Attachment Issues in Psychopathology and Intervention Nov 02 2020 To be a human being (or indeed to be a primate) is to be attached to other fellow beings in relationships, from infancy on. This book examines what happens when the mechanisms of early attachment go awry, when caregiver and child do not form a relationship in which the child finds security in times of uncertainty and stress. Although John Bowlby, a psychiatrist and psychoanalyst, originally formulated attachment theory for the express purpose of understanding psychopathology across the life span, the concept of attachment was first adopted by psychologists studying typical development. In recent years, clinicians have rediscovered the potential of attachment theory to help them understand psychological/psychiatric disturbance, a potential that has now been amplified by decades of research on typical development. Attachment Issues in Psychopathology and Intervention is the first book to offer a comprehensive overview of the implications of current attachment research and theory for conceptualizing psychopathology and planning effective intervention efforts. It usefully integrates attachment considerations into other frameworks within which psychopathology has been described and points new directions for investigation. The contributors, who include some of the major architects of attachment theory, link what we have learned about

attachment to difficulties across the life span, such as failure to thrive, social withdrawal, aggression, anxiety, depression, bipolar disorder, dissociation, trauma, schizo-affective disorder, narcissistic personality disorder, eating disorders, and comorbid disorders. While all chapters are illuminated by rich case examples and discuss intervention at length, half focus solely on interventions informed by attachment theory, such as toddler-parent psychotherapy and emotionally focused couples therapy. Mental health professionals and researchers alike will find much in this book to stimulate and facilitate effective new approaches to their work.

Discussions on Ego Identity Mar 18 2022 Identity has been a topical issue in both popular and social science literatures for the past forty years. The writings of Erik Erikson on the identity formation process of late adolescence have provided an important theoretical foundation to clinical, counseling, and educational practices. As the literature on adolescent development has burgeoned over the last three decades, so have efforts to understand, more systematically, the means by which young people find their occupational, religious, political, sexual and relational roles in life. One of the most popular research traditions to spring from Erikson's clinical observations has been the ego identity status approach developed by James Marcia. This approach has expanded Erikson's concept of identity to describe four distinct styles by which adolescents and adults deal with identity-defining issues. The present volume reflects the most recent efforts of social scientists who have contributed further to the work that Erikson and Marcia began -- an exhaustive analysis of the issues inherent in the adolescent identity formation process.

Evaluating and Promoting Positive School Attitude in Adolescents Apr 07 2021 At a time when rates of depression and other mental health problems are increasing significantly among high school students, measures of school attitude and well-being are of central importance to school practitioners. Students with positive attitudes about school experience more beneficial outcomes and are also less likely to engage in maladaptive, risky behaviors. Therefore, monitoring how students feel about their experiences at school is important, and a novel, fresh approach to examining school attitude is sorely needed. Past studies of school attitude have generally focused on internal, psychological correlates of school attitude, such as individual and subjective reports of students' attitude toward school and their motivation levels. *Evaluating and Promoting Positive School Attitude in Adolescents* goes beyond these traditional measurements and explores less psychologically focused indicators, including ecological factors and observable behaviors. This study provides school psychologists with a new, comprehensive, and ecologically based approach with which to evaluate the school attitude of high school students.

Adolescent Health Dec 23 2019

Adolescence, Affect and Health (PLE:

Emotion) Jun 09 2021 Originally published in 1999, this title covers the entire empirical cycle in adolescent health research and education. It describes in depth the development and evaluation of a health education programme designed to enhance everyday health-related behaviours in an adolescent population, and offers comprehensive reviews of developmental theories of adolescence, ethical and theoretical issues in adolescent health education, and the major theories used in adolescent health research. The research presented here led to the development and testing of a new theory - the Theory of Salient Meanings of Behaviour - which departed from the cognitive theories that had thus far dominated adolescent health education and research, but which had often proved inadequate in describing and predicting adolescent health-related behaviour. The inception, growth, testing, and field testing of this new theory are traced here. The book is designed to appeal to both theoretical and applied scientists in the field of adolescent development, adolescent health and health education. A clear research methodology is set out for the complementary use of a wide range of qualitative and quantitative research methods.

Studying Minority Adolescents Oct 01 2020 In the burgeoning research literature on adolescents, the relative paucity of work examining ethnic variations in developmental processes is a glaring gap, particularly because approximately one third of American young people now come from an ethnic minority background. A primary factor in this research imbalance has been the lack of training in methods and research instruments needed to properly study ethnically diverse populations. This book was developed in response to this need. Its chief objective is to present recent theoretical, conceptual, and methodological advances in the study of ethnicity and development during adolescence. The chapters address fundamental and enduring issues concerning the incorporation of ethnicity into research designs. Topics such as demographics, "ethnicity-friendly" research paradigms, and practical challenges that arise throughout the research cycle are addressed by scholars who have "been there" and learned how to successfully study the effects of race and ethnicity on developmental processes and outcomes. Established scholars and newcomers to research, working both in academic and applied settings with adolescents as their focus, will find this book a valuable resource.
