Western-trained physician Lissa Rankin, M.D. pored over hundreds of objectively evaluated, peer-reviewed studies from medical journals to find proof not just that thoughts and feelings originating in the mind can heal the body, but also that there are clear physiological mechanisms explaining how this happens ... she explains how this process works, proves with extraordinary case studies from the medical literature that it does, and teaches practical techniques you can use to activate the body's natural self-healing mechanisms, while shutting off the processes that predispose to illness. She also guides you through the process of uncovering where you might be making unhealthy choices, not just in your diet, exercise program, and sleep habits, but in your relationships, your professional life, your creative life, your spiritual life, and more-- so that you can create a customized treatment plan"--
