW! Present the latest information—Heavily Revised Chapters. The revised chapter on Pricing Policy provides a theoretically-grounded framework to describe specific policies for managing price changes for situations such as: -Cost-based price increases -Price reductions in a recession -Discounts The chapter on Value Creation now addresses the difference between how to consider value when it is driven by tangible monetary drivers (saving money on gas) versus the more subjective psychological drivers (doing the right thing for the environment). The chapter on Value and Price Communication has been substantially revised to describe how to communicate value in a wide variety of product and customer contexts. This chapter also demonstrates how to target communications to affect specific behaviors throughout the customer's buying process. The chapter on Price Setting has been expanded to provide a robust process for setting prices that can be widely applied to consumer and business markets.

Cost-Effective Control of Urban Smog Jan 20 2022 Containing rigorous hard evidence, this book is of immense practical use to postgraduates, researchers and business communities affected by or working in environmental regulation. The author, a leading name in the environmental economics community, examines the problem of urban smog in cityscapes and the difficulty of achieving cost-effective controls. Analyzing the key areas of urban smog, low-level ozone and volatile organic compound emissions and their impact on health and welfare of communities this text assesses and evaluates the performance of emissions trading systems and suggests alternative market designs for incentive control of pollution. Taking a well-reasoned approach to the contentious area of the use of market incentives to achieve environmental goals, it provides a study of the pioneering cap-and-trade market, particularly focusing on its poor performance in Chicago. A perfect supplementary text postgraduates and researchers, this is also an essential read for all those interested in environmental economics.

Software Telemetry Jul 22 2019 *Software Telemetry* is a guide to operating the telemetry systems that monitor and maintain your applications. It takes a big picture view of telemetry, teaching you to manage your logging, metrics, and events as a complete end-to-end ecosystem. You'll learn the base architecture that underpins any software telemetry system, allowing you to easily integrate new systems into your existing infrastructure, and how these systems work under the hood. Throughout, you'll follow three very different companies to see how telemetry techniques impact a greenfield startup, a large legacy enterprise, and a non-technical organization without any in-house development. You'll even cover how software telemetry is used by court processes--ensuring that when your first telemetry subpoena arrives, there's no reason to panic!

Complexity Management with the K-Method Sep 28 2022 The book describes the K-Method which has been developed by the authors. The purpose of the K-Method is to negotiate and administrate a complex portfolio of customised materials, all belonging to the same purchasing group (e.g. labels). The underlying idea is to agree prices for specification features, instead of giving each material an individual price based on its unique specification. By doing so, a price formula will be agreed between the buyer and supplier which even defines prices of future materials with any kind of specification.

Option Prices as Probabilities Sep 04 2020 Discovered in the seventies, Black-Scholes formula continues to play a central role in Mathematical Finance. We recall this formula. Let (B_t, F_t, P_t) note a standard Brownian motion with $B_0 = 0$, (F_t, P_t) being its natural filtration. Let $E_t := \exp(B_t)$ denote the exponential martingale associated to (B_t, F_t) . This martingale, also called geometric Brownian motion, is a model to describe the evolution of prices of a risky asset. Let, for every $K > 0$: $P_t(K) := E_t(E_t^{-K})$ (0.1) K_t and $C_t(K) := E_t(E_t^K)$ (0.2) K_t denote respectively the price of a European put, resp. of a European call, associated with this martingale. Let N be the cumulative distribution function of a reduced Gaussian variable: $x^2 y = \frac{1}{\sqrt{2\pi}} e^{-\frac{x^2}{2}}$ (0.3) $N(x) := \int_{-\infty}^x e^{-\frac{y^2}{2}} dy$. The celebrated Black-Scholes formula gives an explicit expression of $P_t(K)$ and $C_t(K)$ in terms of N : $K_t P_t(K) = KN_t + N_t^2$ (0.4) K_t^2 and $C_t(K) = KN_t + N_t^2$

House Prices and the Macroeconomy Mar 22 2022 House price bubbles, and their aftermath, have become a focus of macro-economic policy concern in most developed countries. This book elucidates the two-way relationship between house-price fluctuations and economic fundamentals. Housing has many features which make it distinct from other assets, like equity. Real estate is not only an asset but also a durable consumption good for households, providing shelter and other housing services. As a result, a house is often the largest and most important asset of households and therefore accounts for a major share of household wealth. Similarly a large share of bank assets is tied to housing values. House price fluctuations may, therefore, have a major effect on economic activity and the soundness of the financial system. Following an introductory chapter, the book is structured into three parts. The first demonstrates the importance of house prices as determinants or indicators of inflation and economic activity. The second focuses on the inter-relationships between bank credit extension and housing prices, and how bubbles can lead to financial crises. The third discusses resultant public policy issues, such as whether, and how, to include housing prices in a general inflation index, and how to restrain the housing/bank credit cycle.
