The Basic Problems of Phenomenology Apr 24 2022 This book provides a short introduction to Husserlian Phenomenology by Husserl himself. Husserl highly regarded his work "The Basic Problems of Phenomenology" as basic for his theory of the phenomenological reduction. He considered this work as equally fundamental for the theory of empathy and intersubjectivity and for his theory of the life-world. Further, with the appendices, it reveals Husserl in a critical dialogue with himself.

Basic Problems of Ethnopsychiatry Apr 12 2021 In these sixteen essays, written between 1939 and 1965, George Devereux argues that the understanding of all human behavior requires the application of both psychological and sociocultural methods of explanation. This unique approach, which differentiates sanity and insanity from social adjustment and maladjustment, provides a rigorous foundation for a general theory of psychoanalytic ethnopsychiatry. George Devereux, a psychoanalyst and anthropologist, discusses crime, sexual delinquency, dreams in non-Western cultures, and cannibalistic drives of parents. He frequently cites case material from his extensive field work with the Mahave Indians of Arizona and the Sedang Moi of Vietnam and from his clinical work with non-Western patients.

The Two Fundamental Problems of Ethics Oct 19 2021 Arthur Schopenhauer's *The Two Fundamental Problems of Ethics* (1841) consists of two groundbreaking essays: 'On the Freedom of the Will' and 'On the Basis of Morals'. The essays make original contributions to ethics and display Schopenhauer's erudition, prose-style and flair for philosophical controversy, as well as philosophical views that contrast sharply with the positions of both Kant and Nietzsche. Written accessibly, they do not presuppose the intricate metaphysics which Schopenhauer constructs elsewhere. This is the first English translation of these works to re-unite both essays in one volume. It offers a new translation by Christopher Janaway, together with an introduction, editorial notes on Schopenhauer's vocabulary and the different editions of his essays, a chronology of his life, a bibliography, and a glossary of names.

Basic Questions of Philosophy Mar 24 2022 First published in German in 1984 as volume 45 of Martin Heidegger's collected works, this book is the first English translation of a lecture course he presented at the University of Freiburg in 1937–1938. Heidegger's task here is to reassert the question of the essence of truth, not as a "problem" or as a matter of "logic," but precisely as a genuine philosophical question, in fact the one basic question of philosophy. Thus, this course is about the essence of truth and the essence of philosophy. On both sides Heidegger draws extensively upon the ancient Greeks, on their understanding of truth as *aletheia* and their determination of the beginning of philosophy as the disposition of wonder. In addition, these lectures were presented at the time that Heidegger was composing his second magnum opus, *Beiträge zur Philosophie*, and provide the single best introduction to that complex and crucial text.

Understanding the Book of Amos Jul 24 2019 An explosion of scholarly treatments of the book of Amos leaves one wondering: What do we know for sure about the prophet, his time, and his writing? Gerhard Hasel synthesizes the latest rethinking of the prophet's vocation, background, purpose, themes, and motifs to explain why Amos is "a microcosm for the study of all the prophetic writings of the Old Testament." The most extensive bibliography on Amos ever compiled enables further study.

The Fundamental Problems of Western Metaphysics Aug 05 2020 This book introduces profound reflections of Xavier Zubiri (1898-1983) on the history of philosophy to English-speaking audiences. Atlantis Oct 07 2020 A Soviet scientist examines geology, climate, oceanography and attempts reconstruction of Atlantis. Illustrated with maps, charts, tables, illustrations, seismic data, sonar images, etc. The fascinating age-old riddle of the legendary continent of Atlantis is a challenge to any investigator for it would be hard to name a problem of longer standing or one that has given rise to sharper controversies and differences of views and opinions. Some investigators have rejected it as a key to an ancient riddle throwing light on many aspects of human history and civilization. Thousands of books and papers have been devoted to the thrilling problem of Atlantis, and a new scientific trend, atlantology, studying Atlantis has emerged. Atlantology cannot advance without the aid of geomorphology and marine geology, which are relatively new spheres of human knowledge. Indeed, the problems linked up with Atlantis can be approached successfully only by drawing upon the latest achievements of world science in the study of the geological structure and relief of the ocean bed, only in the light of the new ideas about the youth and active development of oceans. The author believes that Atlantis existed and uses a great number of facts to back up his arguments. His work sums up much on what we know about atlantology. This book will unquestionably serve as the basis for elaborating on many aspects of one of the world's most dramatic problems. Zhironov was a chemist by trade and a leading Soviet Atlantologist. The book was written between 1959-63. New data was added for this English edition. Seismics, gravimetrics, climatology, paleobotanical data, geomorphology, plate tectonics, turbidity data, bottom current patterns, submarine erosion and geological data separate this book from most of the rest of the Atlantology field. Derrida and Husserl Jul 16 2021 "[A] magnificent work... that will definitely shape the discussion on Derrida for years to come." -- Rodolphe Gasché What is the nature of the relationship of Jacques Derrida and deconstruction to Edmund Husserl and phenomenology? Is deconstruction a radical departure from phenomenology or does it trace its origins to the phenomenological project? In *Derrida and Husserl*, Leonard Lawlor illuminates Husserl's influence on the French philosophical tradition that inspired Derrida's thought. Beginning with Eugen Fink's pivotal essay on Husserl's philosophy, Lawlor carefully reconstructs the conceptual context in which Derrida developed his interpretation of Husserl. Lawlor's investigations of the work of Jean Cavaillès, Tran-Duc-Thao, and Jean Hyppolite, as well as recent texts by Derrida, reveal the depth of Derrida's relationship to Husserl's phenomenology. Along the way, Lawlor revisits and sheds light on the origin of many important Derridean concepts, such as deconstruction, the metaphysics of presence, différance, intentionality, the trace, and spectrality.

It presents an innovative approach to logic and quantitative reasoning (without advanced mathematics) that delivers valuable results ---- convincing solutions to these problems. Readers in finance will definitely be interested in these solutions as well as the methods. In fact, these fundamental problems are essential in the field of finance, and they have remained unsolved (or partly unsolved) for decades. The solutions offered in this book are all sound in theory and feasible in practice, and will hopefully benefit both theoretical research and practical decision-making.

This lively and lucid book provides an introduction to the essential phenomenological concepts that are crucial for understanding great thinkers such as Husserl, Heidegger, and Merleau-Ponty. Written by a leading expert in the field, Dan Zahavi examines and explains key questions such as: • What is a phenomenological analysis? • What are the methodological foundations of phenomenology? • What does phenomenology have to say about embodiment and intersubjectivity? • How is phenomenology distinguished from, and related to, other fields in philosophy? • How do ideas from classic phenomenology relate to ongoing debates in psychology and qualitative research? Capabilities Equality May 02 2020 The capabilities approach to equality, developed by Amartyr Sen and Martha Nussbaum, seeks to answer the question: what is a proper measure of a person's condition for the purposes of determining what we owe each other, as a matter of justice? While the capabilities theory has avoided many of the conceptual difficulties that have undermined competing accounts of egalitarian justice, recent criticisms have raised questions regarding the focus, structure and justification of the theory. In this volume, leading scholars present new and original essays that address these controversies.

The Two Fundamental Problems of the Theory of Knowledge Jun 26 2022 In a letter of 1932, Karl Popper described Die beiden Grundprobleme der Erkenntnistheorie – The Two Fundamental Problems of the Theory of Knowledge – as '...a child of crises, above all of ...the crisis of physics.' Finally available in English, it is a major contribution to the philosophy of science,

epistemology and twentieth century philosophy generally. The two fundamental problems of knowledge that lie at the centre of the book are the problem of induction, that although we are able to observe only a limited number of particular events, science nevertheless advances unrestricted universal statements; and the problem of demarcation, which asks for a separating line between empirical science and non-science. Popper seeks to solve these two basic problems with his celebrated theory of falsifiability, arguing that the inferences made in science are not inductive but deductive; science does not start with observations and proceed to generalise them but with problems, which it attacks with bold conjectures. *The Two Fundamental Problems of the Theory of Knowledge* is essential reading for anyone interested in Karl Popper, in the history and philosophy of science, and in the methods and theories of science itself.

Ibuanyidanda (complementary Reflection) and Some Basic Philosophical Problems in Africa Today Sep 17 2021 This book gives an insightful account of how some fundamental phenomena and mechanisms control human consciousness, impacting the way we think, will, and act. The book identifies these phenomena and mechanisms as the *mkpuchi anya*, the super-maxim, and the inherently tension-laden ambivalent character of our experience of reality. It re-examines fundamental problems of philosophy from the perspective of *ibuanyidanda* (complementary reflection) and how the problems reappear in the way philosophy is conducted in Africa today.
