Flying in the Face of Criminalization Dec 10 2020 Two parallel investigations take place after every aviation accident: one technical, one judicial. The former must be conducted with the sole intention of making safety recommendations to prevent the recurrence of similar accidents. The judicial investigation, however, has the intention of identifying those parties that have been at fault and to apportion blameworthiness for criminal and civil liability. Consequently, this results in a predicament for those parties that have been identified as having played a role in the accident, a dilemma between not supplying information aimed at enhancing safety and preventing future accidents and, on the other hand, supplying such information which may possibly be used against them in subsequent criminal prosecution. The situation is compounded by inconsistent approaches between different legal systems; aviation professionals may find themselves faced with criminal charges in one country but not in another, and they may also be unsure as to whether statements given during the technical investigation could be used against them in a court of law. Aviation safety is, to a large extent, built upon the trust placed by pilots, ATCOs and other aviation professionals in the process of accident investigation. This book examines the growing trend to criminalize these same people following an accident investigation and considers the implications this has for aviation safety.

Language Skills Feb 09 2021 This volume brings an international perspective to language skills - an area of importance to both theorists and practitioners in all contexts of language teaching and learning. The twenty-seven chapters included here are arranged into six sections devoted to fundamental background issues, spoken interaction, perception of speech sounds and production skills, reading contexts and purposes, writing challenges for advanced learners, and technology and language skills. Explored themes range from the conceptualization of language as skill and the development of L2 skills in communicative and intercultural approaches, through challenges in teaching specific skills and their components, to the consideration of the possibilities and limitations of the use of modern technology in assisting students in skill acquisition. The volume's contributors point to the multiaspectuality of the process of developing language skills with reference to different age groups, diverse educational and social contexts, as well as instructional activities focusing on isolated and integrated skills. The book also includes original empirical studies concerning learning, teaching, and testing numerous aspects of language skills in L2 attainment.
